## 1. Introduction

#### 1.1 Applicant

Sydney Ports Corporation (Sydney Ports) is the applicant for the proposed Intermodal Logistics Centre (ILC) at Enfield.

#### **1.2 Background to the Project**

Container trade at Port Botany has been growing at an average rate of about 7.4% per year and is forecast to grow by about 5% per year over the next 20 years, reaching over 3 million  $TEU^1$  per year by 2025. Currently, trucks move over 75% of containers to and from Port Botany and, as the volume of containers grows, it will be necessary to increase the use of rail to moderate growth in truck traffic and assist in the efficient transfer of containers to and from the port.

To date, rail has been an under-utilised resource for transporting freight. Both the Federal and State Governments have recognised the economic, environmental and social advantages of using rail and are endeavouring to promote the increased usage of rail for transporting freight. This has been recently reinforced in the first stage of the NSW Government's Port Freight Plan which aims to increase the proportion of containers transported to and from Port Botany by rail to 40% by 2011.

The future development of intermodal facilities in the Sydney Metropolitan Area has been identified as being vital to improving the efficiency of land transport and supporting efficient port operations in Sydney. Intermodal terminals will facilitate greater use of rail transport and provide for the efficient distribution of containers to and from Port Botany, thus ensuring that Port Botany remains competitive and that trade, and therefore economic growth in NSW, is not inhibited.

One of the key elements of Sydney Ports' strategy to facilitate rail for transporting freight is the establishment, at the former Enfield Marshalling Yards, of an Intermodal Logistics Centre linked by dedicated freight rail access to Port Botany. This development will contribute to the existing and future network of intermodal facilities to enable Sydney to provide an efficient and reliable freight transport system in the future.

Sydney Ports considered the former Enfield Marshalling Yards as a suitable site for the construction of an intermodal terminal and, following the construction of the new marshalling yards, purchased the remaining site progressively between 2001 and 2003. The establishment of an Intermodal Terminal at this location was part of Sydney Ports' strategy for responding to the predicted growth in container trade at Port Botany.

An EIS for a 500,000 TEU intermodal terminal on the Sydney Ports' land was commenced in late 2001, with a Planning Focus Meeting held in September 2001 and Director-General's Requirements issued by the (then) Department of Urban Affairs and Planning (DUAP) in October 2001.

<sup>&</sup>lt;sup>1</sup> One TEU is equivalent to one twenty-foot container. A forty-foot container is equivalent to two TEU.

Preparation of the EIS was suspended in March 2002 when it was announced that the proposed intermodal terminal would be subject to an independent review by the Hon Milton Morris AO. Conclusions and recommendations from this review were released in February 2003 and included the following:

- The proposed 500,000 TEU intermodal terminal was too large for the site; and
- The NSW Government should conduct a major reassessment of intermodal demand and potential sites. This work should see the development of intermodal sites across Sydney within the next decade as its primary consideration.

Since the outcomes of the independent Milton Morris (2003) review, the NSW Government has continued to reinforce the need to move more freight by rail. As a result, Sydney Ports has revised its Intermodal Terminal proposal. It now proposes a more integrated site development, consistent with the Port Freight Plan and the recently released Freight Infrastructure Advisory Board (FIAB) Report, based around a smaller intermodal terminal linked to on-site empty container storage facilities and port related warehousing, more commonly referred to as an Intermodal Logistics Centre (ILC).

#### 1.3 Preferred Project Report

An Environmental Assessment (EA) report was prepared for the proposed ILC to meet the requirements of the *Environmental Planning and Assessment Act*, 1979 (EP&A Act) and the *Environmental Planning and Assessment Regulation*, 2000 (EP&A Regulation).

Pursuant to the EP&A Regulation, the EA was lodged with the Department of Planning (DoP) on 14 December 2005 (Application No 05\_0147) and was placed on public exhibition by DoP on 9 January 2006.

Following exhibition of the EA, copies of all submissions were provided to Sydney Ports and relevant Government authorities. Sydney Ports has reviewed the submissions and this report (the Preferred Project Report) considers and responds to issues raised, including the need or otherwise to modify the proposal.

#### 1.4 Assessment of Proposal

DoP will prepare an assessment report on the proposed ILC at Enfield which will take into account comments from the relevant Government authorities and the Preferred Project Report provided by Sydney Ports. The assessment report will be provided to the Minister for Planning, who will make a decision on approval and conditions in accordance with the EP&A Act.

On 15 February 2006 the Minister for Planning directed that an independent panel of experts be established into the proposed Intermodal Logistics Centre at Enfield. The Minister specified terms of reference for the Panel and directed the Panel to conduct meetings and make such other enquiries as are necessary in relation to the relevant aspects of the project stipulated in the Panel's terms of reference. A copy of the Preferred Project Report will be provided to the Panel for its consideration.

## 2. Project Description

#### 2.1 Project as described in Environmental Assessment Report

The proposed Intermodal Logistics Centre at Enfield would be used for the transfer and storage of container freight to and from Port Botany, packing and unpacking of containers within the proposed warehouses and storage of empty containers for later re-use or for return to the Port. These elements were described in detail in Chapter 4 – Project Description of the EA (November 2005). In brief, the ILC at Enfield comprises:

- An Intermodal Terminal for the loading and unloading of containers between road and rail and short term storage of containers;
- Warehousing for the packing and unpacking of containers and short-term storage of cargo;
- Empty Container Storage Facilities for the storage of empty containers for later packing or transfer by rail;
- A Light Industrial and Commercial Area for light industrial and/or commercial use, preferably complementary to operations at the ILC. The area would also act as an interface to adjacent uses along Cosgrove Road;
- A Community and Ecological Area to provide the opportunity to incorporate ecological enhancement and community opportunities. The area would also serve as a buffer between operations on the site and residences to the south of the site; and
- Off site works comprising construction of a road bridge over the existing new Enfield Marshalling Yards for access to Wentworth Street, works on Cosgrove Road to manage access/egress of vehicles to/from the site, and rail connections to the freight rail network.

#### 2.2 Modifications to the Proposal

Having reviewed submissions from the community, local government and State government agencies, and considered the proposal in the light of those submissions, Sydney Ports intends to construct and operate the proposed ILC, as outlined in Chapter 4 of the Environmental Assessment, with the following changes:

- The intersection at Norfolk Road /Roberts Road will be upgraded to RTA design requirements;
- Traffic control measures will be provided to manage articulated or B Double truck traffic leaving the ILC via the Cosgrove Road exit during am/pm peak periods;
- Extra noise barriers (a fence structure approx 350m long and 2m high, comprising double sided metal cladding) on top of the eastern noise mound will be provided along the Cosgrove Road alignment behind the Light Industrial / Commercial Area.

Reference has been made to the provision and operation of a public address system on the site. This system will now not be used at night (10pm to 6am).

## 3. Responses to Environmental Assessment Report

#### 3.1 Submissions Received

The total number of submissions received and registered by the Department of Planning (DoP) was 329. These submissions were passed to Sydney Ports for its review and as input to the Preferred Project Report.

Submissions have been categorised by Sydney Ports as follows:

- Community (these are summarised in Appendix A)
  - Submissions from individuals or organisations 108 submissions
  - Form Letter Submissions
    - Submissions form letter 1
       46 submissions
    - Submissions form letter 2
       4 submissions
    - Submissions form letter 3 3 submissions
    - Submissions form letter 4
       3 submissions
    - Submissions form letter 5 126 submissions
  - Petitions (4)
    - The Residents of Hankins Court, Chullora (12 signatures);
    - The Residents of Boronia Rd Greenacre (52 signatures);
    - The Proprietors of Strata Plan 14198 Barremma Rd Lakemba (11 signatures);
    - On behalf of the residents of Railway Rd and Unwins Bridge Rd, Sydenham (23 signatures).
- Councils (summarised in Appendix B)
  - Marrickville City Council;
  - Canterbury City Council;
  - Bankstown City Council two submissions received;
  - Strathfield Council two submissions received (the second was a separate Council submission to the FIAB report). There were also submissions from The Mayor and two Councillors. These are registered under individual submissions, not those of Council.
- NSW Government agencies/departments (summarised in Appendix C)
  - Department of Environment and Conservation
  - NSW Health
  - Ministry of Transport (2 submissions)
  - NSW Heritage Office

- RailCorp
- Department of Natural Resources
- Roads and Traffic Authority (3 letters).
- Industry (summarised in Appendix D)
  - CBFCA Australia
  - Shipping Australia Limited
  - CFCL Australia P/L
  - Weston Cereal Industries
  - MIST
  - State Chamber of Commerce
  - Walker Corporation
  - Infrastructure Partnerships Australia
  - NSW Road Transport Association Inc
  - Property Council of Australia.

#### 3.2 Assessment of Submissions

Submissions were assessed as follows:

- Submissions were registered by DoP and passed to Sydney Ports;
- Details of each submission were entered into a data base;
- Issues were reviewed for the sufficiency of the EA information and whether additional information was needed for clarification;
- Each question or category of question was answered in the data base;
- Any new work required to answer the question was undertaken; and
- Responses were collated for input to this PPR.

#### 3.3 Issues raised in Submissions

All submissions were reviewed and issues raised in each were placed in Issue Categories. The Issue Categories were derived during the consultation process and attempted to reflect the main areas of interest or concern to community members. It should be noted that inevitably there is some overlap of issues in different categories. Table 3-1 summarises the Issue Categories and the number of submissions that raise that Issue Category.

#### Table 3-1: Summary of Issues Raised

| Issue Category Raised    | Number of times raised | Details of Issues                                                |
|--------------------------|------------------------|------------------------------------------------------------------|
| Air Quality              | 48                     | Construction dust                                                |
|                          |                        | Effects of increased road traffic                                |
|                          |                        | Locomotive emissions                                             |
| Alternative uses of site | 1                      |                                                                  |
| Alternative sites        | 151                    | Locate ILC elsewhere                                             |
| Amenity, quality of life | 175                    | Noise                                                            |
|                          |                        | Traffic                                                          |
|                          |                        | Sleep disturbance                                                |
| Approval processes       | 2                      | Rail access                                                      |
|                          |                        | Road access to site                                              |
| Consultation process     | 198                    | Lack of consultation                                             |
|                          |                        | No information for people of NESB                                |
|                          |                        | Limited time for making submissions                              |
| Community and ecological | 6                      | Access                                                           |

#### 3.4 Key issues

As noted in Table 3-1, the key issues raised by submissions were:

- Project justification (need for the project) and consideration of alternative locations for the proposal;
- Alternative uses for the site, including industrial opportunities and site qualities;
- Traffic issues, primarily intersection performance and network capacity. Other issues raised under traffic relate to the potential impacts from increased traffic, especially trucks and include noise, safety, air quality and general amenity. These are discussed in separate sections below;
- Noise derived from construction works and site operation (especially at night), as well as road traffic noise due to truck movements. Noise from rail movements is addressed in Rail Operational Issues;
- Air quality derived from construction works (dust) and increased truck movements in local streets. Air quality from rail movements is discussed in Rail Operations;
- Rail operational issues, relating to the performance of freight on the rail network between Port Botany and Enfield. Particular concerns were noise and air quality from the rail movements and the movement of rail throughout the night;
- Pollution. This related primarily to noise and air impacts from traffic. Light spill was identified as being of concern to many. Air and noise are addressed elsewhere, so this section will concentrate on light spill;
- Amenity and quality of life. This is generally related to problems of increased traffic through the streets and associated noise and safety. Sleep disturbance and light spill were also important considerations;
- Property impacts, primarily reduction in house values due to the proposed works;
- Land use, dealing with the proximity of residential land uses to the site;
- Consultation process, mainly relating to a lack of consultation throughout the project, the timing of the exhibition over the summer holidays and the limited time available for submissions to be provided in response to the EA;
- Approvals and EIS process;
- The community and ecological area;
- Flora and fauna and ESD;
- Site soil contamination;
- Site design and management;
- Drainage and Hydrology;
- Heritage and archaeology, including the use of the Tarpaulin Shed;
- Socio-economic issues. Issues associated with amenity were addressed separately. This section deals primarily with economic benefits and employment.

#### 3.4.1 Project Justification (Need and Alternatives)

#### **Issues Summary**

Submissions concerned themselves with the role of an ILC at Enfield in the context of the proposed intermodal network (as outlined in the FIAB study) and the NSW Government's policy of putting 40% of Port Botany container freight on rail.

Submissions suggested that the proposed Enfield ILC is not in the centre of the market that it serves, and the reality is that the Enfield site is at the western end of the "neck of a funnel" 18 km long, the market referred to being predominantly to the west of the chosen site. It was suggested it would appear to be far more beneficial to locate an Intermodal Logistics Centre further west, to service the actual centre of the market, thereby utilising rail for a greater proportion of the overall transport task. It was suggested that the proposed site would merely transfer road network access from a point of congestion at Foreshore Road and General Holmes Drive to an alternatively congested part of the road network at Enfield.

In particular, Strathfield Council indicated the following: "Whilst it is understood and accepted that a significant increase in cross-metropolitan rail freight movement is necessary to cater for anticipated growth for the future, it is questionable if Enfield is the most suited location to achieve this. The Operation Terminal should be closer to the containers final destination by rail. Serious consideration should be given to a "Sydney Wide" Intermodal based at Ingleburn that is closer to the documented final destination of all freight. It also has heavy rail facilities and a number of motorway options. This in my opinion would prove to be more cost effective and would provide a quality logistic infrastructure, with long-term expansion for the Sydney Basin."

A number of submissions were concerned with the location of the ILC at the specific site in Enfield. It was argued that Enfield is unsuitable site/location for an intermodal logistics terminal to be built due to its close proximity to residential areas and to the compounding of already existing traffic congestion in the area. It was noted that current access to all freeways and motorways requires heavy vehicles passing residential areas. These include the M4, M5 and the recently opened M7. It was argued that a site location further to the west of Sydney would provide a more direct access to the motorways with minimum disruption.

#### Response

The need for the project and the choice of the existing site at Enfield were outlined in detail in Chapter 3 of the EA. This was outlined in the context of the need for a network of intermodal terminals servicing Sydney, as specified in the Milton Morris Report into the previous proposal at the site. Enfield is considered to support the development of this network, and is a suitable site for providing a distribution network for container imports and exports whose origin or destination is in the inner and middle western suburbs of Sydney. Chapter 3 of the EA identified that the inner and middle western area of Sydney (in which the proposed ILC is located) receives up to 56% of the incoming container traffic through Port Botany and is the origin for export of over 23% of container traffic destined for Port Botany. This

market comprises about 700,000 to 800,000 TEU per year. The development of the ILC will provide the opportunity for 300,000 TEU to be brought into and out of the area by rail (instead of by truck).

The need for the network of intermodal terminals has since been supported by the release of the Metropolitan Strategy and within it the Transport Strategy for Sydney. The strategy confirms the metropolitan freight strategy for import and export containers and reiterates the Government target of increasing rail's share of these containers movements to 40 percent by 2011. It acknowledges the need for significant upgrading of existing intermodal terminal infrastructure and new, larger scale road/rail intermodal terminals to provide sufficient capacity to allow the rail mode share target to be achieved. It identifies actions undertaken and proposed to achieve this. One such action was the release of the Freight Infrastructure Advisory Board (FIAB) final report - *Railing Port Botany's Containers*- which outlines a number of recommendations to help develop the planning for port freight movements in Sydney. As noted in the EA, the proposed ILC at Enfield is an important component in the FIAB report.

The development of the ILC will provide the opportunity for 300,000 TEU to be brought into and out of the area by rail (instead of by truck). It should be noted that every 50,000 TEU throughput processed through the ILC results in a saving of 41,000 truck movements between Port Botany and Enfield, and a saving of 16,000 truck movements from Port Botany to the final origin/destination within the ILC market area. That is, any reduction in throughput below 300,000 TEU will result in more trucks on the road within the ILC market area.

The site of the ILC at Enfield is the most appropriate site to service the inner and middle western Sydney catchment for the following reasons:

- The site is available and located within an existing operational industrial precinct with excellent access to two main arterial roads;
- The site and its surrounds have a history of and are currently used for road and rail purposes;
- The site is located at a suitable distance from the port, such that the ILC is a competitive alternative to the all truck delivery option between Port Botany and its final destination within the market area;
- The ILC site is located close to the geographical centre of the Sydney Basin (40km radius from Port Botany) where 85% of all containers from the Port are delivered;
- Sydney Ports Corporation has not found any other site that could service the inner and western Sydney market in a better location (serviced by dedicated freight rail and two main arterial roads), for less cost (given the heavy investment in infrastructure required for potential downstream intermodal locations), with a willing proponent and available for development to assist the NSW Government's objective of increasing the proportion of containers moved by rail to 40% by 2011.

As identified in the Metropolitan Strategy and the FIAB report a number of other intermodal terminals are proposed close to the market to reduce trucking distance to and from the terminal to distribution points. The FIAB also indicated that, not withstanding the industrial growth in the west and south west, there is a need for an intermodal facility in the 'central western' Sydney industrial area to meet local and sub-regional requirements, and that the proposed site at Enfield should be developed for that purpose. The ILC at Enfield will be one element in the NSW Government achieving 40% rail mode

share for transport of containers to and from Port Botany by 2011. These other intermodal areas will also need to be developed in the longer term, as identified in the Metropolitan Strategy.

Sites will be developed in the future in the western and south western areas of Sydney and will service the growing areas which will form their catchments. It would be inefficient to transport from Port Botany to those sites by rail (particularly with restricted rail windows outside of commuter peak hours) and then transport back to the inner and middle western catchment area by truck (backloading).

The ILC is located within an area surrounded by industrial development, and it is through these industrial areas that access will be provided between the proposed ILC and the arterial road network. The residential area south of the site and east of Cosgrove Road (opposite the proposed Community and Ecological Area) will not be subject to truck movements from the site.

Over time, and based on the experience of existing intermodals, the traffic impact of the fully operational ILC will decrease as truck fleet owners improve backloading trips between industrial areas, and continue to rationalise the number of trips required to the ILC in the pursuit of reducing fuel costs and improving efficiency. Moreover these benefits will expect to accrue more quickly once the network of intermodals is operational, and backloading is optimised across the Sydney Basin.

Existing and future heavy vehicles, not related to the ILC, will continue to affect residential areas on existing arterial roads, including Roberts Road and the Hume Highway. Motorways can all be accessed from the Enfield ILC via the designated arterial road network, which is the most appropriate route for heavy vehicle traffic. The impacts of trucks generated by the operation of the ILC are discussed in the traffic section below.

#### 3.4.2 Traffic

#### **Issues Summary**

Traffic issues raised by the many community submissions were:

- Traffic generation from the site will add to the many traffic problems that already exist further congestion on an already congested network;
- The traffic will have impacts in residential areas, causing safety, pollution and health effects;
- There will be further problems on specific roads, especially Roberts Road and Boronia Road. The ability of some roads such as Cosgrove Road to deal with increased truck traffic, especially B Doubles, was raised;
- Further congestion on major roads will lead to rat-running, especially for the smaller trucks which are difficult to control and will cause general motorists to divert through residential areas to avoid congested arterial roads; and
- Preferences for alternative access points to the site were raised.

A number of individual submissions addressed traffic issues in numerical terms, through provision of existing data or specific observations.

The Roads and Traffic Authority (RTA) provided 3 separate submissions in response to the EA. The second submission provided recommendations for the Statement of Commitments. The other two were concerned with:

- Traffic growth assumptions used in the EA studies, compared with those expected by the RTA and assumptions regarding back-loading;
- The capacity and operational performance of key intersections Hume Highway and Cosgrove Road, Roberts Road and Norfolk Road, Roberts Road and Juno Parade and Punchbowl Road and Cosgrove Road;
- The benefits of a one way pair option of Cosgrove Road and Gould Street;
- Results of modelling using "SCATES" compared with the results provided in the EA;
- Local area traffic management issues and requirements;
- The costing of required road works; and
- Compliance with Heavy Vehicle Regulations.

Bankstown and Strathfield Council submissions considered traffic issues and retained the services of traffic consultants to advise them on the traffic assessment undertaken in the EA. Canterbury Council also addressed traffic issues. The issues raised in the Strathfield and Canterbury Council submissions included:

- Local area traffic management and "rat running";
- Intersection analysis and performance, specifically Roberts Road and Norfolk Road and the ability of B Doubles to use that intersection;
- Wentworth Street, including its condition and the requirement for approval for access;
- Alternative entry and exit locations to the site;
- Network modelling and performance and management of operational traffic;
- Management of construction traffic; and
- Parking and access to the site for employees by public transport.

The issues raised in Bankstown Council's submission included:

- Traffic on Boronia Road / Juno Parade;
- Turning movements for trucks, especially B Doubles on Roberts Road at Norfolk Road and Juno Pde, and at Hume Highway and Cosgrove Road;
- The need for the access to be at Cosgrove Road rather than Wentworth Street, with a one way pair including Gould Street;
- Traffic management issues in Bankstown to avoid rat running by trucks and by other vehicles avoiding congestion; and
- Specific criticism of the modelling and analysis undertaken in the EA.

#### Responses

The issues raised by members of the community are generally addressed in the submissions by the RTA or Councils. A number of submissions raised the issue of the calibration of the traffic model used. The Independent Panel requested that the model be recalibrated to increase acceptance against the calibration criteria used and that the data should be assessed against 2002 screenline counts. This new analysis is provided in Appendix E. The recalibrated models were reviewed and are regarded as suitable for use in the transport assessment of the project. They confirm the level of base network activity and the marginal impacts that the proposed ILC would have on the surrounding traffic.

A summary of the comments provided by RTA and our responses to those comments follow. Detailed responses are provided in Appendix C.

| Issues                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Responses                                                                                                                                                                                                                                                                   |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| In the RTA's view – some of the assumptions in the EA are optimistic. The rate of development growth is not anticipated to be as high as that proposed.                                                                                                                                                                                                                                                                                                                                                                                             | Traffic growth may be greater than local development growth<br>on certain roads due to through traffic, and switching away<br>from congested routes.                                                                                                                        |
| Nor is the degree of backloading likely to rise from the current 8% to 30% without significant improvements to goods handling in the industry and / or technological innovation                                                                                                                                                                                                                                                                                                                                                                     | 30% backloading was accepted for use in the Port Botany<br>Expansion EIS. This target is expected to be reached at<br>Enfield due to an increase in multiple vehicle trip cycles, and<br>the multiple and complementary container business types on<br>site.                |
| Over time, the number of B-doubles accessing the site is<br>expected to increase. This may reduce total number of heavy<br>vehicles accessing the site                                                                                                                                                                                                                                                                                                                                                                                              | An increase in B-double use may reduce total traffic generation, although the impact of a smaller number of larger vehicles is likely to be similar to the stated impacts.                                                                                                  |
| The key intersections still have some capacity (with the exception of Punchbowl Road / King Georges Road) but without detailed SCATES modelling it is difficult to determine best operating options for these intersections                                                                                                                                                                                                                                                                                                                         | We consider that the INTANAL analysis presented is sound for<br>the purposes of evaluating intersection performance. The<br>SKM traffic assessment provided comparable current<br>intersection performance to the RTA assessment.                                           |
| Provided the appropriate widening and roadworks are carried<br>out, access to the site via Cosgrove Road and Norfolk Road is<br>considered to be less detrimental to traffic flow than if Cosgrove<br>Road remains a two-way road. While the one-way pair option of<br>Cosgrove Road and Gould Street was dismissed earlier in the<br>study, it should be re-examined as it has several benefits. It is<br>thought that a SCATES analysis would show traffic signals<br>operating more efficiently at the 2 intersections with the Hume<br>Highway. | See previous comment                                                                                                                                                                                                                                                        |
| It would also allow retention of on-street parking on Cosgrove<br>Road, something all the industries were adamant about.                                                                                                                                                                                                                                                                                                                                                                                                                            | Agree that this would be a benefit of the one-way pair option. It<br>should be noted, however, that the current ILC proposal for<br>using Cosgrove Road as a second access does not limit on-<br>street parking.                                                            |
| Modelling Results Using "SCATES"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                             |
| The RTA has undertaken detailed modelling of the road network<br>surrounding the Enfield site using SCATES model and has<br>concluded that the SKM traffic analysis was not comprehensive<br>enough to indicate the operational performance of linked<br>intersections along Roberts Road and also along Hume<br>Highway.                                                                                                                                                                                                                           | SKM did not analyse the linked junctions as it was considered<br>that the junctions could be assessed as stand-alone junctions.<br>The key reason being the distance between the respective<br>intersections. The analysis undertaken by SKM is considered<br>to be robust. |

#### Table 3-2: RTA Issues and Responses

| The RTA has investigated a number of options to improve the current and future performance of the following key intersections using its SCATES model.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | SKM analysis shows that the development does not have a significant impact on the performance of the intersections. This is documented in the EA.                                                                                                                                                                                                                          |  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| The modelling results show that any additional loading of heavy vehicles on the road network will adversely impact on the operational performance of the above intersections both in the construction phase and by 2016. Even though the number of heavy vehicles are relatively small compared to the total traffic volumes our modelling shows their impacts are significant.                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                            |  |
| Our modelling also shows that the operational performance of<br>the road network will be improved with a one-way pair option<br>using Cosgrove Rd/Gould St.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | SKM modelled the one-way pair subsequent to the submission<br>of the EA. The intersection of Cosgrove Road / Hume Highway<br>is improved by the one-way pair in the short term.                                                                                                                                                                                            |  |
| Cosgrove Rd/Hume Highway                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                            |  |
| We agree with the SKM analysis that this intersection needs<br>upgrading. However, the operational performance of this and<br>other intersections along the Hume Highway would be improved<br>by a one-way pair option by making Cosgrove Rd (south bound)<br>and Gould St (northbound) as a one-way pair. The total cost of<br>works required at this intersection is estimated at about \$3m.                                                                                                                                                                                                                                   | In the short term the performance of this intersection will<br>improve. However, wider network issues still need to be taken<br>into consideration.                                                                                                                                                                                                                        |  |
| Sydney Ports Corporation (SPC) claims that this entry/exit point<br>at Cosgrove Rd would only be used by a small number of heavy<br>vehicles to access the Intermodal Logistics Centre (ILC). The<br>RTA is, nevertheless, concerned that additional vehicles from<br>the ILC will impact the intersection. In view of the cost involved<br>in upgrading this intersection it was agreed that SPC would<br>submit, for consideration by the RTA, measures to limit the<br>number of heavy vehicles from using Cosgrove Rd as an<br>entry/exit point. This may obviate the need to upgrade this<br>intersection in the short term. | SPC will submit, for consideration of the RTA, measures to<br>limit the number of B-Doubles leaving from the ILC via<br>Cosgrove Road during AM and PM peak periods.                                                                                                                                                                                                       |  |
| Roberts Rd/Norfolk Rd                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                            |  |
| This intersection performs adequately now. However, with the ILC in place there would be a need to upgrade this intersection to accommodate 26m B-Double turning movements into/out of Norfolk Rd onto Roberts Rd for both physical turning capacity and safety reasons. The cost of these works is estimated at about \$3.6m. SPC have agreed to pay for these works.                                                                                                                                                                                                                                                            | SPC is committed to improving the layout of this junction in<br>consultation with the RTA to enable improved access for B<br>Doubles at this point. A breakdown of the costs has not been<br>undertaken. This will be undertaken during detailed design.                                                                                                                   |  |
| Local Area Traffic Management                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                            |  |
| The area bordered by Roberts Road, Hume Highway and Juno<br>Parade is predominantly residential, containing a number of<br>schools. For this reason it is important that heavy vehicle<br>movements associated with the ILC be constrained to the major<br>road network and not travel through residential areas when<br>travelling to or from the ILC.                                                                                                                                                                                                                                                                           | The movement of ILC trucks through the residential area will<br>be restricted and managed through LATM measures to be<br>undertaken in consultation with the RTA and Councils.                                                                                                                                                                                             |  |
| A range of traffic management measures will be required in the area to ensure that these movements are deterred, while still allowing access by residents and minimal impact on existing bus routes. While detailed design of these measures has not been undertaken, it is anticipated that up to \$1 million will be required.                                                                                                                                                                                                                                                                                                  | Costing of LATM measures has not been undertaken. The key measure is the redesign of Roberts Road / Norfolk Road intersection to prevent vehicles from accessing the residential areas. The possible movement of ILC trucks through the residential area will be restricted, and managed through LATM measures to be undertaken in consultation with the RTA and Councils. |  |
| Costing of Required Road Works                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                            |  |
| The RTA currently does not have any plans or funds available<br>for future widening of the Hume Highway at Cosgrove Rd or at<br>the other intersections mentioned above for the foreseeable<br>future.                                                                                                                                                                                                                                                                                                                                                                                                                            | Noted.                                                                                                                                                                                                                                                                                                                                                                     |  |

| The ILC will be severely constrained in its operational performance if the intersection improvements are not made during the construction phase of the ILC. Improvements will be required at the key intersections of Roberts Rd/Norfolk Rd as well as at the Hume Highway/Cosgrove Rd intersection if the ILC is to perform adequately.                                | It is not considered that the ILC will be severely constrained in<br>its operational performance if the improvements are not made<br>during the construction phase of the ILC. However, SPC will<br>undertake to improve the junction of Roberts Road / Norfolk<br>Road at this stage. No improvements are considered at the<br>Hume Highway / Cosgrove Road intersection. |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Compliance and Heavy Vehicle Regulations                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                            |
| The RTA welcomes measures to ensure that heavy vehicles<br>travelling to and from the ILC use appropriate routes and do not<br>travel through residential areas. The RTA is happy to be<br>consulted during the development of Local Area Traffic<br>Management (LATM) measures, particularly in relation to speed<br>zoning, noise reduction and emissions management. | Appropriate LATM measures will be considered to prevent<br>heavy vehicles from the ILC using residential streets to access<br>the arterial road network. 3-tonne load limits are already in<br>place.                                                                                                                                                                      |
| The RTA supports the proposal that all traffic is accommodated<br>on-site. The RTA also supports the development of a site traffic<br>management plan to bind all lessees and transport operators to<br>a central objective of developing the ILC site as a model of good<br>practice. The RTA is happy to be consulted during its<br>development.                      | Noted.                                                                                                                                                                                                                                                                                                                                                                     |

Summaries of the main comments from Strathfield and Canterbury Councils and responses are provided in Table 3-3. Full details are provided in Appendix B.

#### Table 3-3: Strathfield and Canterbury Council comments on Traffic and Responses

| Local area traffic management and rat running                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Local area traffic management and rat running<br>Smaller freight vehicles would find alternative routes via local<br>streets.<br>Access and egress to / from the site is being directed to<br>intersections already over capacity with current traffic volumes<br>which generally tends to create "Rat-Runs" through residential<br>streets.<br>Local area traffic management measures for Cosgrove Rd<br>and surrounding streets should be further investigated to<br>optimise the access / egress arrangements to the proposed<br>site.<br>Cosgrove Road / Punchbowl Road - The EA identifies the<br>residential land use on the southern end of Cosgrove Road,<br>however, there is no firm proposal of how trucks will be<br>prevented from using this intersection. This issue is<br>particularly important given the fact that the aaSIDRA analysis<br>currently shows the intersection of Cosgrove Road and the<br>Hume Highway as being oversaturated with conditions<br>deteriorating over time. The temptation of users of the Enfield<br>ILC to seek alternative access and egress points from the site<br>would be significant. | Any vehicle above 3 tonne tare and not articulated is identified<br>in the EA as a light truck. The existing traffic management<br>measures in residential streets surrounding the development<br>include extensive use of load limits (to 3 tonnes or less).<br>The existing performance of the intersections is an issue for<br>the RTA and local Councils to alleviate. Enfield ILC<br>contributes only a marginal increase to the volumes of traffic<br>on the road network. Measures will be put in place by SPC to<br>restrict ILC trucks from using residential streets and leaving<br>the ILC site via Cosgrove Rd during AM and PM peak hours.<br>Local area traffic management measures for Cosgrove Road<br>will be considered during detailed design to prevent large<br>vehicles travelling south on Cosgrove Road.<br>No intersection improvements are being considered for the<br>Cosgrove Road / Hume Highway intersection. The use of<br>Cosgrove Road south by trucks will be monitored by SPC and<br>controls implemented to prevent trucks travelling to and from<br>the ILC site from using Cosgrove Rd south. However, heavy<br>vehicles currently use this road to access the industrial land<br>uses along Cosgrove Road is limited by the chicane in |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Madeline Street and Blanche Street being one-way westbound.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Intersection analysis and performance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Disagrees with the statement that the Roberts Rd / Norfolk Rd<br>intersection is operating with spare capacity at level of service<br>B and requires no enhancement. We suggest that this<br>intersection is already over saturated with current traffic<br>volumes currently at level of service F and requires complete<br>re-construction and re- modelling to include SCATS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Our traffic counts and analysis indicate that the average delay<br>for all vehicles at this intersection is 20 seconds in both the<br>AM and PM peak hours. While the average delay on some<br>movements may be high, the average delay on others would<br>be minimal, resulting in an acceptable overall level of delay.<br>Our analysis is presented in the report which states that the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| modifications.                                                                                                                                                                                                                                                                                                                                                                                                                          | intersections operate at an acceptable level of service.                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Norfolk Rd is approved only for use by 23m B-doubles and Wentworth St is not approved for B-double use.                                                                                                                                                                                                                                                                                                                                 | Norfolk Road / Wentworth Street is approved for use by 23m<br>B-doubles between Roberts Road and Metro Smallgoods. It<br>would be appropriate to extend the approval to the ILC entry.                                                                                                                                                                                                                                                     |
|                                                                                                                                                                                                                                                                                                                                                                                                                                         | Council and the RTA have previously (June 2005) undertaken<br>tests with 25m B-doubles at Roberts Road / Norfolk Road.<br>The testing indicated a problem with the left turn into Norfolk<br>Rd. This turn would be possible with intersection<br>improvements (i.e. a splayed intersection approach – left turn<br>in from Roberts Road). Council indicated no problems with<br>other movements at this intersection with a 25m B-Double. |
| Traffic counts confirm that many of the critical intersections<br>pertinent to this proposal carry significant volumes of traffic<br>outside the hours quoted. Considering these volumes and the<br>documented peak period for truck movements from the ILC is<br>1430hrs with 103 movements, this in my mind considerably<br>flaws the efficient and effective movement of heavy vehicles<br>both to and from the proposed site.       | The peak period was analysed in terms of traffic impact of the<br>proposed development. The survey data from the tube counts<br>indicate that this is the peak period which should be<br>considered for overall network performance i.e. analysed<br>worst case analysis, which is consistent with RTA<br>requirements.                                                                                                                    |
| A number of intersections have been omitted which this<br>council deems critical to optimal traffic flow in the area.<br>Council believes that the following intersections are<br>considered critical to traffic operations in the area and have                                                                                                                                                                                        | The intersections analysed were considered to be the most critical to the impact assessment. A meeting was held with the RTA where additional intersections were requested and undertaken.                                                                                                                                                                                                                                                 |
| <ul> <li>Hume Highway/Waterloo Road</li> <li>Liverpool Road/Homebush Road</li> <li>Arthur Street/Richmond Road</li> </ul>                                                                                                                                                                                                                                                                                                               | Hume Highway / Waterloo Road was analysed in the studies<br>for the previous proposal in 2001. The LoS at this intersection<br>was A. It was not considered that conditions have significantly<br>changed at this intersection since 2001.                                                                                                                                                                                                 |
|                                                                                                                                                                                                                                                                                                                                                                                                                                         | Liverpool Road / Homebush Road – this intersection is to the east of the proposed site. The traffic distribution shows that approximately 1 HGV will use this intersection from the site and therefore not considered to be adversely impacted by the $ILC$ – i.e. the market / destination is to the west of the site.                                                                                                                    |
|                                                                                                                                                                                                                                                                                                                                                                                                                                         | Arthur Street / Richmond Road – No vehicles from the ILC are<br>anticipated to use this junction and therefore it has not been<br>considered.                                                                                                                                                                                                                                                                                              |
| The current geometry of the Roberts Rd / Norfolk Road<br>intersection is only suitable for B-Doubles to enter from the<br>south and exit to the north. With the exception of the<br>northbound right turn from Roberts Road into Norfolk Road<br>and the right turn movement from the eastern side of Norfolk<br>Road, all other movements provide inadequate turning paths<br>for B-Doubles. The modelling conducting by SKM indicates | Council and the RTA have previously (June 2005) undertaken<br>tests with 25m B-doubles at Roberts Road / Norfolk Road.<br>The testing indicated a problem with the left turn into Norfolk<br>Rd. This turn would be possible with intersection<br>improvements (i.e. a splayed intersection approach – left turn<br>in from Roberts Road). Council indicated no problems with<br>other movements at this intersection with a 25m B-Double. |
| that the dominant movement of HGVs to and from the<br>proposed site will be to the north and northwest. The volume<br>of traffic and level of congestion on Roberts Road will inhibit                                                                                                                                                                                                                                                   | The other two intersections mentioned (Roberts Rd / Juno<br>Pde and Hume Highway / Cosgrove Rd) are already approved<br>to provide appropriate access for 25 m B – doubles.                                                                                                                                                                                                                                                                |
| the ability of long vehicles to safely make wide turns in order<br>to enter from or exit to the north. it is recommended that the<br>intersection of Roberts Road and Norfolk Road be completely<br>reconfigured in order to adequately meet the needs of this<br>proposal.                                                                                                                                                             | SPC has agreed with the RTA that this intersection will be<br>enhanced to improve traffic flow, including B Double<br>movements, i.e. SPC to consider a left turn slip lane to<br>improve access to the ILC.                                                                                                                                                                                                                               |

| The EA states that Wentworth Street "south of Mayvic Street<br>has deteriorated and the pavement needs rehabilitation in<br>addition to upgrade works (widening). Although a detailed<br>survey has not been conducted as apart of this review, the on-<br>site inspection indicated that the current radii of the<br>intersection Wentworth Street and Norfolk Road are not<br>adequate to cater for long vehicles, in particular B-Doubles.<br>Although a detailed survey has not been conducted as a part<br>of this review, the on-site inspection indicated that the current<br>radii of the intersection Wentworth Street and Norfolk Road<br>are not adequate to cater for long vehicles, in particular B-<br>Doubles. | Wentworth Street is already heavily used by large vehicles,<br>and is approved for use by 23m B-doubles. The surrounding<br>land use is industrial, with many heavy-vehicle generating<br>developments already in place. The use of Wentworth Street<br>by the ILC is consistent with current usage of this road.                                                                                                                 |
| Alternative entry and exit                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Insufficient documentation has been made available regarding<br>the investigation of alternative entry / exit points to the<br>proposed site. Consideration should be give to the possibility<br>of linking Gould St to the existing internal road within the site.                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Several access points have been considered and thoroughly<br>documented by Sydney Ports Corporation. This was<br>summarised in the EA.                                                                                                                                                                                                                                                                                            |
| Network modelling and performance, Operational traffic                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| The EA concludes that "where the heavy vehicle volume<br>increases, it is generally only by a small margin. In most<br>cases, the change in peak hour traffic volume is negligible."<br>Whilst this is true, the NETANAL model significantly<br>underestimates the current level of congestion on the regional<br>road network and the fact that even a small increase in the<br>number of heavy vehicles will have a major impact on the<br>operation of the regional roads in the area, and the operation<br>of the local roads connecting to them. The assessment area<br>used is too small to enable the evaluation of the network wide<br>implications of this proposal                                                  | Independent counts were undertaken to calibrate the base<br>model. The model was verified and calibrated – See Appendix<br>C of the full Transport Working Paper (Appendix B) in the EA.<br>The results of the calibration process show that the model<br>used is acceptable for this analysis – and the model updated<br>to reflect existing conditions. The area of impact was<br>discussed with the RTA.                       |
| The EA fails to consider the impact of the recently opened M7                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The M7 Motorway was included in the model. The proposed M4 East Motorway is not considered as the proposal has not                                                                                                                                                                                                                                                                                                                |
| Motorway and the proposed M4 East.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | been endorsed by the NSW Government.                                                                                                                                                                                                                                                                                                                                                                                              |
| Construction traffic                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Construction staff traffic impact. At peak time up to 240 staff<br>will be employed plus 75 construction vehicles daily. The<br>closest train stations are 2.3 km away and the bus service<br>does not adequately service the site. Based on this, it may be<br>safe to assume that private vehicles will be used and therefore<br>parking facilities will need to be considered                                                                                                                                                                                                                                                                                                                                              | The movement of all 240 staff within the network peak hour is<br>a worst case scenario, and it would be likely that there would<br>be some spreading of arrivals and departures. SPC proposes<br>to cater for all on-site parking. The requirement for parking<br>has been discussed within the EA in Section 3.6.1 of<br>Appendix B. The actual parking arrangements would be<br>addressed as part of the detailed design stage. |
| A traffic management plan (TMP) shall be submitted to and<br>approved by Council for all demolition, excavation and<br>construction activities associated with the development taking<br>place and prior to the issue of a Construction Certificate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | A Construction Traffic Management Plan would be prepared<br>prior to construction commencement taking into consideration<br>the required demolition, excavation and construction activities.                                                                                                                                                                                                                                      |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Parking and public transport                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Public Transport - Given the poor access to public transport<br>for workers at the site and their likelihood of using their own<br>vehicles to travel to and from work, Strathfield Municipal<br>Council requests more detailed proposals of on-site parking<br>provisions for private vehicles.                                                                                                                                                                                                                    | On-site parking will be provided for all employees. The requirement for parking has been discussed within the EA in Section 3.6.1 of Appendix B. The actual parking arrangements would be addressed as part of the detailed design stage.                                     |
| Canterbury Council is supportive of denying heavy vehicle<br>access from the southern end of Cosgrove Road (where it<br>meets Punchbowl Road), as this should have the effect of<br>limiting heavy vehicle movements through local streets in<br>Canterbury City to reach the site. Council will however want to<br>be satisfied that the configuration of the southern end of<br>Cosgrove Road is satisfactory to limit heavy vehicle<br>movements, as no details are provided in the Environmental<br>Assessment. | The residential area east of Cosgrove Road has a heavy vehicle limit in place. Cosgrove Road is currently used by some heavy vehicles accessing existing land uses adjacent to the ILC site. Sydney Ports will not be attempting to control movements unrelated to the ILC.   |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Given the market area for the ILC, there should be no need for ILC trucks to use Cosgrove Road south of the site access point. Nevertheless, the movement of vehicles from the Cosgrove Road entrance will be monitored and access / egress controls implemented if required. |

Responses to the major issues raised by Bankstown Council are shown in Table 3-4. A more detailed response is provided in Appendix B. In particular, the technical comments provided by Parsons Brinkerhoff are address in the Appendix.

#### Table 3-4: Response to Bankstown Council

| Issues                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Responses                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Alternative Access Route<br>Council is also concerned that the EA has not seriously<br>considered an alternative access route to and from the site<br>(specifically a paired intersection involving Gould Street and<br>Cosgrove Rd onto the Hume Highway) which we believe could<br>accommodate all traffic entering and leaving the facility, and<br>improve integration with the arterial road network and negate the<br>need for access via Roberts Rd, and as a result would not<br>generate undue traffic impacts to the residents of Greenacre.                                                                                                                                             | SPC has considered alternative access points as part of the previous studies in 2001. A paired intersection has been considered subsequent to the submission of the EA. However, the intersection between Cosgrove Road and Hume Highway still requires upgrading in the future. The junction is unable to accommodate 100% of traffic from the site even with the upgrade in the future.                                                  |
| Only 2 access points are proposed into the site. These are via<br>Cosgrove Rd, from which trucks will gain access to the Hume<br>Highway and thence to Centenary Drive, and secondly, via a<br>bridge to Wentworth Street and thence onto Norfolk Rd and onto<br>Roberts Rd. It should be noted that the traffic modelling shows<br>that almost all the traffic will go in and out via this latter access<br>way. The impact of the additional traffic generated by the<br>proposed terminal was assessed by a model (calibrated by local<br>traffic surveys), which modelled natural traffic growth projections<br>for the area and adding the traffic generated by this development<br>proposal. | The distribution in the model minimises the travel time for ILC vehicles. As the majority of destinations are west of Enfield, the Roberts Road access is more popular. The expected split between Norfolk Road and Cosgrove Road is 75%/25%, due to the layout of the site and operations.<br>Enfield ILC contributes to <1% of overall traffic and therefore the impact of Enfield on the local and regional road network is negligible. |
| This assessment was analysed both with and without the<br>proposal going ahead, to compare the effect of background<br>traffic growth with the impact of the development. This analysis<br>indicated that for almost all roads where the traffic counts were<br>made that for peak periods, in both the morning and afternoon,<br>there would be an inappreciable impact on traffic volumes as a<br>result of truck movements generated by this facility.                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Site Access arrangements, and associated impacts on the Local Road Network.<br>The traffic projections included in the EAR indicate that almost                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | The distribution in the model minimises the travel time for ILC vehicles. As the majority of destinations are west of Enfield, the Roberts Road access is more popular. The expected split                                                                                                                                                                                                                                                 |
| all traffic entering or leaving the site will do so via the access                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | between Norfolk Road and Cosgrove Road is 75%/25%, due                                                                                                                                                                                                                                                                                                                                                                                     |

| onto Roberts Rd. Trucks will turn either north or south along                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | to the layout of the site and operations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Roberts Rd depending upon their final destination. Only 1 or 2 trucks are shown entering or leaving the facility via the Cosgrove Rd access point and then turning onto the Hume Highway from where they either go east or west along the Hume Highway or north along Centenary Drive. Whilst the assessment has shown that the traffic impacts are minimal in terms of traffic volumes and impacts on intersection capacity, it will remain the case that some 1160 trucks per day will be entering or leaving the site on the roads through Bankstown as a result of the proposed development                                                         | In addition, it should be noted that there are some 7000 heavy<br>vehicles (11% of total) currently using Roberts Road each<br>weekday, and about 4600 heavy vehicles (9%) using the<br>Hume Highway. The ILC vehicles will not be concentrated on<br>a single road, allowing any impact to be more easily absorbed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| This is a significant increase, and is likely to be associated with<br>other environmental impacts, including traffic noise and<br>congestion, air pollution, potential disruption to existing land<br>uses, disruption to existing residential character of existing roads<br>in Greenacre.                                                                                                                                                                                                                                                                                                                                                            | The other environmental impacts have been considered and presented in the appropriate sections of the EA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Impact on Boronia Rd/Juno Pde                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| One of Bankstown Council's main concerns about traffic impacts<br>is the potential for impact on the roads in Bankstown caused by<br>the use of roads passing through residential areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Boronia Road / Juno Parade are State Roads and also<br>permitted routes for B-Doubles. They have not been<br>nominated for use by ILC vehicles, but identified as potential<br>routes that could be used by vehicles accessing the ILC<br>facility. Our modelling indicates that the volume of ILC traffic<br>thet would use these meetics have the two sets of the transferred to be the transferred |
| We note that Roberts Rd and Boronia Road have both been<br>identified as suitable for use by trucks entering and leaving the<br>facility. Whilst the EA shows that projected truck volumes for<br>Boronia Street will be low, we object strongly to the use of<br>Boronia Rd/Juno Pde as a route for trucks associated with this                                                                                                                                                                                                                                                                                                                        | The ILC traffic using Boronia Road accounts for less than 1% of future traffic (6 vehicles per hour in AM and PM peak). It is not considered that this will adversely impact on Boronia Road.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| facility. The justification for trucks using Boronia Rd/Juno Pde is that it is classified as a State Road.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Furthermore, the identification of Boronia Rd and Roberts Rd as<br>State Roads has already lead to them being used in a way that<br>has resulted in significant cumulative impacts and loss of<br>amenity to the people that live along these roads.                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Other Impacts on Local Roads.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Bankstown Council is also concerned about the possibility of truck movements along other roads with a residential character. Again this may arise from trucks leaving the facility and travelling along Roberts Rd from where they could easily attempt to access the Hume highway by using non - State roads such as Rawson Rd, Norfolk Rd (and other like roads).                                                                                                                                                                                                                                                                                     | The movement of ILC trucks through the residential area will<br>be restricted, and managed through LATM measures to be<br>undertaken in consultation with the RTA and Councils.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Another source of impact on the local roads which has not been<br>assessed in the EA is the likely increase in the use of residential<br>roads in the area by cars that are taking detours to avoid the<br>state roads that will become busier as a result of the additional<br>trucks using them. This matter has not been addressed in the<br>EA, nor have any mitigation measures proposed. It could<br>however be reduced if the issue of access to and from the site<br>was reviewed such that essentially all of the access was not<br>provided via Roberts Rd, and better levels of access were<br>provided to Cosgrove Rd and the Hume Highway. | The ILC would not significantly impact on delays at<br>intersections in the area. The potential for rat-running for large<br>vehicles will be addressed through the LATM measures that<br>SPC would develop in consultation with Council and the RTA.<br>Rat-running by private vehicles is more difficult to manage<br>without detrimentally impacting on the route choice of<br>residents and local public transport vehicles. The ILC<br>contributes to 1% of the traffic on the road network.<br>Background traffic growth is the contributor to diminished<br>future road and intersection performance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| The underlying assumption is for container activity of 300,000<br>TEUs to generate traffic from the proposed development.<br>However the EA did not assess the traffic impact as a direct<br>result of the change in this assume throughput, that could<br>eventuate if some of the other proposed intermodal terminals do<br>not proceed, or if there is a variation in rail throughput:                                                                                                                                                                                                                                                               | The ILC is designed to handle up to 300,000 TEU per annum.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| • The EA traffic models for the morning peak periods cover the one-hour time period within each of these peak periods. However the Sydney commuter road network has longer commuter peak periods. Ideally the morning model included in                                                                                                                                                                                                                                                                                                                                                                                                                 | The models used in the EA assess the peak one-hour period<br>in the morning and afternoon. These are the periods of<br>maximum impact. Assessment of one-hour peak periods is<br>standard industry practice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| the EA should have had a 2 hour peak period from 7.00am -<br>9.00 am while the evening peak periods should have had a three<br>hour period from 3.00pm - 6.00pm;                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul> <li>The EA traffic model was not benchmarked against the<br/>Transport and Population Data Centre's Metropolitan Strategic<br/>Travel model;</li> </ul>                                                                                                                                                                                                                                  | The 2005 base trip table has been calibrated for observed volumes at some 15 key locations in the Enfield area, identified in the EA.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <ul> <li>It is unknown how the existing base year trip matrix was<br/>derived. This could lead to considerable variations in the traffic<br/>impacts from the facility;</li> </ul>                                                                                                                                                                                                            | The trip table from which the base table was calibrated has<br>evolved from previous projects, where calibration has also<br>been undertaken.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| • The traffic model included in the EA does not appear to have captured the effects of regional traffic surrounding the proposed facility, as the models were calibrated using counts undertaken within the immediate vicinity of the site. The use of RTA screenlines would have helped in this regard;                                                                                      | The counts collected for this project do include regional (as well as local) traffic that use the road network in the vicinity of the ILC. In the context of the study the model is not being used to forecast traffic diversion due to a new link or other network issue. The impact of the ILC is confined to a relatively small area (see Figure 2.2 of the EA Appendix B, which was discussed with the RTA at the commencement of the study). It is appropriate to concentrate on the sub-regional level rather than the wider network issues alluded to. |
| <ul> <li>The EA traffic model has not met major screenline<br/>calibration standards thereby resulting in less robust modelling<br/>results;</li> </ul>                                                                                                                                                                                                                                       | The cited additional calibration measures are only relevant to a regional model assessing wider implications of network change (eg a new link or road closure). The impact of the ILC is limited to the sub-regional level, and the adopted calibration process is appropriate.                                                                                                                                                                                                                                                                               |
| <ul> <li>The EA indicated that the 2016 base trip matrix was<br/>developed using population and employment forecasts provided<br/>by DIPNR, but has not shown the changes between 2005 and<br/>2016;</li> </ul>                                                                                                                                                                               | SKM used trips matrices for future trips relevant to 2016. The 2016 matrices have been used reliably by SKM for several years to forecast future traffic growth. Specific and significant changes were added to the matrices to reflect Port Botany Expansion and Sydney Airport forecast growth (as documented in the EA).                                                                                                                                                                                                                                   |
| • The EA did not indicate which vehicle categories were included in the traffic model's commercial trip table nor did it explain the process applied for developing the future commercial trip table;                                                                                                                                                                                         | The commercial vehicle trip table includes an estimation of heavy vehicle activity, and was calibrated in the local area for 2005 counts. The future commercial vehicle matrix takes into account growth in industrial activity across Sydney.                                                                                                                                                                                                                                                                                                                |
| <ul> <li>The traffic assignment technique used is also unclear and<br/>how commercial vehicles were converted into equivalent<br/>passenger car units;</li> </ul>                                                                                                                                                                                                                             | The truck matrix in NETANAL is used to estimate the effect of<br>heavy vehicles on link and intersection capacity. It is not used<br>on a stand-alone basis. The proportion of heavy vehicles in<br>the traffic stream is one of the inputs to the INTANAL<br>intersection models.                                                                                                                                                                                                                                                                            |
|                                                                                                                                                                                                                                                                                                                                                                                               | The PCU factors are documented in the working paper. The INTANAL default pcu factor of 2 for heavy vehicles was not modified for this project.                                                                                                                                                                                                                                                                                                                                                                                                                |
| Some of these deficiencies may on their own be of minor<br>significance. However, when considered cumulatively they<br>indicate that it is simply not possible to have confidence about<br>the findings of the traffic analysis. Given the significance of traffic<br>impact to this proposal, this is a matter of great concern.                                                             | The modelling approach used for the EA is appropriate for the assessment of the impact of the ILC. The findings of the traffic study are supported by an analysis of existing conditions, which reveal that many intersections around the ILC are already approaching capacity. Future background growth in traffic volumes, independent of the ILC, are likely to result in conditions as outlined in the traffic study.                                                                                                                                     |
| Concerns About Intersection Performance.                                                                                                                                                                                                                                                                                                                                                      | conditions as outlined in the traine study.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| In reviewing the EA, Council considered that it seemed to have glossed over the issue of intersection performance, and the adequacy of existing intersections.                                                                                                                                                                                                                                | The key intersections surrounding the ILC were analysed. The intersection analysis and reporting undertaken is appropriate for the assessment of the impact of the ILC.                                                                                                                                                                                                                                                                                                                                                                                       |
| One reason that we considered this to be the case was because<br>of Councils knowledge of the road network in Bankstown. In<br>particular, we know that the Roberts Rd/Norfolk Rd intersection<br>is already performing very poorly, as there are often pronounced<br>northbound delays along Roberts Rd in the AM peak. However,<br>this did not seem to be suitably acknowledged in the EA. | The analysis undertaken was based on data collected by an independent traffic counting company, specifically for this project. While there may have been congestion experienced at times, conditions are such that satisfactory Levels of Service are achieved across the space of an hour. The analysis undertaken as part of the EA is industry standard practice.                                                                                                                                                                                          |
| were asked to address this matter by the "swept path" technique.<br>This technique looks at the actual physical space occupied by                                                                                                                                                                                                                                                             | Swept path analysis was undertaken subsequent to the submission of the EA, to determine possible traffic                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| large vehicles as they turn through intersections, and provides a<br>more thorough and reliable way of assessing intersection<br>performance. The EAR did not include a swept path analysis of<br>large vehicle movements at critical intersections, and Council<br>(and PB) considered this to be a major deficiency in the traffic<br>assessment.                                                                                                                                                                                                                                                                                                                                                                                            | management measures for the Roberts Road / Norfolk Road<br>intersection. Subsequently, swept path analysis has been<br>undertaken on Hume Highway / Cosgrove Road and Boronia<br>Road / Roberts Road intersections. Strathfield Council and the<br>RTA have previously (June 2005) undertaken tests with 25m<br>B-doubles at Roberts Road / Norfolk Road. The testing<br>indicated a problem with the left turn into Norfolk Road. This<br>turn would be possible with intersection improvements (ie a<br>splayed intersection approach – left turn in from Roberts<br>Road). Council indicated no problems for other movements at<br>this intersection, with a 25m B-Double |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| PB found critical shortcomings in the ability of all 3 intersections to accommodate heavy vehicles, and suggested that they would all need to be upgraded.<br>Whilst some of the turning movements were found to be physically possible, it may have meant for example making a left hand turn from a through lane. This was found to be undesirable since it could increase the risk of collisions and put vulnerable road users at risk, as well as delaying through traffic. Similarly, a right turn should not have to be made from through lanes, particularly when heavy vehicle movements of some 1200                                                                                                                                  | It is noted that these vehicles may not be able to make certain<br>manoeuvres from their designated lanes, but this is consistent<br>with swept paths of trucks and some public transport vehicles<br>across Sydney. The right turn from Roberts Road into Norfolk<br>Road has a designated right-turn bay.                                                                                                                                                                                                                                                                                                                                                                  |
| movements per day are expected.<br>The PB report also provides other information concerning the<br>review of intersection performance included in the EA. It notes<br>that the EA only assessed intersection capacity by considering<br>level of service and delays, and that it did not show the extent of<br>queuing or the degree of saturation. Normally an analysis of<br>intersection performance would, besides considering level of<br>service and delay would also include a review of the degree of<br>saturation of the intersection and queuing, as this provides a<br>more comprehensive understanding about how the intersection<br>is performing.                                                                               | According to the RTA's Guide to Traffic Generating<br>Developments, "the best indicator of the level of service at an<br>intersection is the average delay experienced by vehicles at<br>that intersection." The criteria for Level of Service outlined in<br>Table 4.2 of the Guide relate to average delays only.                                                                                                                                                                                                                                                                                                                                                          |
| The failure in the EA to consider these aspects of intersection performance is an oversight and means it is not possible to have the necessary level of confidence in the findings of the EA regarding intersection performance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Given the growth in background traffic, the ILC contributes to <1% of overall traffic. As such the statement is considered to be unfounded.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Other Council Concerns about Traffic                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Regarding traffic volumes, the EA finds that these are<br>acceptable because they will be just a small component of the<br>projected traffic growth in the area, and that any impacts that will<br>occur on the road network or intersection capacity will be due to<br>the natural increase in traffic, and that the RTA will then need to<br>fix the resulting problems to the arterial road network. This is a<br>rather disingenuous response to the issue and ignores the fact<br>that the Sydney Ports proposal is responsible for a large volume<br>of the traffic that will cause considerable problems, and that the<br>performance of the proposed facility will be impacted by<br>congestion at key surrounding intersections.      | The ILC will contribute <1% of traffic and its contribution to any network deficiencies will be very minor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Internal Traffic Management. This matter has not been properly<br>addressed. In particular, there is not enough detail on how truck<br>movements and employee generated movements will impact,<br>especially at time of shift change over. There are many industrial<br>sites in Bankstown where shift changes generate serious traffic<br>problems as employees try to access State roads. In this case<br>the problem would be exacerbated with trucks also attempting to<br>leave the site at what will be close to the peak projected time for<br>truck movements to and from the facility. This issue needs<br>further consideration, and again could be ameliorated to some<br>degree if more heavy vehicle access could be provided via | The impact of shift changeovers would be mitigated by the diverse range of origins and destinations of staff, and the site layout. There would be greater use of Cosgrove Road by staff than there might be by trucks. Furthermore, many of the staff employed at the ILC would move from other jobs and may well be travelling at that time regardless.                                                                                                                                                                                                                                                                                                                     |

| Cosgrove Rd.                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Preferred Alternative Access Arrangement.<br>Bankstown Council wishes to suggest an alternative access<br>arrangement to and from the site, which is to provide primary<br>access via Gould Street and Cosgrove Rd. | SPC previously considered numerous alternative access<br>points for the site. The conclusion was that Norfolk Road /<br>Roberts Road and Cosgrove Road / Hume Highway were the<br>preferred access points. Access to the site via Punchbowl<br>Road is not permitted. An analysis was undertaken<br>subsequent to the EA of the one-way pair option. This<br>indicated that while satisfactory operation of the 2 linked<br>intersections (Gould Street and Cosgrove Road) would be<br>achieved in the short term, with background growth the 2-lane<br>eastbound constraint on the Hume Highway would result in<br>unsatisfactory performance in the future without the ILC. Even<br>with 3-lanes provided eastbound, the Cosgrove Road<br>intersection would be at LoS E with 100% of ILC traffic using it.<br>This is the same result as documented in the EA for 100% of<br>ILC traffic using the Cosgrove Road intersection. Therefore it<br>is not feasible to channel all ILC vehicles through this<br>intersection. |
|                                                                                                                                                                                                                     | Furthermore, it would add further pressure to the Hume<br>Highway / Centenary Drive intersection, as a large proportion<br>of ILC trucks would use Centenary Drive. Only allowing<br>access via Cosgrove Road would take traffic off the Centenary<br>Drive / Roberts Road overpass and direct it through the at-                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

It should also be noted that a Traffic Working Group involving Strathfield Council, Bankstown Council and Roads and Traffic Authority and Sydney Ports Corporation has been in existence since May 2005, and to date has met 6 times. The objectives of the group are to:

- Identify council concerns about traffic;
- Share information about traffic impacts foreshadowed by the development;
- Focus on 'local' impacts ie impacts on local residential streets and also look at strategic road networks;
- Discuss and decide on strategies which could be used to mitigate these local impacts;
- Decide the way forward on the implementation of these strategies.

The group does not have the charter for implementing any measures, only to suggest and recommend to the relevant authorities. Sydney Ports Corporation with the co-operation of Councils and the RTA expects the Group to continue throughout the life of the operation of the ILC to ensure any local community issues on traffic surrounding the site are addressed in a responsive and constructive manner.

#### 3.4.3 Noise and Vibration

#### Issue Summary

Noise impacts were identified by the community as of major concern. Of particular note were impacts due to construction activity, site operational works (especially night operations), increased general vehicle and truck movements in the locality of the ILC site, and the consequences of increased rail movements in the freight rail corridor. Vibration effects from trucks and trains were of concern to a number of people.

DEC and NSW Health also provided detailed submissions which addressed the issues of noise.

#### Responses

The main issues raised by the community were also addressed by DEC and NSW Health. Responses to the main issues raised by DEC and NSW Health are summarised in Table 3-5, below. Technical details, including supplementary modelling, are provided by Renzo Tonin and Associates (RT&A) in Appendix F. Rail noise is addressed in Section 3.4.5.

#### Table 3-5: Responses to Noise Issues

| Construction Noise                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| The construction noise levels provided in the EA indicates that<br>there is the potential for an increased risk of health effects<br>from noise exposure for all residences at various stages of<br>construction.<br>NSW Health indicated in its Director General requirements<br>that noise impacts upon sensitive receptors should be<br>specifically considered. This does not appear to have been<br>addressed and consequently the predicted impact of<br>construction noise upon St. Anne's School, Strathfield South<br>High School and other sensitive receptors cannot be-<br>ascertained.                                                                                                                                                                                                                 | Construction noise was assessed in the report to the nearest<br>affected residential receivers, as these were closer to the site<br>than other sensitive receivers, including St. Anne's School and<br>Strathfield South High School. Further to this the Strathfield<br>South High School is shielded from the site by the industrial<br>area to the north of the site and the existing noise wall along<br>the southern boundary of the school. There are no DEC<br>criteria that distinguish appropriate levels for residential<br>receivers versus non-residential receivers and impacts at non-<br>residential locations would be similar to or less than those<br>identified for residential locations. Therefore the assessment<br>that has been undertaken for the construction phase noise is<br>considered appropriate                   |
| It is likely, as with many major construction projects in an<br>urban area, that exceedance of noise goals will occur after<br>feasible and reasonable noise mitigation measures have been<br>used. Section 4.12.5 lists the proposed construction times as<br>7am to 6pm Monday to Saturday. However, the DEC advises<br>that normal construction times should be 7am to 6pm Monday<br>to Friday and 8am to 1pm Saturdays and no work on Sundays<br>and Public Holidays. Works should not be conducted outside<br>these hours unless there is specific justification for doing so.<br>In addition a, a community consultation program and a 24<br>hour complaints handling system should be implemented prior<br>to any out of hours works.                                                                        | Limiting construction hours will serve to extend the duration of<br>the works. SPC considers the slight increase in working hours<br>on Saturdays is warranted to ensure the overall construction<br>duration is as short as possible.<br>SPC will seek to maintain the construction times as specified<br>in the EA. However, an undertaking will be provided, and<br>written into the Noise Management Plan, that high noise<br>operations will not be undertaken after 1pm on Saturdays.                                                                                                                                                                                                                                                                                                                                                        |
| Operational Noise                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| The statement of commitments for noise performance does<br>not include a commitment to achieve acceptable noise levels<br>at sensitive receiver locations, which, in this context means<br>achieving noise levels that substantially comply with the<br>Governments Industrial Noise Policy (INP). The NIA has<br>indicated that, under noise enhancing weather conditions that<br>have been determined to be a significant feature of the area,<br>the proposal will generate noise levels that significantly<br>exceed the INP PSNL. The predicted levels significantly<br>exceed the levels that DEC would normally license to. On this<br>basis the statement of commitments are not considered<br>capable of delivering acceptable noise outcomes.<br>NSW Health indicates that Table 11-7 (Chapter 11) of the | Mitigation options were extensively reviewed as part of the<br>EA. It is considered that at this stage of the project, when the<br>design is still fairly flexible, all reasonable and feasible<br>mitigation measures have been considered to reduce overall<br>noise emissions from the site. Additional mitigation will need<br>to be considered at the design phase to reduce noise levels to<br>achieve compliance with the Project Specific Noise Levels<br>(PSNLs). Any further measures considered would include<br>source specific measures, such as limiting plant noise levels<br>and use of local shielding (eg container stacks, sheds,<br>buildings) in specific locations. These more specific design<br>matters are difficult to determine at this stage of the project.<br>However, in response to DEC's concerns regarding noise |
| Environmental Assessment highlights the predicted<br>exceedances of operational noise criteria when compared to<br>the NSW EPA Industrial Noise policy guideline values. It is<br>noted that predicted noise levels for two of the six residential<br>sites considered exceed criteria levels during calm and<br>isothermal weather conditions even after mitigation measures<br>are used.<br>Exceedances are greater under adverse weather conditions<br>with these adverse wind conditions expected to occur<br>approximately one third of the year.                                                                                                                                                                                                                                                              | exceedances, the most likely or typical operational scenario<br>and additional mitigation measures have now also been<br>modelled from all available information known at this stage of<br>the project, and the results of this assessment are presented<br>in the RT&A Technical Memo in Appendix F.<br>It is noted that noise-enhancing wind conditions do not<br>necessarily occur for one third of the year from any single<br>direction. Instead they are expected to occur for a range of<br>different directions depending on the time of year and time of<br>day – see the RT&A Technical Memo in Appendix E, which<br>presents the outcomes of a more detailed analysis on wind                                                                                                                                                           |
| The exceedances have been predicted to be as much as 15dB above criteria. It is of further concern that noise impacts                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <ul><li>data. This shows that different noise receivers are impacted<br/>for different seasons of the year and at different periods of the<br/>day.</li><li>Given the above and consistent with the noise modeling for<br/>the "worst-case" scenario so as not to unnecessarily prescribe<br/>the operation of the site at this stage, a "worst case" noise</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| up to 7dB above criteria are predicted at St Anne's school. It is<br>noted that the predicted values are based on the assumption<br>that all noise sources operate concurrently ("worse-case"<br>assessment). However, the noise consultants report noted<br>that there is little to no reduction in noise impact between a<br>"worse-case" scenario and "normal-case" scenario.                                                                                                                                                                                                                                                                                                                                                                        | model was built and a conservative assessment was<br>undertaken and presented in the NIA in accordance with all<br>relevant noise policies and guidelines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | The RT&A Technical Memo presents areas of conservatism<br>which are built into the assumptions used in the NIA noise<br>modelling for assessing impacts at night, and what effect each<br>of these would have if one were to model a more realistic,<br>likely or typical night operational scenario at this stage of the<br>project.                                                                                                                                                                                                                                                                                                                                                               |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | So in response to this, typical operational scenarios have now<br>also been modelled from all available information known at<br>this stage of the project, for the Day, Evening and Night<br>periods respectively. For each of the three assessment<br>periods, noise was modelled for calm conditions and for the<br>worst-case wind conditions. Separate noise models for the<br>'intrusiveness' and the 'amenity' assessment periods, were<br>run to allow for the direct assessment of impacts for each<br>scenario during each of the three assessment periods. The<br>results of these assessments are presented in the RT&A<br>Technical Memo in Appendix F.                                 |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | In summary compliance is achieved with both the<br>'Intrusiveness' and the 'Amenity' PSNLs under calm and<br>worst-case noise-enhancing wind scenarios, at all receivers<br>with the exception of a few minor exceedances during adverse<br>wind conditions of 1-2dB(A) at 3 locations and one 5dB(A)<br>exceedance under adverse wind from one specific direction.<br>These results do not include further additional noise mitigation<br>measures, such as those discussed in the RT&A Technical<br>Memo. Therefore, there is scope to further reduce noise<br>emission levels from the operation of the site as part of the<br>Detailed Design / EMP phase in order to comply with the<br>PSNLs. |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Any further measures considered at the detailed design stage<br>would include source specific measures, such as limiting plant<br>noise levels and use of local shielding (eg container stacks,<br>sheds, buildings) at specific locations etc as described in the<br>RT&A Technical Memo in Appendix F. After all reasonable<br>and feasible measures are considered at the detailed design<br>stage all physical and management noise control measures<br>will be incorporated into the EMP for the site to ensure the<br>PSNLs are achieved.                                                                                                                                                     |
| Intermittent /instantaneous noise generation was assessed<br>through the NSW Environmental Noise Control Manual in the<br>form of a sleep arousal criterion. Exceedances of these<br>criteria are predicted in all weather conditions, some by as<br>much as 15dB (giving a 30dB increase from background). As<br>this development intends to be an ongoing 24hour/7day a<br>week operation it is important that community noise impacts<br>strictly comply with noise criteria and it would be desirable to<br>reduce this level below this criteria where practical.<br>Intermittent /instantaneous noise generation should be kept to<br>a minimum to reduce any potential adverse effect on health<br>through both sleep disturbance and annoyance. | See response to DEC issue related to sleep disturbance (below).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| The DEC notes that the Noise Impact Assessment presents<br>only the result of an assessment of potential noise enhancing<br>weather effects. The meteorological data used and the<br>weather station location has not been presented in the NIA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The NIA presents predictions under both calm-isothermal (acoustically neutral) conditions and adverse weather (noise-enhancing wind) conditions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | The weather stations from which the meteorological data were acquired are Bankstown Airport AWS and the Lidcombe AWS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Information regarding wind was based on available AWS wind rose data – see the RT&A Technical Memo's Annexure 1 (in Appendix F).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | According to the NSW INP, prevailing winds above 3m/s (11km/h) are not considered in noise assessments as they do not increase noise impacts. Furthermore, noise measurements should not be undertaken when wind speed exceeds 5m/s (18km/h).                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

The DEC notes that the noise modelling considered two broad operating scenarios. The difference between the two scenarios is that Scenario 1 included both shunting locomotives (2x48class) and locomotives involved in moving a train set on to the site (3x81 class), while scenario 2 only considered the shunting locomotives. It should be noted that it is DEC's experience that older and noisier locomotives also operate on the Botany Goods Line.

The NIA does not indicate the number of residences potentially affected by noise levels that exceed the Project Specific Noise Levels (PSNL) under noise enhancing weather conditions. The DEC notes that Table 4.12 in the NIA indicates that under calm isothermal conditions that 140 houses are predicted to experience noise levels slightly above the PSNL. The number of houses with significant exceedances above the PSNL during noise enhancing weather conditions is likely to be significantly more.

It is clear from the NIA that widespread and significant exceedances of the PSNL are predicted. (In this case the PSNL are determined from the amenity criteria).

Importantly, predicted noise levels are normally used to establish appropriate noise limits for an operation (where applicable). In cases where it is not possible to achieve the PSNL even after applying all feasible and reasonable mitigation measures, predicted noise levels may be used to set noise limits that are up to 5 dB above the PSNL following negotiation with the regulator and/or consent authority. In contrast, negotiated agreements would normally be required where predicted levels are still more than 5 dB above the PSNL after the application of all feasible and reasonable mitigation measures.

In view of the likely number of noise-sensitive receivers affected by exceedances of the PSNL and the magnitude of these exceedances, it is recommended that:

- Further mitigation measures are investigated with a view to reducing the extent and magnitude of exceedances of the PSNL to within an acceptable range, including through the use of best-practice rolling stock on the ILC site; and

- Additional consideration is give to the extent to which negotiated agreements may be feasible and reasonable mitigation measure, for example land use mapping with overlaid noise contour plots.

The DEC advises that the exceedances of the sleep disturbance screening criteria are significant. Current DEC guidelines recommended that where the screening criteria is exceeded that a more detailed analysis is required. The detailed analysis should cover the maximum noise level or  $L_{A1}$ , (Iminute), the extent that the maximum noise level exceeds the background level and the number of times this happens in the night period. Some guidance on possible impact is contained in the review of research results in the appendices to the Governments Environmental Criteria for Road Traffic Noise (ECRTN). Other factors that may be important in assessing the extent of impacts on sleep include:

how often high noise events will occur;

• time of day (sleep disturbance is normally taken to occur between 10pm and 7am);

SPC advised that, based on current information, 48-class locos will typically be used as 'shuttle trains' and 81-class locos will be used for rural bound trains.

The issues of older and noisier locomotives are a result of new entrants to compete in a deregulated freight rail market. As the percentage of container movements by rail increases, the improved economic certainty will increase the commercial viability for further investment in more efficient rolling stock.

It is noted that the number of houses affected shown in Table 4.12 of the NIA is high as the noise model was conservative in not taking into account local shielding provided by residential and other non-industrial buildings off site. Such building data was unavailable for inclusion in the noise model at this stage. It is intended that building data be included in the detailed noise model to be run at the Detailed Design / EMP phase, which is expected to show a significant reduction in the number of houses affected. Therefore, an analysis of the number of affected houses would be more accurately conducted at the DD / EMP phase and after all additional reasonable and feasible noise mitigation options, as set out in the RT&A Technical Memo (in Appendix F), have been incorporated into the noise model.

Exceedance of the noise criteria was predicted after the application of mitigation measures, but only during adverse wind conditions and mostly in terms of the 'amenity' criteria. The modelling conservatively assumes that the site is operating at capacity and all plant is operating at full load over the entire night-time 9 hour assessment period. As this is unlikely to occur, then the typical operational scenarios have now been modelled. The results of these assessments are presented in the RT&A Technical Memo in Appendix F.

In summary compliance is achieved with both the 'Intrusiveness' and the 'Amenity' PSNLs under calm and worst-case noise-enhancing wind scenarios, at all receivers with the exception of a few minor exceedances during adverse wind conditions of 1-2dB(A) at 3 locations and one 5 dB(A) exceedance under adverse wind from one specific direction. These results do not include further additional noise mitigation measures, such as those discussed in the RT&A Technical Memo, therefore, there is scope to further reduce noise emission levels from the operation of the site as part of the Detailed Design / EMP phase, when more specific details about the site and its operations are known, in order to comply with the PSNLs.

After all additional reasonable and feasible measures are incorporated into the design at the Detailed Design /EMP phase (as set out in the RT&A Technical Memo in Appendix F), it is expected that the PSNLs will be achieved.

The DEC's sleep arousal criterion is currently being reviewed, as the general opinion is that this criterion is conservatively low. For the NIA, guidance was taken from the EPA's ENCM, which provides a conservative criterion, and the ECRTN, which sets a suitable criterion which will ensure that 90% of the population (including the aged) are protected in their sleep, based on recent research.

However, it is understood that the current DEC position is that an initial screening test should be carried out to determine whether instantaneous noise sources at night comply with the criteria established in the ECRTN. If noise levels are found to exceed, more detailed analysis is required to determine the extent of potential disturbance to sleep, based on the number of events, timing of events etc.

It is unlikely that this level of detail can be provided at this early stage of the project. This matter would be better

| <ul> <li>whether there are times of day when there is a clear<br/>change in the noise environment (such as during early</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | addressed at the design stage as part of the EMP, when details of site operations are known.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| morning shoulder periods).<br>The NIA concludes that "under calm and isothermal conditions<br>the levels remain below 65dB(A), which is considered to be<br>the level that could cause arousal based on more recent<br>research".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Notwithstanding this, a more detailed analysis of sleep<br>disturbance issues is carried out and included in the RT&A<br>Technical Memo (Appendix F), based on several<br>assumptions.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| The reference to 65dB(A) comes from the Environmental<br>Criteria for Road Traffic Noise (ECRTN) Appendix B which<br>presents the results of limited studies regarding awakening<br>reactions. The research suggests that maximum internal<br>levels not exceeding 50-55dB(A) are unlikely to cause<br>awakening reactions. It is generally postulated that a 10dB<br>transmission loss occurs between a typical residential facade<br>with windows open to allow minimum Building Code of<br>Australia ventilation requirements, hence the reference to an<br>external level of 65dB(A).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Whilst the material in Appendix B to the ECRTN may be used<br>as part of an assessment of sleep disturbance impacts, it<br>should not be relied upon as being capable of informing an<br>objective criteria. Other factors such as the number of times<br>the maximum noise levels events are likely to occur during the<br>night time period and the nature and character of the noise<br>needs to be considered.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Road Noise                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| NSW Health notes that current road noise levels are already<br>between 7 to 21dB above the criteria set in DEC<br>Environmental Criteria for Road Traffic Noise. The predicted<br>additional noise generated from this proposed development<br>falls within the 2dB increase allowed under the DEC<br>Environmental Criteria for Road Traffic Noise. Despite this<br>compliance additional mitigative options should be pursued in<br>view of the pre existing noise impacts experienced by affected<br>residents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The project is not responsible for existing road traffic noise levels. The contribution to traffic noise from this project is calculated to be in the order of $0 - 0.2$ dB(A) at residential receiver locations – refer to the RT&A Technical Memo (Appendix E). Such a small traffic noise increase is considered minor, insignificant and inconsequential. Furthermore, the NIA found that mitigation of existing noise, through the provision of noise barriers for residences is not possible as driveway access to roads is required. Therefore it would not reasonable and feasible to reduce traffic noise levels. |
| DEC indicates that Table 5.4 in the NIA indicates that<br>predicted 2016 LAeq,15hr and LAeq,9hr noise levels,<br>including ILC traffic, will not result in a greater than 2dB<br>increase in existing traffic noise levels. It appears that the<br>predicted 2016 LAeq period levels have also taken into<br>account natural traffic growth (growth would occur regardless<br>of the ILC), and hence the predicted levels are conservative. It<br>would however be beneficial for the traffic noise increase<br>associated solely with ILC traffic be reported. However, it<br>should be noted that the traffic noise levels being<br>experienced on Liverpool Road and Roberts Road<br>significantly exceed the Roads and Traffic Authority's (RTA's)<br>definition of acute traffic noise exposure (ie acute traffic noise<br>levels are levels exceeding L.Aeq,15hr 65dB(A) and LAeq,9hr<br>60dB(A)). This should be considered in the context that one of<br>the objectives of the ILC is to reduce acute traffic noise<br>impacts in the area around Port Botany.<br>The number of residences experiencing acute noise levels | The assessment carried out in the NIA, compares 2016 traffic<br>noise levels (with ILC) to 2006 future-existing noise levels<br>(without ILC). This type of assessment is considered to be<br>more conservative than a direct comparison in 2016.<br>Nonetheless, an assessment which compares traffic volumes<br>for with and without ILC (ie natural growth only) is attached in<br>the RT&A Technical Memo (in Appendix F).                                                                                                                                                                                             |
| has not been identified. This is not a criticism of the NIA, as<br>that level of assessment is not normally undertaken. However,<br>given the government objective of reducing road traffic noise<br>increases on roads surrounding Port Botany, it would seem<br>logical to consider the extent of traffic noise impact in the<br>vicinity of the proposed ILC in terms of exposure to acute<br>noise levels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | or assessment, but it could be considered during the DD/EMP<br>phase. That is, the number of residences exposed to acute<br>noise levels (with/without ILC) will be identified more<br>accurately during the Detailed Design /EMP phase. These will<br>be identified and appropriate consultation / mitigation<br>strategies put into place to work with the residents to minimise<br>impacts.                                                                                                                                                                                                                             |
| Cumulative                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| It is important that cumulative predicated impact of road and<br>rail be added to the predicted operational impacts to<br>determine a more accurate prediction of noise impacts. We                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Cumulative noise impacts have been considered to the extent<br>that NSW noise policy allows, through the application of the<br>amenity criteria. It is noted that in NSW road, rail and                                                                                                                                                                                                                                                                                                                                                                                                                                    |

note that cumulative impacts of road and operational noise may be significant to the northwest of the proposal (residences located between Norfolk Road, Hume Highway, Roberts Road and Waterloo Road). Cumulative rail and operational noise impacts may be significant to the southeast of the proposal (residences located in the vicinity of Bazentin Road, Belfield). industrial noise are assessed to their own separate criteria, as different types of noise are perceived differently in the community. There are currently no overall criteria that address total environmental noise.

Vibration was addressed in the EA. The types of activities carried out on site during both construction and operation are unlikely to cause significant ground vibration beyond 25 m from the source. Given that the nearest potentially affected premises to the ILC are more than 50 m away, it is unlikely that ground vibration will be an issue on this site.

There will be no substantial change in truck traffic volumes on any road near residential areas. Therefore, there will be no change in existing vibration conditions due to traffic.

#### 3.4.4 Air Quality

#### **Issue Summary**

Concern was expressed by the community over, amongst other things, the impacts of dust during construction, general air pollution caused by an increase in trucks in the area and the effects of diesel operations on the site and on the rail line.

DEC and NSW Health addressed construction and operational air quality issues in some detail. Given the indication of exceedance of  $PM_{10}$  criteria during construction and the potential for it during operation, DEC noted that a further developed mitigation strategy appears necessary to prevent impacts from both construction and operation activities. DEC recommended that a revised air quality impact assessment that demonstrates compliance to appropriate criteria should be developed in parallel (or iteratively) with:

- development of more detailed construction and operation air quality management plans;
- Development of a refined air quality impact mitigation strategy to prevent impacts; and
- All technical issues (including impacts from off site activities) being addressed through additional assessment work.

In particular, DEC considers that further assessment work is required to develop a final suite of mitigation actions that will ensure that appropriate air quality outcomes are achieved during the construction phase. Importantly, it indicates predictions of 1 to 27 days annually in excess of 24-hour  $PM_{10}$  criteria (with and without mitigation in place) required refined modelling approaches, greater refinement of modelling assumptions or a revision of operation and construction plans or a revision of the mitigation strategy, or all of these.

#### Response

In terms of the issue of construction dust raised by the agencies and the community, the EA clearly identified that despite some exceedances of the criteria used, the dust generated by the proposed construction works would be able to be managed adequately. A detailed Dust Management Plan will be

developed before construction begins. With the benefits of better knowledge of the construction schedules and methodologies, the DMP will provide more detailed mitigation measures to manage the dust levels so that the criteria are not exceeded. This would include real time monitoring of dust levels and a response process to manage them.

Our response to DEC's specific comments on construction dust and the choice of air quality criterion is provided below.

For the  $PM_{10}$  air quality assessment (both construction and operational) we used the NEPM criteria of 50 ug/m<sup>3</sup> (24 hour) with 5 exceedances allowed rather than the DEC criteria of 50 ug/m<sup>3</sup> with no exceedances allowed. The DEC criteria are considered too stringent for assessment of construction phase  $PM_{10}$  when existing air quality is taken into account. As a demonstration of this the background air quality data for Lidcombe, which was used for modelling purposes and is shown in the attached memo (Appendix G), provides the the highest background  $PM_{10}$  (24 hour) approaching 40 ug/m<sup>3</sup>. In modelling  $PM_{10}$  impacts it can be seen that an impact from construction greater than 10 ug/m<sup>3</sup> could result in a single exceedance of this criteria. An allowance of 5 exceedances per year is considered more reasonable and workable, particularly in light of the fact that in many other jurisdictions eg. US and Qld (within Australia) far less stringent criteria are applied, eg. 150 ug/m<sup>3</sup>.

The  $PM_{10}$  modelling methodology for construction phase impacts is considered reasonable, whereby initially the modelling was undertaken with no dust controls measures in place, and as expected impacts showed exceedance of the relevant criteria. Various dust control measures were progressively implemented until a level of control was achieved that showed impacts could be effectively managed. These controls included sealing of some surfaces that would be otherwise left unsealed, high level watering of the site and wind speed and wind direction restrictions, which may be required. In reality dust impacts will be managed by various means, including the physical controls assumed in the modelling and a sophisticated real-time  $PM_{10}$  monitoring program which will advise the construction contractor of any dust impacts within sensitive receiver locations should these occur. The contractor can then (almost immediately) alter construction works which may include restriction of works at certain locations in certain wind conditions such that impacts are effectively managed, without any exceedance of the relevant criteria. A protocol will be devised to determine the appropriate response to readings greater than 50 ug/m<sup>3</sup>.

The  $PM_{10}$  criteria of 50 ug/m<sup>3</sup> (24 hour) is a very stringent criteria and generally as  $PM_{10}$  levels approach the criteria value there would be not perceived deterioration in air quality that would enable an operator to pro-actively implement controls to mitigate impact. It is noted, however, that the  $PM_{10}$ criteria is a 24 hour criteria and site operators will have instant access to real-time  $PM_{10}$  data under the monitoring program proposed. As such, as instantaneous  $PM_{10}$  levels reach some pre-determined threshold value, control measures can be implemented and total  $PM_{10}$  impacts within the 24 hour period can be mitigated so that the criteria is achieved.

In considering DEC's comments on operational impacts, the  $PM_{10}$  criteria of 50 ug/m3 (24 hour) is not exceeded by worst-case impacts (background + impact levels) on any occasion (nil exceedance) within

residential areas surrounding the ILC. This is shown in Table 7-7 and Figure 5 of Appendix F of the EA (Air Quality Study).

The issue of locomotive emission factors was raised. With respect to the on-site equipment the US EPA provided the only available set of "robust" emission factors for the type of equipment proposed, and Tier 3 best coincided with the likely year when this equipment would be required at Enfield. It should be noted in terms of NO<sub>2</sub> the predicted operational phase impacts (on-site equipment / trucks / trains) are well below DEC 1-hour and annual criteria, at most 77 % of the 1-hour criteria, for the worst-case including background levels. In the case of  $PM_{10}$  where impacts are only marginally less than the 24-hour criteria it should be noted that there is no difference in particulate emission factors for Tier 0, 1, 2 and 3 equipment, for the relevant engine sizes considered in the assessment.

At a meeting with the DEC comment was also made with respect to locomotive emission factors in particular the sulphur content of diesel, in so far as how this would impact on particulate emissions. The locomotive emission factors were taken from NPI, 1999 and controls applied as per USEPA420-F-97-051. The quoted diesel sulphur content in NPI, 1999 is 0.18 % which is less than the percent which will be used by locomotive diesel engine at the time the ILC becomes operational. Hence, the sulphur content data used is considered conservative in terms of both calculation of particulate emissions and  $SO_2$ .

The potential for road traffic air quality impacts was clearly identified in the EA and the impacts were assessed as negligible.

#### 3.4.5 Rail Operation

#### **Issue Summary**

A number of submissions noted that the Environmental Assessment does not include any information on the environmental impacts from the increase in train numbers on the freight line as a result of this proposal and the ongoing expansion of Port Botany.

Marrickville Council indicated that matters relating to rail nose and vibration (on the freight train line between Port Botany and Enfield) have not been properly addressed. It was considered unacceptable that neither the Environmental Assessment for the proposed Enfield Intermodal Logistics Centre, nor the Port Botany Expansion EIS, has undertaken a full and accurate assessment of the noise and vibration impact of freight rail trains (moving between both facilities) upon dwellings located in the Marrickville LGA. Rather than conducting any original assessment of the impact of freight rail noise and vibration upon dwellings in the Marrickville local government area (LGA), the Environmental Assessment simply makes reference to the assessment contained in the Port Botany Expansion EIS of early 2004. Marrickville Council has serious concerns regarding the methodology which Sydney Ports Corporation has used (with regards to both the expansion of Port Botany and the proposed Intermodal terminal at Enfield) in regards to the impact of rail noise and vibration. Due to these serious and ongoing concerns, Marrickville Council requested that the current Intermodal Logistics Centre proposal not be approved - until such time as Sydney Ports Corporation has conducted a full and accurate assessment of the noise and vibration impact that freight trains (including the additional trains as a result of an expanded Port

Botany and an intermodal terminal at the Enfield marshalling yards site) travelling between Port Botany and Enfield would have upon dwellings in the Marrickville local government area - with the assessment making commitments in regards to consultation with affected residents, and the installation of noise mitigation works which would result in compliance with Environmental Protection Authority rail noise criteria.

Similar comments were offered regarding problems associated with old and inefficient locomotives using the freight line, and the potential impacts on air quality due to this increased level of emissions.

The DEC'S position on the rail noise assessment for the Botany Goods Line is that no holistic and well informed analysis of the potential noise impacts arising from the Governments Policy of increasing rail modal share of port related traffic has been undertaken. More importantly, the responsibility and commitment to an assessment, and where necessary noise mitigation, is not clear.

The DEC also emphasises that the EA has not explored the extent to which the use of best- practice rolling stock could be used to reduce the rail-related impacts both at the ILC and along the rail corridor between the ILC and Port Botany. It is the DEC's experience that valuable reductions in noise can be achieved through the use of modern rolling stock. It is noteworthy that the EA assumes a class of locomotives for shunting that have typically been in service for 35 to 40 years and a class of mainline locomotives that have typically been in service for 20 to 25 years. The DEC indicated that options for best-practice rolling stock that could be considered for the ILC include:

- modern locomotives that achieve the current locomotive noise criteria;
- multi-pack container wagons, to reduce the extent of noise generated by stretching and bunching of the train;
- ECP braking technology to allow for smoother braking; and
- the use of hybrid locomotives for shunting.

The DEC considers it would be appropriate to further assess the feasibility and reasonableness of using best-practice rolling stock to deliver improved noise outcomes, particularly given the extent of exceedances of PSNL and the current high levels of rail noise along the Botany to ILC rail corridor.

#### Responses

The EA outlined that, if the NSW Government policy that 40% of containers to and from Port Botany are to be carried by rail by 2011, the number of freight trains using the dedicated line from Port Botany would increase significantly beyond current levels, regardless of whether the ILC at Enfield is developed or not. The proposed ILC would not be generating more freight trains along the line. Rather, it would provide a loading / unloading point for some freight trains that are expected on and must use that line. The management and regulation of noise and vibration issues on the freight line is a matter for RailCorp (the current Environment Protection Licence (EPL) holder), the likely future EPL holder (ARTC) and the regulator of the licence (Department of Environment and Conservation (DEC)).

The operation of the rail transport of freight to and from Enfield falls within the existing operating licences for the freight line. Impacts were discussed in Chapter 8 of the EA, and no further assessment is considered to be required.

However, it is noted in the DEC's comment on the rail noise assessment for the Botany Goods Line that no holistic and well informed analysis of the potential noise impacts arising from the NSW Governments aim of increasing the rail modal share of port related traffic has been undertaken. As a consequence the responsibility and commitment to an assessment, and the necessity for the application of feasible noise mitigation measures, is not clear.

Sydney Ports acknowledges DEC's concern, and in response to this Sydney Ports is prepared to participate in any interagency working group established to address rail noise impacts along the dedicated freight line. It should be noted that Sydney Ports, as a condition of consent for the Port Botany Expansion project, will establish a Rail Noise Working Group to address rail noise issues along the Freight Line between Enfield and Botany Yard. This group includes Sydney Ports, RailCorp, DoP, ARTC and relevant councils and community members. Consultation with relevant regulatory authorities including DEC would also be undertaken.

### 3.4.6 Pollution (Light Spill)

#### Issue Summary

A number of submissions focused on the effects of pollution on the amenity and health of residents. These included:

- The effects of air, noise, vibration and lights from the increased numbers of trucks on main roads and other roads;
- The effects of noise from rail operations; and
- The impacts of light spill on the residents near the site.

Air, noise and vibration are addressed elsewhere. Light spill is addressed below.

#### Response

The effects of light spill were investigated in the EA (Chapter 16) and the Appendix I – Visual Assessment. The impacts of light spill were investigated to determine, in particular, the impacts at night. A preliminary lighting concept was developed for the purposes of modelling light spill. This concept comprised:

- Light poles spaced 80 m apart in the empty container and intermodal terminal areas, with fittings placed 25 m high;
- Illuminance levels set for safe operating procedures on the site; and
- Configuration of lights to direct onto the site and obtain minimum spillage into surrounding areas.

Light spill was modelled from the empty container areas at the northern and southern ends of the site as these would be the closest parts of the ILC to residences. Modelling results were compared against the

relevant standard *AS4282 – Control of Obtrusive Effects of Outdoor Lighting* recommended maximum obtrusive light levels. Recommended illuminance limits are strictest during "curfewed hours" (11pm and 6am). These are 4 lux at the boundary of commercial and residential areas, 2 lux within residential areas described as "light surrounds" and 1 lux in residential areas described as "dark surrounds".

Light spill (illuminance) levels were modelled in the vicinity of several of the nearest residences. The modelled light spill levels of 0.02, 0.01, 0.01, 0.02, and 0.00 lux are all considerably lower than the strictest of the limits listed in AS 4282, the light modelling indicating that the proposed lighting would be successful in containing light within the site. The light levels predicted at the nearest residential levels would be virtually imperceptible to people in those areas. The modelling showed that anywhere beyond approximately 140m from the site boundary would be subject to no measurable light spill.

AS 4282 also includes recommended limits for "luminous intensity" which relate to direct views of lights. The assessment of direct views of lights in the light spill assessment was undertaken qualitatively. Light fittings would be visible at night from most of the key viewpoints assessed. However, these would not be expected to change the night landscape as the lights would be focussed downwards and would be part of a landscape already containing a large number of light sources. It is unlikely given the downward focus of the proposed lighting, that direct views of lights would be regarded as obtrusive.

### 3.4.7 Socio-economic and Amenity

### **Issue Summary**

Although acknowledging the economic importance of NSW of being able to cater for an expected increase in containerized trade over the coming decades, many respondents were particularly concerned about the wider environmental and health impacts of vastly increasing the movement of freight in the region.

Many comments were received arguing that the site is completely unsuitable for such a facility, given its proximity residential areas and the adverse community and environmental impacts the redevelopment would create. It was suggested that there would be effects on the community, the environment and the roads. Dramatic increases in the number of trucks going along our roads and rail to and from the site as under the proposal will result in more traffic, more pollution, more noise, increased risk of road accidents and increased health risks.

Disruption to existing businesses during the construction phase was indicated and it was suggested some means of mitigating that disruption and the consequent loss of business needs to be considered either by way of condition or by State Government compensation. Additionally, there was concern about the future of local businesses once site operations commence, especially along the northern end of Cosgrove Rd and in Norfolk Rd east, all of which are heavily dependent upon on-street parking, should a future local area traffic management plan ban on street parking.

It was suggested that, given the demographic profile of Strathfield residents, it is unlikely that a great many job opportunities will be opened up by the presence of an intermodal terminal for locals. Further, employment is more likely to be of a "relocational nature" than new jobs created.

#### Response

The local government areas of Strathfield, Bankstown and Canterbury support a growing population which is ethnically diverse. These councils maintain a range of schools and community facilities within the local area, although none will be directly affected by the proposal.

The consequences of the development on air quality, noise and traffic operations (roads) are addressed elsewhere in detail in the EA and in this report. The EA Chapter 17 summarised the social impacts which may result from the proposal.

Noise resulting from the 24 hour site operations concerned many residents, and 'sleep arousal' was considered in the noise investigations. Instantaneous noise generated by industrial noise sources would be managed so as not to exceed the sleep arousal criteria at residences once all reasonable and feasible noise mitigation measures had been implemented, in accordance with the EMP.

It was noted that noise from site operations and truck movements could potentially affect areas in close proximity to the site, generally residences and industrial properties along Cosgrove Road and residential properties on the western side of Roberts Road. Noise during the operational stage would be managed through an Environmental Management Plan that would focus on noise reduction at source and the use of acoustic barriers. Further discussion is provided in the RT&A technical memorandum (Appendix F).

The traffic assessment found that there would be no significant impact generated by heavy vehicles using the ILC and that this traffic would use arterial and state roads to minimise noise impacts on local residents.

Air quality studies have shown that there will be no exceedances of air quality guidelines from vehicles visiting the site, vehicles used on the site or locomotives during operation. The surface of the proposed ILC is to be sealed, limiting opportunities for dust creation during operation. Modelling undertaken as part of this assessment identified that impacts in terms of particulate matter are considered insignificant. Furthermore, the studies demonstrate that increased vehicle movements on classified roads surrounding the proposed ILC site, which may experience increases and/or decreases in vehicle traffic as a result of the project, will not affect overall air quality in the area.

The consultation processes have identified community concerns regarding air quality, noise and risk of accidents which may have an impact on health. These issues have been reviewed in technical studies to identify the likely impacts and to develop management or mitigation measures. Concerns about the potential risks, real or perceived, could impact on health through anxiety or stress. The potential for psychological health impacts varies from individual to individual.

Stress and anxiety associated with perceived risks can be reduced through communication with the community to inform individuals about the management measures employed to minimise risks and to provide opportunities for feedback.

A key benefit provided by the proposed ILC site for the community is the employment opportunities it creates during both the construction and operation phases and the potential for stimulating commercial and light industrial activities within the surrounding industrial area.

### 3.4.8 Property Values

#### **Issues Summary**

Members of the community raised concerns that the development of the proposed ILC would have negative implications for property values.

#### Response

Property values over Sydney as a whole have been increasing and given the limited impacts associated with the proposal there are no reasons why the proposal would affect local property prices.

The site is in a derelict state and has not been extensively used since marshalling yard activities ceased. The surrounding area is also predominantly industrial and a more active industrial appearance on the proposed ILC site may be of some concern to local residents. In terms of impacts on visual amenity, visual analysis of the site identified that there would be limited views from the surrounding residential streets. As such the proposed ILC would have a low visual impact due to the long viewing distances. Noise mounds along the eastern boundary of the site would limit views from industrial premises along Cosgrove Road with visual improvements for residents in the southern end provided by the Community and Ecological Area. Landscaping would reduce visual impacts from the noise mounds.

Redevelopment of the site has the potential to encourage businesses associated with freight movement and intermodal activities into the surrounding industrial area. This may result in an increase in the number of operations associated with freight storage and handling and the potential replacement of unrelated businesses. A positive land use outcome is likely to result through encouragement of 'clean' development such as freight handling facilities.

### 3.4.9 Land Use

#### **Issue Summary**

Many submissions argued that the site is completely unsuitable for an intermodal facility given its proximity residential areas and the adverse community and environmental impacts the redevelopment would create.

#### Responses

The land is zoned for railway purposes and the surrounding area is predominantly industrial. Access from the site to the main road network is through industrial lands and impacts on residential areas will

be negligible. A series of mitigation and management measures are proposed to ensure that operation of the site will have a minimal impact on sensitive receivers.

### 3.4.10 Consultation Process

#### Issue Summary

The major issues raised by the community were:

- Residents were not consulted or informed adequately by Sydney Ports Corporation about the proposal. It was suggested that, during consultation with local residents, the community consultation information detailed in the Environmental Assessment had not been distributed;
- No effort has been made to make the information accessible in different languages. Given the cultural background of the local community and the high population of non-English speaking residents, this was regarded as of major concern; and
- There was a lack of adequate community or council consultation prior to the release of the EA during the summer holidays when the community was otherwise engaged.

#### Response

Community consultation process involved 1800 number, email, fax and address for any contact and questions throughout EA development process. A regularly updated web site also provided information about the project, the development process and the way by which the community could have its say.

Two community days were held - one in May 2005 to outline process of assessment and seek views from residents and groups, and a second in February 2006 during the exhibition of the EA.

Council briefings were held for Strathfield, Bankstown, Canterbury, Burwood and Marrickville at the beginning of the process and during the exhibition of the EA. Briefings were offered to a number of community groups. These were accepted by NOPE and the South West Environment Centre.

Three newsletters were widely distributed in the area, by direct mail distribution to about 11,000 households, via Councils and mailed to a database of business owners, community groups ands residents. The newsletters were distributed in March and June 2005 and in January 2006.

Advertisements concerning the open day were placed in local papers, including community language papers - Arabic, Vietnamese and Chinese. Interpreter facilities were offered and promoted in all communication material.

The exhibition period was decided and controlled by the Department of Planning. It lasted from 9 January to 20 February 2006, taking into account the holiday period, and accordingly was longer than the statutory period required under the Environmental Planning and Assessment Regulation.

Sydney Ports will continue to consult with the community during construction and operation of the ILC, should it be approved. It will provide for Community Liaison Groups throughout the construction and operation of the ILC, as part of this continued consultative process.

### 3.4.11 Community and Ecological Area

#### Issue Summary

Strathfield Council indicated the ecological area provides an opportunity to provide secure habitat for the Green and Golden Bell Frog if it is appropriately designed and linked into a network of habitat in Greenacre. The proposed Community and Ecological Area is a worthwhile concept and should be vested in Council ownership as Community land so it may be open to the general public with the exception of ecologically sensitive areas. The land should be protected with appropriate caveats on title and open space and environmental protection land zonings.

A detailed Landscape design of the Proposed Community and Ecological Area needs to be completed with input from Council. Considering the size and impact of this proposed development it is requested that the following contributions be made to the local community:

- the ownership of the proposed Community/Ecological Area is handed over to Council; and
- Sydney Ports contribute to the full cost of the ongoing maintenance of this facility.

#### Responses

SPC will consult with DEC and Strathfield Council over the management of the Frog Habitat Area. Opportunities for future ownership, land use zoning and management will be determined at a later date.

Landscape design and species planting would be prepared as part of the detailed design process. Species selected for the site would be endemic to the area and sourced from local provenance. SPC will consult Strathfield Council during the preparation of the detailed Landscape Plan.

### 3.4.12 Flora and Fauna

#### Issue Summary

Strathfield Council notes that the ILC site contains marginal habitat for Green and Golden Bell Frogs. They state that, although true, each individual lot in Greenacre contains marginal habitat. It is the combination of these sites that provides the total habitat. As such it is not appropriate to consider the site in isolation, but rather as a key component of a series of fragmented habitats that when considered together make up the total habitat. The Green and Golden Bell-frog recovery plan identifies this population as one of only 8 key populations in Sydney.

It is further stated that no baseline information is provided in the EA on the total population of Greenacre Bell Frogs and as such the overall goal or carrying capacity of the Ecological area is unknown. This needs to be coordinated and established between Sydney Ports, the Department of Environment and Conservation and Strathfield Council. Such consideration will assist in determining the balance between habitat and community functions in the ecological/community use area.

#### Responses

The Frog Management Plan will be prepared in consultation with DEC and Strathfield Council. Connectivity between frog habitats would be a key consideration when designing the Frog Habitat Area. It will be constructed according to the detailed design prepared, which would take into consideration the

carrying capacity and the area would be managed according to the Frog Management Plan. Monitoring of the Frog Habitat Area will be undertaken to ensure it is functioning as designed.

### 3.4.13 Site Soil Contamination

#### Issue Summary

Strathfield Council and DEC but refer to the need for a Remediation Action Plan (RAP) to be prepared prior to remediation work commencing. This should be prepared in accordance with DEC guidelines, SEPP 55 and the *Contaminated Land Management Act 1997*. The RAP should include provisions for inspection and validation of soils beneath existing structures when they are removed and any hotspots that are uncovered during site development works. Following remediation, all exposed surfaces are to be validated to ensure that all TPH, asbestos and heavy metal contamination has been removed.

Further investigations are required to determine the significance and extent of contamination in certain areas, including the area west of Stockpile 4 in regards to elevated concentrations of arsenic that exceed the Open Space criteria, and the DELEC site in regards to TPH and copper concentrations.

#### Responses

A RAP is to be prepared and identified contamination to be remediated prior to earthworks commencing. Soils from beneath removed buildings would be visually inspected and testing undertaken if evidence of contamination is present or if the soils are observed to be different from the surrounding area.

Validation testing of remediated hotspots and all exposed surfaces is to be undertaken to ensure contaminant levels are below threshold levels defined within the RAP.

Further investigations are to be undertaken into the contamination hotspot (Arsenic) within the proposed Community and Ecological area to determine the significance and extent of the elevated levels prior to assessing remediation options. The copper and TPH hotspots identified in the remainder of the site are to be remediated through excavation and disposal (Copper) and landfarming (TPH).

### 3.4.14 Site Design and Management

#### **Issue Summary**

Issues of site design and management require Sydney Ports to design the site according to relevant Council or State Government guidelines.

#### Responses

Chapter 5 of this report outline the requirement to prepare environmental management plans for both construction and site operation.

### 3.4.15 Drainage and Hydrology

#### Issue Summary

Strathfield Council and a number of community members indicated concern over the effects of the project on flooding within the Coxs Creek and Cooks River catchment, and issues associated with water quality downstream of the site.

### Responses

The ILC site will not provide a solution for existing stormwater problems external to the site, nor will they be studied in any detail. However, the basic principle that the development shall have no external impacts for the accepted ARI events will be applied. Flooding issues would be considered during preparation of hydrological and drainage plans as part of the detailed design phase.

Stormwater runoff management has been satisfactorily discussed in the EA. It will be addressed in detail during the detailed design phase. It should be noted that a detention basin would be constructed at the southern end of the site, immediately north of Coxs Creek. This would also be used to treat run off prior to discharge. The detention basin would be designed to ensure post development peak flows do not exceed pre-development peak flows. The performance of the basin system will be maintained by SPC.

Stormwater, runoff and management were addressed in the EA in Chapter 10. More detailed studies will be undertaken as part of the detailed design.

### 3.4.16 Heritage and Archaeology

#### **Issues Summary**

The Strathfield District Historical Society, Strathfield Council and the Heritage Office provided substantial submissions on heritage issues. Other comments were also received from community members. In its submission, Council indicated:

- The former Enfield Marshalling Yards site as a whole is of heritage significance in illustrating the history and former use of the site and a comprehensive development history and historical survey of the site is required before further demolition or relocation occurs;
- The surviving significant historic built elements which contribute to the historic legibility of the site should be preserved on site. For example, the Administration Building and Yard Masters Office should be retained and utilised as part of the site operations and the pillar water tank, gantry crane and pedestrian footbridge should be relocated to contextually appropriate locations within the site;
- The Tarpaulin factory is not well regarded by the nearby residents. It is feasible to relocate one or both sections of the former Tarpaulin Factory without substantial loss of significance, particularly as it is a reassembled building.

The Strathfield District Historical Society requested the retention and reuse of the Administration Building, the Yard Master's Office and Tarpaulin Factory on site.

The submission by the Heritage Office indicated:

- The Applicant should be asked to provide more information about the conservation and adaptive reuse of the two items of State significance (Tarpaulin Factory and Pillar Tank) on site, in particular the Tarpaulin Factory;
- The items of Local significance- namely the Pedestrian footbridge and Wagon Repair Shed should be ideally retained on site. Their contribution to the significance of the former Marshalling Yards as a whole should be taken into consideration. In this respect the applicant should be asked to explore alternative options to retain and adaptive reuse of these items within the site. The proposed Community and Ecological Area, for example, may be considered as an alternative location;
- The former Yard Master's Office has been assessed as having low heritage significance in the AHI because it has lost much of its heritage significance through the modifications to the building and removal of its significant elements. Given that this item has lost most of its original details the HO does not object to the demolition of the former Yard Master's Office. However full archival recording of this item or any other heritage item on the site that is to be demolished or relocated should be undertaken in accordance with the NSW HO guidelines. Removal to another site altogether should be considered as a last resort after considering all other options and if their retention on site is not possible because of the operation requirements of the ILC. If relocation of these items to a 'railway heritage organisation' is the only viable option, the applicant should be asked to explore possible locations and undertake necessary procedural steps with the relevant organisations before approval is given to the proposed development;
- The Applicant should be asked to prepare a heritage interpretation plan and strategy for the whole site prior to commencement of works. This should be prepared in consultation with Heritage Office and in accordance with Heritage Office guidelines. The approved interpretation plan shall be imparted at an appropriate location for public appreciation for example at the proposed community and ecological area;
- The report does not assess the impacts of the proposed development on the potential European archaeological relics on the site. The applicant should be asked to investigate the impact of the proposed development on the potential archaeological significance of the site. The assessment should be accompanied by an archaeological research design and appropriate mitigation techniques, and should be ideally undertaken prior to the issue of the consent as the findings of this assessment may result in some recommendations to the proposed design. It is requested that upon the result of these studies appropriate conditions regarding the prevention of the potential archaeological remains and their appropriate management should be included within the conditions of consent should approval be granted.

### Response

Reuse or relocation options for the Tarpaulin Factory and Pillar water tank will be further investigated as part of the detailed design phase of the project. The Tarpaulin Factory will be stabilised against further deterioration and, in consultation with the Heritage Office and the community, options for its reuse at its present site will be investigated. Only if on-site reuse is found to be unachievable or unacceptable will consideration be given to its relocation off-site to a railway heritage museum or

demolition. The Pillar water tank will be subject to further work to repair it and choose and area for its relocation on-site. The relocation will be undertaken as early as practicable in the construction program.

Due to the nature of activities to occur on the site reuse of the Yard Master's Office is not possible. The Yard master's office cannot be reused on-site or realistically offered to a railway heritage organisation due to its brick structure. Full archival recording of the Yard Master's Office would be undertaken prior to demolition, according to Heritage Office guidelines. The footbridge is to be reused on site, if possible. Further studies will be undertaken prior to construction commencement, to determine the feasibility and location of this item.

Due to extensive termite damage in the wagon repair shed very few elements are fit for reuse. This will be evaluated and investigations undertaken to determine if some elements of this structure may be able to be reused on site. Reuse opportunities will be incorporated into the design. Reuse of part of the footbridge and elements of the wagon repair shed within the Community and Ecological Area would be considered during the detailed design stage, and relocation work undertaken during the construction phase of the project. If during the detailed design, it is established that reuse of heritage items on site is not an option, then the items would be offered to external heritage organisations.

A heritage interpretation plan and strategy for the entire site will be undertaken by Sydney Ports prior to construction works commencing on site. An archaeological assessment for indigenous and non-indigenous heritage was undertaken by Navin Officer in 2001. The report was referenced by Graham Brooks and Associates (Appendix H to the EA). The indigenous studies in the Navin Officer report were updated for this project, but no changes were warranted for the non-indigenous aspects of the report. This 2001 report will be provided to the Department of Planning.

The Navin Officer report concluded that, "given the picture of massive disturbance across the site, it is unlikely that significant archaeological deposits remain on the site. The only possibility is that some deposit may have been sealed under extant buildings or slab foundations. Even so, it is unlikely that such deposits have the potential to tell us more about this site or the construction of what are relatively well documented buildings". Limited archaeological testing is recommended for the area of the Wagon Repair Shed and the Yard Master's Office, and this will be undertaken.

# 4. Statement of Commitments

### 4.1 Introduction

The environmental impacts of the proposal have been assessed in the Environmental Assessment (EA) report and measures to manage those impacts were outlined in the form of a statement of commitments. These mitigation measures, along with any conditions of approval issued by the Minister for Planning, would be incorporated into the detailed design, as well as where appropriate, the preparation of construction and operational Environmental Management Plans (EMPs) and sub-plans for the project.

The following sections provide an updated statement of commitments, incorporating responses to comments from relevant Government agencies, Local Government and the community, as well as responses from the Independent Panel which has provided an assessment of the proposal.

Sydney Ports Corporation proposes to construct and operate the ILC at Enfield as described in Chapter 4 of the Environmental Assessment (EA) report, subject to the modifications described in Section 2.2 of this Preferred Project Report (PPR).

### 4.2 Construction Environmental Management and Mitigation

Environmental management commitments proposed during the construction phase are shown in **Table 4-1** below. These commitments include the preparation of a construction EMP (CEMP) which would be required prior to any construction activities commencing. The CEMP would detail operating conditions and temporary environmental protection measures to mitigate the impact of construction activities. Other commitments may form part of the terms of contract with the companies or consortium responsible for the project construction, or may be further assessed at the detailed design stage.

| Objective                                                                    | Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
|------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Environmental Management                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |
| Manage hours of construction<br>work to minimise impacts on<br>the community | Proposed hours of construction are 7.00am – 6.00pm Monday to Saturday, with no work on Sundays or public holidays. SPC will seek to maintain these construction times as specified in the EA. However, an undertaking is provided, and will be written into the Noise Management Plan, that high noise operations will not be undertaken after 1pm on Saturdays.                                                                                                                                                                                       |  |  |
|                                                                              | The construction EMP will outline protocols for notifying relevant authorities<br>and local residents prior to any works occurring out of normal construction<br>hours. Out of hours work will be required under certain circumstances e.g. to<br>minimise impacts on active operational services (e.g. connection to live sewer,<br>water and electrical services), to minimise impacts on existing traffic, to<br>respond to emergencies, and unavoidable construction constraints (e.g. long<br>concrete pours, overhead rail bridge construction). |  |  |
| Minimise impacts of ILC<br>construction on amenity in<br>surrounding areas   | A Construction Environmental Management Plan (CEMP) would be prepared<br>and implemented to guide construction activities as outlined below in the<br>following areas:                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
|                                                                              | <ul> <li>Road Traffic &amp; Transport</li> <li>Air Quality</li> <li>Works on RailCorp land</li> <li>Soils &amp; Contamination</li> <li>Hydrology &amp; Water Quality</li> </ul>                                                                                                                                                                                                                                                                                                                                                                        |  |  |

| Table 4-1: Environmental | Management | Commitments - | <b>Design and</b> | Construction |
|--------------------------|------------|---------------|-------------------|--------------|
|                          |            | ••••••        |                   |              |

| Objective                                                           | Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |

|                                                                    | Contamination risks during site works would be assessed and where there is a risk of contamination exposure or mobilisation, appropriate measures would be taken.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |
|                                                                    | Validation testing of final exposed surfaces and remediated areas will be undertaken in accordance with DEC guidelines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |
|                                                                    | Notification will be provided to Council as required under SEPP 55 for remediation works undertaken on the site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |  |
| Hydrology and Water Quality                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |  |
| No increased sedimentation of<br>nearby waterways                  | A Soil and Water Management Plan (SWMP) will be prepared and implemented to reduce the potential water quality impacts from the site during construction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |
|                                                                    | General measures to control erosion of soil and sedimentation would be<br>implemented prior to construction works. These measures would be prepared<br>in accordance with the principles and practices in <i>Soils and Construction</i><br>(Landcom, 2004) and would be maintained and monitored during the<br>construction phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |  |
| Noise and Vibration                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |  |
| Minimise construction noise<br>impact on surrounding<br>residences | <ul> <li>An Environmental Noise Management Plan (ENMP) would be prepared and implemented prior to the commencement of works to achieve compliance with DEC criteria where reasonable and feasible. This Plan would include:</li> <li>Application of physical noise controls to construction equipment, equipment maintenance and utilising "best practice" technology to achieve low levels of construction noise emissions;</li> <li>Noise compliance monitoring for all major equipment and activities on site;</li> <li>Erection of temporary noise attenuation barriers where necessary and practicable;</li> <li>Construction of noise barriers/acoustic mounds as appropriate for the location and type of construction activities as early as practicable in the program;</li> <li>The planning of noisy activities for parts of the day when they would have the least impact;</li> <li>Communication between the community and the construction management to be provided at the start of the works and maintained during the works. This will include a 24 hour complaints handling system and advice to the community prior to undertaking any out-of-hours work;</li> <li>Investigative monitoring of noise in response to specific complaints.</li> </ul> |  |  |  |
| Heritage                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |  |
| Management of heritage items                                       | Reuse and relocation options for the Tarpaulin Factory and Pillar water tank will be further investigated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |  |
|                                                                    | The Tarpaulin Factory will be stabilised against further deterioration and, in consultation with the Heritage Office and the community, options for its reuse at its present site will be investigated. Only if on-site reuse is found to be unachievable or unacceptable will consideration be given to its relocation offsite to a railway heritage museum or demolition. If demolished, the tarpaulin Factory will be archivally recorded.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |
|                                                                    | The Pillar water tank will be subject to further work to repair it and choose an area for its relocation on-site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |
|                                                                    | Full archival recording of the Yard Master's office will be undertaken prior to demolition, according to Heritage Office guidelines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |

| Objective                                                                                                                                       | Action                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |  |
|-------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
|                                                                                                                                                 | Reuse of part of the footbridge and elements of the wagon repair shed within<br>the Community and Ecological Area will be considered and relocation<br>undertaken. If it is established that reuse of these items on site is not an option,<br>then the items will be offered to external heritage organisations.                                                                                                          |  |  |  |
|                                                                                                                                                 | A heritage interpretation plan and strategy for the entire site will be undertaken<br>prior to construction works commencing on site. Prior to relocation or<br>demolition of any structures listed for relocation or demolition, those structures<br>will be appropriately recorded and the recording reports lodged with the Local<br>Studies Collection of Strathfield Public Library.                                  |  |  |  |
| Determine the presence of archaeological sites (non indigenous)                                                                                 | Limited archaeological testing was recommended for the area of the Wagon<br>Repair Shed and the Yard Master's Office. This will be undertaken according to<br>Heritage Office Guidelines during demolition of the structures.                                                                                                                                                                                              |  |  |  |
| Protection of Indigenous<br>Heritage relics if uncovered                                                                                        | In the unlikely event that artefacts of indigenous heritage significance are<br>uncovered during the course of construction, works in the immediate area<br>would cease, DEC would be notified and expert advice would be sought from<br>an appropriately gualified professional.                                                                                                                                          |  |  |  |
| Flora and Fauna                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |
| Provide secure habitat for the Green and Golden bell Frog                                                                                       | A Frog Habitat Area is proposed to be constructed as part of the Community<br>and Ecological area at the southern part of the site. The area will be designed<br>by qualified personnel and will comprise ponds, foraging and shelter habitat.<br>Frog movement corridors would also be identified to link the new habitat areas<br>with existing frog habitat areas offsite.                                              |  |  |  |
| Minimise likelihood of direct<br>impacts to threatened species                                                                                  | During site works existing areas of potential frog habitat would be checked and<br>any frogs found removed prior to works commencing. Frog exclusion fences<br>will be provided during construction in areas where there is potential for frog<br>activity.                                                                                                                                                                |  |  |  |
| Landscape and Visual                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |
| Improve and manage<br>landscaping                                                                                                               | A Landscape Management Plan (LMP) will be prepared during detailed design<br>of the project and implemented during and after the construction period. The<br>plan would include:                                                                                                                                                                                                                                           |  |  |  |
|                                                                                                                                                 | <ul> <li>processes for the management of the on-site weeds;</li> <li>detail on the rehabilitation of the site with a program of weed removal and revegetation with native species. Noxious weeds at the ILC site would be identified and be removed in accordance to the criteria under the <i>Noxiou</i>. <i>Weeds Act 1993</i>, and the relevant NSW Department of Primary Industrie weed control guidelines;</li> </ul> |  |  |  |
|                                                                                                                                                 | <ul> <li>Monitoring of vegetation to ensure it becomes established and to identify<br/>any further management requirements.</li> <li>Landscaping to be detailed and carried out in accordance with the concepts in<br/>the Landscape Masterplan.</li> </ul>                                                                                                                                                                |  |  |  |
| Minimise visual impacts during construction                                                                                                     | Landscaping and noise mounds would be installed in the early stages of construction to screen the site to a degree appropriate for the location and type of construction activities being carried out. Revegetation of these areas would be conducted as soon as practicable during the construction phases.                                                                                                               |  |  |  |
| Waste Management                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |
| Minimise waste generated and<br>maximise re-use and<br>recycling. Waste disposal to<br>be undertaken when re-use<br>and recycle is not possible | <ul> <li>Measures to minimise waste including the use of clean excavated material as fill for site levelling and road works, the re-use of excavated material not suitable for construction purposes for noise mounds or landscaping where practicable, and contaminated soils to be remediated</li> </ul>                                                                                                                 |  |  |  |

|                                           | <ul> <li>A complaints handling procedure to address and respond to issues raised<br/>by the community, including investigative monitoring of construction traffic<br/>and noise in response to specific complaints;</li> </ul>                                                                                                         |  |  |  |
|                                           | <ul> <li>Working with the ILC Traffic Working Group to implement Construction<br/>Traffic Management Plans.</li> </ul>                                                                                                                                                                                                                 |  |  |  |
|                                           | Liaison will occur with the community regarding the future use of Tarpaulin<br>Factory and Community and Ecological Area. Should a viable future use of the<br>Tarpaulin Factory not be determined once investigations have been made, the<br>item shall be recorded and offered for relocation to a railway heritage<br>organisation. |  |  |  |

### 4.3 Operational Environmental Management and Mitigation

Mitigation and other environmental management measures identified in the EA and relevant to the operational phase of the project are summarised in **Table 4-2**. These include the preparation of a site Operational Environmental Management Plan (OEMP) which would be required prior to ILC operations commencing. The OEMP would detail on-going operating conditions and protection measures to mitigate the impact of site operations. Relevant measures would be detailed, as appropriate, in the relevant OEMP to be prepared by site tenants or lessees. Others may form part of the terms of contract with tenants or lessees, or may be further assessed at the detailed design stage.

In addition, tenants / lessees may be required to develop separate OEMPs for activities within leased areas. This would ensure that the environment is adequately protected during site operations and that adverse impacts are avoided or otherwise substantially ameliorated.

The OEMP would be updated as required to reflect any changes in the operation of the site or regulatory requirements.

#### Table 4-2: Environmental Management Measures – Operational

| Objective                                                                            | Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |  |
|--------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Environmental Management                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |
| Minimise impact of ILC<br>operations on surrounding<br>area                          | <ul> <li>An Operational Environmental Management Plan (OEMP) would be prepared<br/>and implemented to guide operational activities. It would include:</li> <li>Environmental Management</li> <li>Road Traffic &amp; Transport</li> <li>Air Quality</li> <li>Chemicals storage and handling</li> <li>Hydrology &amp; Water Quality</li> <li>Noise &amp; Vibration</li> <li>Heritage</li> <li>Flora &amp; Fauna</li> <li>Landscape &amp; Visual</li> <li>Waste Management</li> <li>Energy and Greenhouse</li> <li>Water Consumption</li> <li>Emergency Response</li> <li>Rail Operations</li> <li>Community Consultation</li> <li>Environmental Reporting</li> </ul> All plans and strategies would be developed in consultation with the relevant<br>agencies. Sydney Ports would undertake a sustainability assessment of the<br>operational aspects of the ILC to determine and develop appropriate strategies<br>to minimise environmental impacts. These would be outlined in the OEMP. |  |  |  |
| General                                                                              | <ul> <li>The OEMP would provide for regular monitoring and periodic performance reviews of the key performance criteria for noise and traffic established for the operation of the ILC. Reviews will be undertaken when throughput reaches 100,000 TEU, 200,000 TEU and at capacity. Noise and traffic performance parameters would be established in the OEMP. The examination and interpretation of results will be undertaken by a suitably qualified professional and any agreed actions implemented within a reasonable timeframe, as defined in the OEMP.</li> <li>Hours of operation are 24 hours per day, 7 days per week for the ILC site, comprising the Intermodal terminal, warehousing and empty container storage yards.</li> <li>Hours of operation for the Light Industrial and Commercial Area are 7:00am – 7.00pm 7 days per week</li> </ul>                                                                                                                             |  |  |  |
| Road Traffic and<br>Transport                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |
| Minimise the impact of ILC<br>operational traffic on the<br>surrounding road network | <ul> <li>An operational traffic management plan will be implemented to:</li> <li>Ensure, to the satisfaction of the RTA, that the proportion of ILC heavy vehicles generated by the ILC does not unreasonably impact upon the Cosgrove Road/Hume Highway intersection during morning and afternoor peak periods. That is, prior to commencement of the ILC operations, SPC will provide a manual or technological solution to control the frequency of the ILC articulated and B double trucks during morning and afternoon peak periods;</li> <li>As part of this solution daily log sheets for vehicle identification will be maintained. Advanced queue detector systems will be installed and an internal diversion plan developed to prevent any additional loading on</li> </ul>                                                                                                                                                                                                     |  |  |  |

| Objective                                      | Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |  |
|------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Objective                                      | <ul> <li>Cosgrove Road (it having reached an assigned unacceptable level at a designated location on that road). Alternatively, another recording arrangement acceptable to the RTA will be implemented.</li> <li>Upgrade works will be provided to the intersection of Roberts Road and Norfolk Road, following detailed design approval by the RTA. That is, prior to construction, the detailed design of the following upgrade works will be provided to the RTA for approval. The works will include:</li> <li>Extending the Roberts Road northbound right turn bay to 150 metres;</li> <li>Providing a southbound slip lane into Norfolk Road. (The slip lane length to be as long as possible);</li> <li>Providing a diamond phasing operation on Norfolk Road to ensure right turn movements can be carried out in a controlled and safe environment;</li> <li>Reconfiguring Norfolk Road east to provide a right turn bay of substantial length. In the new design right turn bays in Norfolk Road should face each other;</li> <li>Provide three lanes for exiting traffic (including right turn bay) from Norfolk Road;</li> <li>It is noted that the on-street parking on the southern side of the eastern arm of Norfolk Road approaching Roberts Road detrimentally affects the efficiency of the intersection. The queued right turning vehicles. In addition to widening the eastern arm of Norfolk Road approaching Roberts Road detrimentally affects the efficiency of the intersection. The queued right turning vehicles. In addition to widening the eastern arm of Norfolk Road approaching Roberts Road, parking will be prohibited for a distance of 50 metres.</li> <li>The final design will meet RTA's Traffic Signal Design Standards and Principles.</li> </ul> |  |  |  |
|                                                | 2. Introducing Local Area Traffic Management measures to minimise impacts<br>on local amenity through a multi-layered approach, including physical barriers,<br>route restrictions (3 tonne limits) and penalties for transgressions, in<br>consultation with Bankstown Council, Strathfield Council and the RTA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |  |
| Air Quality                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
| Minimise emissions from plant<br>and equipment | Equipment to be maintained to ensure the best environmental performance in terms of air emissions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |
| Chemicals Storage & Hand                       | ing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |  |
| Minimise risk of future<br>contamination.      | <ul> <li>Operations to be managed to ensure potentially contaminating materials are stored and handled in an appropriate manner, according to relevant Australian Standards, to minimise future contamination risk to surface water, soils and groundwater. Where applicable the storage and handling will comply with, amongst other things: <ul> <li>AS 1940 2004: The Storage and Handling of Flammable and Combustible Liquids; and</li> <li>AS 4452 1987: The Storage and Handling of Toxic Substances.</li> </ul> </li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |  |
| Minimise risk of on site incidents             | The Intermodal Terminal operator will be required to prepare and implement<br>operating procedures for the management of dangerous goods through the<br>terminal. The management plan will address any load /unload procedures<br>/precautions/priorities, storage areas, separation of different classes and in<br>some cases separation from boundaries and other tenants/leased areas,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |  |

|                                                                   | <ul> <li>A complaints handling procedure to address and respond to issues raised<br/>by the community, including investigative monitoring of traffic and noise<br/>in response to specific complaints;</li> </ul>                                                                                                                                                                                                                                                 |  |  |
|                                                                   | <ul> <li>Working with the ILC Traffic Working Group to implement Local Traffic<br/>Management Plans.</li> </ul>                                                                                                                                                                                                                                                                                                                                                   |  |  |
| <b>Environmental Reporting</b>                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |
| Provide clear and appropriate communication about site operations | During operation, environmental performance and progress will be<br>incorporated as necessary into the respective corporate environmental<br>reporting of Sydney Ports and the site operators. The reports would ensure<br>relevant authorities have access to important environmental information<br>relating to the new facility. Any shortcomings in environmental performance<br>identified by the reporting process would be addressed by updating the EMPs. |  |  |

|                |                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | ID          |                  |
| Air Quality    | The building of the ILC is substantial and will result in a large increase in semi trailer truck movements in the Enfield area. Since the Enfield and surrounding areas are predominantly residential, this will result in a number of detrimental effects including air pollution. | Traffic generation during operation is addressed in EA<br>Report Chapter 7. The air quality assessment provided<br>in EA Report Chapter 12 identifies that the incremental<br>increase in emissions from trucks in the adjacent roads<br>would not result in exceedance of air quality guidelines.                                                                                                                                                                                                                                                                  | 631         | Submission No 42 |
| Air Quality    | I already receive my fair share of dust, dirt and filth every<br>single day from the industrial surrounds as well as from the<br>traffic and from building sites going up on every spare<br>patch of land. No more dirt and filth thanks.                                           | The potential for increase in dust during construction<br>and operation is addressed in Chapter 12. This<br>assessment shows that the expected PM10 (24 hour<br>average and all hours average) are within NSW EPA air<br>quality criteria.<br>A Dust Management Plan would be implemented during<br>construction, no significant air quality impacts are<br>expected from dust deposition, with dust mitigation<br>measures in place. An Operational Environmental<br>Management Plan would provide a program for ongoing<br>management of traffic and air quality. | 585         | Submission No 3  |
| Air Quality    | We are already subject to a lot of smell                                                                                                                                                                                                                                            | There is no potential for increased odours from the proposal. The potential for air quality impacts during construction and operation are addressed in Chapter 12.                                                                                                                                                                                                                                                                                                                                                                                                  | 706         | Submission No 77 |
| Air Quality    | These operations will result in increased airborne pollution                                                                                                                                                                                                                        | The air quality assessment provided in Chapter 12<br>identifies that the incremental increase in emissions<br>would not result in exceedance of the NSW EPA air<br>quality objectives. An Operational Environmental<br>Management Plan would provide a program for ongoing<br>management of traffic and air quality.                                                                                                                                                                                                                                                | 686         | Submission No 73 |
| Air Quality    | At Potts Hill Sydney Water has two reservoirs two puffs of wind away from the proposed site.                                                                                                                                                                                        | The air quality assessment provided in Chapter 12<br>identifies that the incremental increase in emissions<br>would not result in exceedance of the NSW EPA air<br>quality objectives. An Operational Environmental<br>Management Plan would provide a program for ongoing<br>management of traffic and air quality.                                                                                                                                                                                                                                                | 649         | Submission No 65 |
| Air Quality    | I have two young children who suffersfrom asthma and<br>associated allergies, this extra pollution accumulate in the<br>air will generally affect their health and the health of other<br>neighbours who live in this area.                                                         | The potential for air quality impacts during construction<br>and operation are addressed in Chapter 12. The<br>potential for impacts of air quality on health are also<br>considered in the socio economic assessment in<br>chapter 17. Air quality will be able to achieve guidelines<br>and there should therefore be no effects on public<br>health. An Operational Environmental Management<br>Plan would provide a program for ongoing management<br>of traffic and air quality.                                                                               | 646         | Submission No 62 |

An Operational Environmental Management<br>Plan would provide a program for ongoing management<br>of traffic and air quality.                                                                                                                                                                                                                                                                                                                                                                                                     | U ID        |                        |
| Air Quality    | I have two young children who suffers form asthma and<br>associated allergies, this extra pollution accumulate in the<br>air will generally affect their health and the health of other<br>neighbours who live in this area.                                                   | The potential for air quality impacts during construction<br>and operation are addressed in Chapter 12. The<br>potential for impacts of air quality on health are also<br>considered in the socio economic assessment in<br>chapter 17. Air quality will be able to achieve guidelines<br>and there should therefore be no effects on public<br>health. An Operational Environmental Management<br>Plan and a Construction Environmental Management<br>Plan would provide a program for ongoing management<br>of traffic and air quality. | 620         | Submission No 27 & 306 |
| Air Quality    | I have two young children who suffers from asthma and<br>associated allergies, this extra pollution accumulate in the<br>air will generally affect their health and the health of other<br>neighbours who live in this area.                                                   | The potential for air quality impacts during construction<br>and operation are addressed in Chapter 12. The<br>potential for impacts of air quality on health are also<br>considered in the socio economic assessment in<br>chapter 17. Air quality will be able to achieve guidelines<br>and there should therefore be no effects on public<br>health. An Operational Environmental Management<br>Plan and a Construction Environmental Management<br>Plan would provide a program for ongoing management<br>of traffic and air quality. | 633         | Submission No 46       |
| Air Quality    | I have two young school going girls. One of them suffers<br>from asthma. She is allergic to dust and fuel exhaust.<br>Because of the excessive traffic, more pollution will<br>accumulate in the air and will generally affect the health of<br>my children and neighbourhood. | The potential for air quality impacts during construction<br>and operation are addressed in Chapter 12. The<br>potential for impacts of air quality on health are also<br>considered in the socio economic assessment in<br>chapter 17. Air quality will be able to achieve guidelines<br>and there should therefore be no effects on public<br>health. An Operational Environmental Management<br>Plan and a Construction Environmental Management<br>Plan would provide a program for ongoing management<br>of traffic and air quality. | 800         | Submission No 146      |
| Air Quality    | Enfield and surrounding areas are predominantly<br>residential this will result in a number of detrimental effects<br>including, air pollution.                                                                                                                                | Air quality impacts of construction and operation of the<br>ILC are addressed in Chapter 12. As with most<br>construction activities, there is the potential for dust and<br>air quality impacts. Modelling of potential air quality at a<br>number of sensitive receptors was undertaken as part of<br>this assessment. The results indicate that no significant<br>air quality impacts are expected from dust deposition,<br>with dust mitigation measures in place or form other<br>pollutants.                                        | 786         | Submission No106       |
| Air Quality    | Trains and trucks emissions, dust form the vast number of movements per day                                                                                                                                                                                                    | Traffic generation during operation is addressed in<br>Chapter 7 and rail traffic in Chapter 8. The air quality<br>assessment provided in Chapter 12 identifies that the<br>incremental increase in emissions would not result in<br>exceedance of the NSW EPA air quality objectives. An<br>Operational Environmental Management Plan would                                                                                                                                                                                              | 512         | Submission No 45       |

|                |                                                                                                                                                                                                                                                                                                                                                              | provide a program for ongoing management of traffic and air quality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                   |                                            |
| Air Quality    | Noise and air pollution and traffic congestion will increase<br>and fifty suburbs all over Sydney will be affected, including<br>suburb in the Canterbury Local Government Area where I<br>live.                                                                                                                                                             | Removal of a portion of traffic from the roads has the<br>potential to reduce traffic growth related impacts on a<br>regional basis. Noise, air quality and traffic are<br>addressed in Chapters 11, 12 and 7 of the EA report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 789               | Submission No 113                          |
| Air Quality    | I object on the basis that The pollution from trucks going in<br>and out from the terminal every day. The air quality in the<br>affected suburbs will reduce dramatically.<br>The extra dirt grime and dust which would be produced with<br>the extra amount of trucks on the roads affecting residents.                                                     | Traffic generation during operation is addressed in<br>Chapter 7. The air quality assessment provided in<br>Chapter 12 identifies that the incremental increase in<br>emissions would not result in exceedance of the NSW<br>EPA air quality objectives.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 630               | Submission No 39 & 98                      |
| Air Quality    | Just remember this I have had problems already and you<br>must know the EIS has failed to take into account weather<br>conditions. Winds form the North East to Easterly have a<br>huge effect on my house. So noise dust and odours from<br>the ILC will be blown through my front door.                                                                    | The potential for increase in dust during construction<br>and operation is addressed in Chapter 12. This<br>assessment shows that the expected PM10 (24 hour<br>average and all hours average) are within NSW EPA air<br>quality criteria. During particular wind conditions, the<br>dust from construction will be able to be managed by a<br>"real time" monitoring program and reactive<br>management.                                                                                                                                                                                                                                                                                                                                          | 539               | Georgopoulos, Mr Peter<br>Submission No 35 |
| Air Quality    | Roberts Rd is an "EXPRESS" not a road for more trucks that fly past the homes creating dust                                                                                                                                                                                                                                                                  | Traffic generation during operation is addressed in<br>Chapter 7. The air quality assessment provided in<br>Chapter 12 identifies that the incremental increase in<br>emissions would not result in exceedance of the NSW<br>EPA air quality objectives.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 622               | Submission No 31 & 100                     |
| Air Quality    | The increased traffic volume will also affect the air quality in<br>local streets. Already I'm seeing the dust and soot falling on<br>my house, not to mention my vegetable garden. If the<br>Sydney Port project is approved and my or my children's<br>health are affected by the increased poor air quality I am<br>prepared to take this matter further. | Traffic impacts are assessed in Chapter 7 of the EA<br>report. Trucks would be prevented from using local<br>roads, enforced through various construction and<br>operation traffic management plans.<br>The potential for increase in dust during construction<br>and operation is addressed in Chapter 12. This<br>assessment shows that the expected PM10 (24 hour<br>average and all hours average) are within NSW EPA air<br>quality criteria.<br>A Dust Management Plan would be implemented during<br>construction, no significant air quality impacts are<br>expected from dust deposition, with dust mitigation<br>measures in place.<br>Potential health impacts from the proposed ILC<br>development are further addressed in Chapter 17 | 598               | Submission No 22                           |

|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------------------|
| Air Quality    | Diesel trucks are a significant contributor to air pollution<br>and the exhaust emissions are carcinogenic. By locating a<br>freight terminal in this area we are sure to see significant<br>increase in the level of toxins and resulting impacts on the<br>health of local residents. The freight terminal will<br>concentrate truck numbers and movements in our local<br>community resulting in higher air pollution.                                                                                                                                                        | Traffic impacts are assessed in Chapter 7, in which<br>modelled future traffic volumes around the site are<br>provided. Air quality impacts are addressed in Chapter<br>12. This identifies only marginal increases in PM10 and<br>NO2 concentrations from off site vehicle traffic, these<br>are below NSW EPA criteria.<br>Potential health impacts from the proposed ILC<br>development are further addressed in Chapter 17.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 596         | Submission No 19        |
| Air Quality    | There will be more pollution. One can smell fumes in the atmosphere when going outside.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Traffic impacts are assessed in Chapter 7, in which<br>modelled future traffic volumes around the site are<br>provided. Air quality impacts are addressed in Chapter<br>12. | Air Quality    | The development could cause many hazardous implications such as: odour issues from hazardous pollutants and dust in the atmosphere                                                                                                                                                                                                                                                                                                                                                                                                                                               | Potential health impacts from the proposed ILC development are further addressed in Chapter 17.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 810         | Submission No 168       |
| Air Quality    | Polluting emissions from train engines and trucks, is a concern. There is no consideration of air quality impacts. It is our understanding that there are no legislated restrictions on emissions from diesel train engines. This could have a significant health impact for Sydney residents through exposure to the deposition of particulate matter and toxins from these engines that are known be detrimental to the respiratory and cardiovascular health and longevity of residents, especially the very young and the elderly, or those with existing health conditions. | Traffic generation during operation is addressed in<br>Chapter 7 and rail traffic in Chapter 8. The air quality<br>assessment provided in Chapter 12 deals with site<br>construction, operations and trucks. It identifies that the<br>incremental increase in emissions would not result in<br>exceedance of the NSW EPA air quality objectives. An<br>Operational Environmental Management Plan would<br>provide a program for ongoing management of traffic<br>and air quality. Potential health impacts from the<br>proposed ILC development are further addressed in<br>Chapter 17.<br>The appropriate approach to the management of effects<br>from the rail freight line through is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor. | 447         | Submission No 315 & 158 |
| Air Quality    | Heavy traffic conditions have lead to major air pollution in the area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Traffic impacts are assessed in Chapter 7, in which<br>modelled future traffic volumes around the site are<br>provided. Air quality impacts are addressed in Chapter<br>12. This identifies only marginal increases in PM10 and<br>NO2 concentrations from off site vehicle traffic, these<br>are below NSW EPA criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 829         | Submission No 245       |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Stakeholder | Name                    |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ID          |                         |
| Air Quality    | To give but a few examples: with respect to air quality, too<br>much is excluded from the assessment (eg cumulative<br>effects of locomotive fumes) whilst data on far away<br>locations is included for modelling purposes. Reference is<br>made to Strathfield Council's submission with respect to<br>concerns about the credibility/validity of air quality<br>assessment. The EA contends that the highest risk of air<br>quality impacts during the operational phase are likely to<br>occur from road and rail exhaust emissions(v3 p AQA p8)<br>However, in line with the general methodology the EA<br>concludes that the operation of the intermodal terminal,<br>narrowly interpreted on-site impacts, will not add<br>significantly to the existing situation, however poor.<br>Excluding the pollutants from the increase in diesel<br>locomotive movements therefore is symptomatic of the<br>deficiencies in an assessment of suitability of the site.<br>Much of the data used is of dubious relevance to the<br>Enfield site, which has acknowledged unique<br>meteorological condition, (eg data from Lidcombe,<br>Bankstown Airport, Earlwood) Additionally no attempt has<br>been made to collect site specific data although there has<br>been ample time to do so.<br>Several schools are located very close to the site or along<br>the rail line leading to the site eg, Strathfield South High,<br>Belmore Primary, Malek Fayed School. Scant analysis has<br>been made of potential impacts on the health of students!<br>Should this proposal proceed, A baseline at all suspect<br>locations ought to be established before<br>construction/operational phase and monitored thereafter.<br>Strathfield and other neighbouring Councils would be the<br>logical source of this advice.<br>Permanent monitoring of additional sites for air quality —<br>South Strathfield High, Melville Ave, Newton Road west,<br>Pemberton Rd, Arthur Street at Centenary Drive, rear of<br>properties Cave Road, Liverpool Rd near the canal,<br>Wentworth Rd at Drone Street, Blanche St at<br>Cosgrove ,Dean St abutting canal. | Air quality impacts are considered in Chapter 12,<br>section 12.10 provides a cumulative assessment. The<br>air quality study was undertaken in accordance with<br>Department of Environment and Conservation (DEC)<br>guidelines<br>Rail issues are addressed in Chapter 8. Traffic impacts<br>are assessed in Chapter 7, in which modelled future<br>traffic volumes around the site are provided. Air quality<br>impacts are addressed in Chapter 12. This identifies<br>only marginal increases in PM10 and NO2<br>concentrations from off site vehicle traffic, these are<br>below NSW EPA criteria.<br>Potential health impacts from the proposed ILC<br>development are further addressed in Chapter 17. The<br>changes to air quality from the site operation and truck<br>movements will all fall within designated air quality<br>criteria, so there will be no threat to public health from<br>the proposed works.<br>The appropriate approach to the management of effects<br>from the rail freight line through is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor.<br>Construction and operation management plans are to<br>be implemented to monitor and control air quality issues<br>resulting from the ILC.<br>Air quality management measures including appropriate<br>monitoring requirements would be incorporated into the<br>Construction Dust Management Plan and the Operation<br>Environmental Management Plan. | 817         | Submission No 120 & 181 |
| Air Quality    | The Environmental Assessment claims that the proposed<br>ILC would result in reduction of carbon dioxide emissions<br>within the Sydney basin. However, the increased amount<br>of truck 7< traffic and resultant pollution in Strathfield<br>Municipality and adjacent areas will be substantially<br>increased.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The relative reduction in total road and rail emissions<br>due to the relative reduction in truck numbers was the<br>basis of the statement. This still applies.<br>Traffic impacts are assessed in Chapter 7, in which<br>modelled future traffic volumes around the site are<br>provided. Air quality impacts are addressed in Chapter<br>12. This identifies only marginal increases in PM10 and<br>NO2 concentrations from off site vehicle traffic, and<br>these are below NSW EPA criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 31          | Submission No 136       |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Stakeholder | Name                   |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|------------------------|
| Air Quality    | At no time has Sydney Ports addressed community<br>concerns about the increase in emissions and particulate<br>matter produced by diesel locomotives. We understand<br>that there are no emission controls on diesel locomotives<br>and that no studies have been done to establish their<br>contribution to air quality in the Enfield locality or within the<br>Sydney air-shed, or to determine their contribution to<br>greenhouse gas production.<br>In Queensland, the vast majority of rail freight lines are<br>electrified, thus reducing locomotive emissions, but of<br>course, adding to greenhouse gas through the use of coal<br>fired power. Has NSW considered using the idle electric<br>locomotives 'stabled' at Lithgow?<br>It appears that the NSW Government has very limited<br>concerns for the long-term health of Sydney residents.<br>Study after study, both local and international, has reported<br>the on-going health impacts of pollutants from road traffic<br>on the health and longevity of those exposed to heavy<br>traffic, especially from congested roads. The very young,<br>the elderly and unborn foetuses are particularly vulnerable. | Traffic generation during operation is addressed in<br>Chapter 7 and rail traffic in Chapter 8. The air quality<br>assessment provided in Chapter 12 identifies that the<br>incremental increase in emissions would not result in<br>exceedance of the NSW EPA air quality objectives. An<br>Operational Environmental Management Plan would<br>provide a program for ongoing management of traffic<br>and air quality.<br>Removal of a portion of traffic from the roads has the<br>potential to reduce traffic related impacts on a regional<br>basis, as such will influence traffic related carbon<br>dioxide emissions.<br>Potential health impacts from the proposed ILC<br>development are further addressed in Chapter 17. | 447         | Submission No 315, 158 |
| Air Quality    | The artist's impression of the renovated tarpaulin factory<br>shows the mountains absent. Don't move those mountains!<br>These mountains were made in the 1992 to hold toxic and<br>carcinogenic substances from previous use as a<br>marshalling area. Moving those mountains will cause the<br>dust to fly around and settle in nearby residential areas.<br>More of the health effects of moving such dust need to be<br>done.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | The stockpiles have been subject to contamination<br>testing, the results are detailed in Chapter 9.<br>Contaminated soils will be removed from site or treated<br>on site and reused. Dust from works areas will be<br>controlled through the Dust Management Plan to<br>prevent the release of airborne particulates from these<br>mounds during construction.<br>Potential health impacts from the proposed ILC<br>development are further addressed in Chapter 17                                                                                                                                                                                                                                                              | 814         | Submission No 135      |
| Air Quality    | However, our limited research has shown that, with a significant increase in both diesel locomotives and diesel trucks, there is bound to be an unacceptable rise in the levels of noise and air pollution for Southern Sydney. There is no mention in the FIAB report of the air pollution associated with old unregulated diesel locomotives and this is an issue of serious concern to NoPE. We accept that a modal shift to freight rail is in principle a sound concept, but in our view freight rail /noise and the air quality impacts of dirty diesel locomotives are very real and substantial issues that must be addressed and resolved before such a shift occurs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Rail issues are addressed within Chapter 8.<br>The appropriate approach to the management of effects<br>from the rail freight line through is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor.                                                                                                                                                                                                                                                                                                      | 30          | Submission No 93       |

|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|-------------------|
| Air Quality    | Noise pollution, air pollution and traffic congestion will<br>increase and a whole of Sydney will be affected, including<br>suburbs in the Bankstown Local Government Area where I<br>live.                                              | Removal of a portion of traffic from the roads has the<br>potential to reduce traffic related impacts on a regional<br>basis. Noise, air quality and traffic are addressed in<br>Chapters 11, 12 and 7 of the EA report.                                                                                                                 | 811               | Submission No 125 |
| Air Quality    | We also have grave concerns about Air Pollution<br>(carcinogenic diesel emissions in particular) knowing that<br>the local incidence of cancer in a major Health Study is<br>some 25% to 30% above the average for the Sydney<br>Region. | The air quality assessment provided in Chapter 12<br>identifies that the incremental increase in emissions<br>would not result in exceedance of the NSW EPA air<br>quality objectives. An Operational Environmental<br>Management Plan would provide a program for ongoing<br>management of traffic and air quality.                     | 834               | Submission No 319 |
|                |                                                                                                                                                                                                                                          | Potential health impacts from the proposed ILC development are further addressed in Chapter 17.                                                                                                                                                                                                                                          |                   |                   |
| Air Quality    | Since the Enfield and surrounding areas are predominantly<br>residential, this will result in a number of detrimental effects<br>including, noise pollution, air pollution and a risk to local<br>pedestrians.                           | The potential for increase in dust during construction<br>and operation is addressed in Chapter 12. This<br>assessment shows that the expected PM10 (24 hour<br>average and all hours average) are within NSW EPA air<br>quality criteria.                                                                                               | 809               | Submission No 123 |
|                |                                                                                                                                                                                                                                          | A part of the air quality assessment modelling of air<br>quality impacts was undertaken at a number of locations<br>around the site. A Dust Management Plan would be<br>implemented during construction. As a result no<br>significant air quality impacts are expected from dust<br>deposition, with dust mitigation measures in place. |                   |                   |
| Air Quality    | You can't even imagine how much noise, dust, vibration,<br>pollution will be experienced by us. Even before the actual<br>functioning starts, there will be so much construction traffic<br>that our life would be made hell.            | The potential for increase in dust during construction<br>and operation is addressed in Chapter 12. This<br>assessment shows that the expected PM10 (24 hour<br>average and all hours average) are within NSW EPA air<br>quality criteria.                                                                                               | 542               | Submission No 122 |
|                | would be generated by this. Its simply not a viable idea.                                                                                                                                                                                | A part of the air quality assessment modelling of air<br>quality impacts was undertaken at a number of locations<br>around the site. A Dust Management Plan would be<br>implemented during construction. As a result no<br>significant air quality impacts are expected from dust<br>deposition, with dust mitigation measures in place  |                   |                   |
| Air Quality    | With 24/7 use residents will be greatly affected by a huge increase in air pollution and fumes from trucks                                                                                                                               | Traffic impacts are assessed in Chapter 7, in which<br>modelled future traffic volumes around the site are<br>provided. Air quality impacts are addressed in Chapter<br>12. This identifies only marginal increases in PM10 and<br>NO2 concentrations from off site vehicle traffic, these<br>are below NSW EPA criteria.                | 798               | Submission No 174 |
|                |                                                                                                                                                                                                                                          | Construction and operation management plans are to be implemented to monitor and manage potential air quality impacts.                                                                                                                                                                                                                   |                   |                   |
|                |                                                                                                                                                                                                                                          | Potential health impacts from the proposed ILC                                                                                                                                                                                                                                                                                           |                   |                   |

| Air Quality    | Sydney Ports proposal would have severe impact on the<br>health of the residents as well as traffic flow within 10km<br>radius of the site causing traffic jam, noise, air and lighting<br>pollution for nearby residents                                                                                                                                                                                                                                                                                                                                                                        | Traffic impacts are assessed in Chapter 7, in which<br>modelled future traffic volumes around the site are<br>provided.<br>Potential health impacts from the proposed ILC<br>development are further addressed in Chapter 17.                                                                                                                                                                                                                                                                                                                                                                                                                              | 794         | Submission No 117         |
| Air Quality    | A lot more people not living in the immediate vicinity of the railway or the freight yard terminal will be affected by the diesel fumes of the train engines and by the diesel fumes of the trucks used to transport goods from the ILC to other parts of the metropolitan area.                                                                                                                                                                                                                                                                                                                 | Traffic impacts are assessed in Chapter 7, in which<br>modelled future traffic volumes around the site are<br>provided.<br>Rail issues are discussed in Chapter 8. The appropriate<br>approach to the management of effects from the rail<br>freight line through is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor.<br>Potential health impacts from the proposed ILC<br>development are further addressed in Chapter 17. | 793         | Submission No 147         |
| Air Quality    | I may as well take up smoking because the increased<br>petrol and diesel fumes will get to me anyway, not to<br>mention what it will do to children's lungs. There is already<br>a documented high incidence of cancer related illnesses in<br>this area.                                                                                                                                                                                                                                                                                                                                        | Air emissions from construction and site operation will<br>be able to meet DEC criteria, and there should be no<br>effect on public health as a result of the project. Potential<br>health impacts from the proposed ILC development are<br>further addressed in Chapter 17.                                                                                                                                                                                                                                                                                                                                                                               | 87          | Submission No 102         |
| Air Quality    | There was no study of the amount of particulates<br>generated by the constant starting and stopping and idling<br>of small trucks should the logistics centre be build using the<br>current infrastructure. If the study was based on the current<br>road infrastructure - it is under utilizing the full capacity of<br>the land.                                                                                                                                                                                                                                                               | Traffic impacts are assessed in Chapter 7, in which<br>modelled future traffic volumes around the site are<br>provided. Air quality impacts are addressed in Chapter<br>12. This identifies only marginal increases in PM10 and<br>NO2 concentrations from off site vehicle traffic, these<br>are below NSW EPA criteria.                                                                                                                                                                                                                                                                                                                                  | 814         | Submission No 135         |
| Air Quality    | The air quality assessment clearly shows higher increases<br>of SO2 and NO in the vicinity of South Strathfield directly as<br>a result of this development. There is a risk of emissions air<br>quality impacts from emissions of hazardous substances<br>within contaminated soils earmarked for remediation earth<br>works. The contaminants are: heavy metals, hydrocarbons<br>and asbestos.<br>The lower lying canal and the topography of the St Anne's<br>precinct will mean that this area will become the repository<br>of fallout from the operation of the intermodal facility. It is | Air emissions from construction and site operation will<br>be able to meet DEC criteria, and there should be no<br>effect on public health as a result of the project. Potential<br>health impacts from the proposed ILC development are<br>further addressed in Chapter 17.                                                                                                                                                                                                                                                                                                                                                                               | 856         | DoP submission number 329 |

| Alternative Sites | NoPE has prepared various submissions arguing strongly<br>that the Enfield site was not appropriate for<br>an intermodal terminal/logistics centre                                                                                                                                                                                                                                         | Alternative sites are considered in Chapter 3 of the EA<br>Report. The site at Enfield is considered to be the most<br>suitable site to service the inner and middle western<br>areas of the Sydney market, given the area available, its<br>location in an industrial area and its direct connection to<br>Port Botany by a dedicated rail freight line.                                                                                                                                                                                                                                                                                          | 30          | Submission No 93      |
| Alternative Sites | If designated containers could be off railed at several<br>different transfer stations e.g. Villawood,Yennora,Ingleburn<br>and Minto the traffic blockage around Enfield would be<br>minimised. Roberts Rd and Cosgrove Rd which has always<br>been a traffic hazard, would then be less impacted.                                                                                         | Chapter 3 provided a detailed justification of the need for<br>an intermodal at Enfield. The site meets the<br>requirements of being within the catchment area it<br>serves, close to rail and close to main road network. The<br>traffic effects at Enfield due to the ILC will be very minor<br>in the context of the existing and future traffic conditions<br>without the ILC.                                                                                                                                                                                                                                                                 | 597         | Submission No 21      |
| Alternative Sites | Surely it would be more economical and environmentally<br>sound to place such a logistics centre in an Industrial area<br>close to the SPC itself and then have traffic diffuse itself<br>throughout the many areas of Sydney. In this way the area<br>in Enfield might be left for more appropriate usage, as for<br>example, that suggested by the local council, an<br>employment zone. | This is what currently happens. The purpose of the ILC<br>is to reduce the growth in the number of these truck<br>movements diffusing through the streets of Sydney. The<br>ILC at Enfield is needed to provide a base to service the<br>freight container destinations in the inner and middle<br>western Sydney.                                                                                                                                                                                                                                                                                                                                 | 626         | Submission No 36      |
| Alternative Sites | Build the ILC somewhere else where it won't affect the health and quality of life of people.                                                                                                                                                                                                                                                                                               | Alternative sites are considered in Chapter 3 of the EA<br>Report. The site at Enfield is considered to be the most<br>suitable site to service the inner and middle western<br>areas of the Sydney market, given the area available, its<br>location in an industrial area and its direct connection to<br>Port Botany by a dedicated rail freight line.                                                                                                                                                                                                                                                                                          | 630         | Submission No 39 & 98 |
| Alternative Sites | To reduce the environmental impact, the NoPE group have<br>suggested alternatives to the ILC such as updating Port<br>Botany and increasing freight trade at existing ports in Port<br>Kembla and Newcastle. This appears to make a lot more<br>sense than to increase freight transport in an area that is<br>unable to sustain it.                                                       | Alternatives have been considered in Chapter 3 of the<br>EA Report. The site at Enfield is considered to be the<br>most suitable site to service the inner and middle<br>western areas of the Sydney market, given the area<br>available, its location in an industrial area and its direct<br>connection to Port Botany by a dedicated rail freight line.<br>If container trade were to expand in Newcastle or Port<br>Kembla to accommodate the growth in container trade<br>within Sydney, containers would still need to travel by<br>train or truck into the inner and middle western areas of<br>Sydney to serve this market catchment area. | 631         | Submission No 42      |
| Alternative Sites | I'm baffled as to why would anyone want to build such a<br>large noise producing facility in the middle of suburbia.<br>Why can't containers be dispatched directly onto trucks<br>from Port Botany which is currently an industrial area.                                                                                                                                                 | Alternatives have been considered in Chapter 3 of the EA Report. This is what currently happens. The purpose of the ILC is reduce the growth in the number of these truck movements diffusing through the streets of Sydney. The ILC at Enfield is needed to provide a base to service the freight container destinations in the inner and middle western Sydney.                                                                                                                                                                                                                                                                                  | 638         | Submission No 61      |
| Alternative Sites | There are viable alternatives to the and from the Enfield site                                                                                                                                                                                                                                                                                                                             | Alternatives have been considered in Chapter 3 of the<br>EA Report. |                   |                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | ID          |                               |
| Alternative Sites | I understand that Wollongong and Newcastle have their<br>arms wide open for the development to occur there. There<br>are viable alternatives to and for the Enfield Site. I urge you<br>to act and alter the proposal for the Enfield site that has the<br>potential to destroy the quality of life of the residents living<br>in Inner West Sydney. | Alternatives have been considered in Chapter 3 of the<br>EA Report. The site at Enfield is considered to be the<br>most suitable site to service the inner and middle<br>western areas of the Sydney market, given the area<br>available, its location in an industrial area and its direct<br>connection to Port Botany by a dedicated rail freight line.<br>If container trade were to expand in Newcastle or Port<br>Kembla to accommodate the growth in container trade<br>within Sydney, containers would still need to travel by<br>train or truck into the inner and middle western areas of<br>Sydney to serve this market catchment area. | 681         | Submission No 94              |
| Alternative Sites | Sydney Ports Corporation reports that the trucks will serve<br>the area west of Enfield. In this case the transfer station<br>could be located further west.<br>The Port Enfield proposal results from NSW plans for the<br>expansion of Port Botany. This expansion will add<br>considerably to train and truck movements.                          | Alternatives have been considered in Chapter 3 of the<br>EA Report.<br>The site at Enfield is considered to be the most suitable<br>site to service the inner and middle western areas of the<br>Sydney market, given the area available, its location in<br>an industrial area and its direct connection to Port<br>Botany by a dedicated rail freight line.                                                                                                                                                                                                                                                                                      | 686         | Submission No 73              |
| Alternative Sites | There are viable alternatives to and for the Enfield site.                                                                                                                                                                                                                                                                                           | Alternatives have been considered in Chapter 3 of the<br>EA Report. The site at Enfield is considered to be the<br>most suitable site to service the inner and middle<br>western areas of the Sydney market, given the area<br>available, its location in an industrial area and its direct<br>connection to Port Botany by a dedicated rail freight line.                                                                                                                                                                                                                                                                                         | 713         | Submission No 138,40, 143,119 |
| Alternative Sites | The proposed site may be ideal but the whole scheme is<br>too close to the metropolitan area.<br>It is my opinion and most other folks too that it would be put<br>to perfection in further out areas. The train line can be used<br>as is less expensive than all the uncalled for problems in<br>using Project 05 0147                             | Alternatives have been considered in Chapter 3 of the<br>EA Report. The site at Enfield is considered to be the<br>most suitable site to service the inner and middle<br>western areas of the Sydney market, given the area<br>available, its location in an industrial area and its direct<br>connection to Port Botany by a dedicated rail freight line.<br>Other sites further west and south west may also be<br>developed in the future to service those catchment<br>areas as indicated in the Metropolitan Strategy.                                                                                                                        | 586         | Submission No4                |
| Alternative Sites | We recognise that the proposed Enfield Intermodal<br>Logistics Centre is but one part of a wider plan to<br>create an intermodal terminal network However we do not<br>agree that Enfield is a suitable site for the scale of<br>development that is proposed here.                                                                                  | Alternatives have been considered in Chapter 3 of the<br>EA Report. The site at Enfield is considered to be the<br>most suitable site to service the inner and middle<br>western areas of the Sydney market, given the area<br>available, its location in an industrial area and its direct<br>connection to Port Botany by a dedicated rail freight line.<br>The environmental assessment has demonstrated that<br>impacts on the local community will be able to be<br>managed.                                                                                                                                                                  | 30          | Submission No 93              |
| Alternative Sites | There appears to be very little sense in locating an<br>Intermodal Logistics Centre in Enfield some 18km from<br>Port Botany, The economic viability of double handling and<br>transporting the containers for such a short distance is<br>questionable. It would appear to make more sense to                                                       | Alternatives have been considered in Chapter 3 of the<br>EA Report. Details regarding proposed operation of the<br>ILC are provided in Chapter 4.<br>The site at Enfield is considered to be the most suitable<br>site to service the inner and middle western areas of the                                                                                                                                                                                                                                                                                                                                                                        | 838         | Submission No 173,150         |

| Alternative Sites | It would appear to make more sense to establish a facility<br>further to the west of Sydney where there is better access<br>to the Sydney Orbital road network, rather than basing<br>arguments for the project on "geographic distance from<br>Botany and markets in isolation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Alternatives have been considered in Chapter 3 of the<br>EA Report.<br>The site at Enfield is considered to be the most suitable<br>site to service the inner and middle western areas of the<br>Sydney market, given the area available, its location in<br>an industrial area and its direct connection to Port<br>Botany by a dedicated rail freight line.<br>The environmental assessment has demonstrated that<br>impacts on the local community will be able to be<br>managed.<br>Other sites further west and south west may also be<br>developed in the future to service those catchment<br>areas as indicated in the Metropolitan Strategy.                                                                            | 801         | Submission No 149,183 |
| Alternative Sites | If you want a larger one-off benefit to the state, it's to<br>privatise the land into smaller blocks and build factories<br>and light industrial units. This will be of greater benefit not<br>only to the state because of the one-off selling of the land,<br>but also generate a recurrent benefit to the local economy,<br>the state's economy and national economy. Privatising and<br>subdividing the land into factories and light industrial areas,<br>goods and services will add to Received the national<br>balance of payments - this is because more jobs will be<br>created than the current proposed facility, goods and<br>services will be produced adding to the national accounts<br>will be produced. On a national economic point of view, the<br>proposed facility given the lack of infrastructure will only<br>encourage the importing of goods which will only decrease<br>the balance of payments.<br>The Greater West Economic Development Board chairman<br>(ABC Asia Pacific, April 2004) was crying out for an<br>intermodal facility such as the one in Enfield. He said there<br>was plenty of land and plenty of infrastructure. Something<br>that is not available for the Enfield site. He also said that the<br>area was now the centre of Sydney. Given access to the<br>M7 (2005) and M4, this would be more sense to use the<br>larger infrastructure facility. More simulation studies need<br>to be done in this matter. | Justification for use of the Enfield site is provided in<br>Chapter 22.<br>Alternatives have been considered in Chapter 3 of the<br>EA Report.<br>The site at Enfield is considered to be the most suitable<br>site to service the inner and middle western areas of the<br>Sydney market, given the area available, its location in<br>an industrial area and its direct connection to Port<br>Botany by a dedicated rail freight line.<br>The environmental assessment has demonstrated that<br>impacts on the local community will be able to be<br>managed.<br>Other sites further west and south west may also be<br>developed in the future to service those catchment<br>areas as indicated in the Metropolitan Strategy. | 814         | Submission No 135     |
| Alternative Sites | I can't see why the Port Botany Depot can't be expanded so<br>that goods going to various areas go there without going to<br>Enfield                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Alternatives have been considered in Chapter 3 of the<br>EA Report.<br>The site at Enfield is considered to be the most suitable<br>site to service the inner and middle western areas of the<br>Sydney market, given the area available, its location in<br>an industrial area and its direct connection to Port<br>Botany by a dedicated rail freight line.<br>The environmental assessment has demonstrated that<br>impacts on the local community will be able to be<br>managed. Expanding Port Botany does not in itself<br>achieve the State Government's objective of increasing<br>the use of rail to distribute freight across NSW/Sydney.<br>Other sites further west and south west may also be                       | 831         | Submission No 316     |

| Alternative Sites | This is not just a case of 'not in my backyard' but a case of<br>'not in anyone's backyard' and there are many alternatives<br>to locating intermodals and like developments within<br>suburbs which are primarily residential.<br>Developments such as this intermodal must be located in<br>Sydney's hinterland areas and workers will follow to live in<br>nearby unpolluted zones. This is what happened in<br>Newcastle and Wollongong.<br>A wiser alternative would be to locate the intermodal on the<br>outskirts of Sydney where there is still a great deal of | Alternatives have been considered in Chapter 3 of the<br>EA Report.<br>The site at Enfield is considered to be the most suitable<br>site to service the inner and middle western areas of the<br>Sydney market, given the area available, its location in<br>an industrial area and its direct connection to Port<br>Botany by a dedicated rail freight line.<br>The environmental assessment has demonstrated that<br>impacts on the local community will be able to be<br>managed.<br>Other sites further west and south west may also be<br>developed in the future to service those catchment                                              | 736         | Submission No 129,130 |
|                   | outskirts of Sydney where there is still a great deal of<br>vacant land and where government could compulsorily buy<br>back residences which might exist in the path of the<br>development.<br>It should therefore be sited in the first place in a location<br>where a buffer zone can be built and permanently<br>maintained around it to shield commercial and residential<br>zones which may eventually encroach upon it as Sydney<br>expands.                                                                                                                       | developed in the future to service those catchment<br>areas as indicated in the Metropolitan Strategy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |             |                       |
|                   | A major advantage of siting intermodals at both Newcastle<br>and Wollongong is that if something goes wrong at one<br>intermodal/port ships, trucks and trains can be diverted to<br>the one in working order. This would circumvent the<br>possibility of total stoppage of freight transportation.                                                                                                                                                                                                                                                                     | If container trade were to expand in Newcastle or Port<br>Kembla to accommodate the growth in container trade<br>within Sydney, containers would still need to travel by<br>train or truck into the inner and middle western areas of<br>Sydney to serve this market catchment area.                                                                                                                                                                                                                                                                                                                                                           |             |                       |
| Alternative sites | Rather than spending billions of dollars on freight lines in<br>Sydney and risking the health of residents through<br>increased air pollution, the State Government should<br>consider investing in freight lines in regional areas of NSW.<br>Instead a number of farmers have been inconvenienced.                                                                                                                                                                                                                                                                     | Government Policy for freight transport is addressed in Chapter 3.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 811         | Submission No 125     |
| Alternative sites | To reduce the environmental impact, The No Port Enfield<br>Community Action Group (NoPE) have suggested<br>alternatives to the ILC, such as, updating Port Botany and<br>increasing freight trade at existing ports in Port Kembla and<br>Newcastle. This appears to make a lot more sense than to<br>increase freight transport in an area that is unable to<br>sustain it. The environmental and social impacts would be<br>sizeable, should the ILC construction go ahead, therefore,<br>this proposal clearly warrants reconsideration.                              | Consideration of alternative sites is provided in Chapter<br>3. The site at Enfield is considered to be the most<br>suitable site to service the inner and middle western<br>areas of the Sydney market, given the area available, its<br>location in an industrial area and its direct connection to<br>Port Botany by a dedicated rail freight line.<br>The environmental assessment has demonstrated that<br>impacts on the local community will be able to be<br>managed.<br>Other sites further west and south west may also be<br>developed in the future to service those catchment<br>areas as indicated in the Metropolitan Strategy. | 786         | Submission No 106     |

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | If container trade were to expand in Newcastle or Port<br>Kembla to accommodate the growth in container trade<br>within Sydney, containers would still need to travel by<br>train or truck into the inner and middle western areas of<br>Sydney to serve this market catchment area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                   |                           |
| Alternative sites | The irony is that Port Enfield is all about containers- by their<br>nature their goods and contents are shielded from all<br>weathers and any odours or dust or bugs from exotic<br>climes are encased. Yet, by placing this facility in the heart<br>of Chullora and Strathfield instead of a greenfield site on<br>the perimeter of the city close to a major inter regional route<br>such as the new M7, the NSW Government is addressing<br>precisely every issue other than containment of its adverse<br>consequences | Government policy for freight transport is addressed in<br>EA Report Chapter3. The EA has demonstrated that the<br>impacts of the proposed development on the community<br>will be able to be managed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 856               | DoP submission number 329 |
| Alternative sites | Alternative sites in areas such as Eastern Creek, close to<br>the M7 and in an area where there is little private residential<br>development and a great deal of commercial activity, would<br>make more sense that the Enfield proposal. Also areas<br>outside of the Sydney basin must be considered, those<br>such as Newcastle or Wollongong where unemployment is<br>higher and those communities would get the much needed<br>economic boost that they currently lack                                                 | Alternatives have been considered in Chapter 3 of the<br>EA Report.<br>The site at Enfield is considered to be the most suitable<br>site to service the inner and middle western areas of the<br>Sydney market, given the area available, its location in<br>an industrial area and its direct connection to Port<br>Botany by a dedicated rail freight line.<br>The environmental assessment has demonstrated that<br>impacts on the local community will be able to be<br>managed.<br>Other sites further west and south west may also be<br>developed in the future to service those catchment<br>areas as indicated in the Metropolitan Strategy.<br>If container trade were to expand in Newcastle or Port<br>Kembla to accommodate the growth in container trade<br>within Sydney, containers would still need to travel by<br>train or truck into the inner and middle western areas of<br>Sydney to serve this market catchment area. | 865               | DoP submission No 330     |

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | ID          |                          |
| amenity/quality of life | The proposed building of this monstrosity would greatly<br>affect the health and quality of life of people living in the<br>many suburbs that would be affected by it taking in both<br>Strathfield and Bankstown Council Municipalities.<br>Traffic noise and pollution (see in table) will have a<br>detrimental affect on the quality of life and health of the<br>affected residents living near the proposed terminal.<br>The general detrimental environmental affect this proposal<br>will have on the residential areas surrounding this<br>proposed development. | The potential impacts on community amenity were described in detail in Chapter 17 of the EA. The potential for amenity impacts on residents in close proximity to the ILC included noise, air pollution, hazard spills and a number of traffic and pedestrian issues and mitigation measures to address these were described.<br>Further consideration of impacts during construction and operation will be undertaken during detailed design and mitigation and management measures incorporated into the appropriate construction and operational management plans. Noise and air pollution are considered in chapters 11 and 12 of the EA Report SPC is committed to achieving noise and air quality goals during operation. Construction impacts can be managed to achieve a satisfactory level. Light spill was addressed in Chapter 16 and Appendix I of the EA and will be managed by the use of appropriate light fittings and levels. The increased traffic on the surrounding road network due to the proposal was discussed in Chapter 7 and Appendix B of the EA. It will be minimal .Traffic generation form the ILC would be controlled through a Local Area Traffic Management Plan. Road safety will be managed through this process, and the risk of accidents for pedestrians will not change. The ILC is designed for 300,000 TEU by virtue of the site constraints and proposed balanced use of the site from the rail freight line through the area is one that includes all relevant Government agencies, including DEC, RailCorp and ARTC. SPC will work with these other agencies and relevant Councils to consider ways of managing impacts associated with rail operations in the dedicated freight rail corridor. | 630         | DoP Submission no 39, 98 |
| amenity/quality of life | The plan is NOT environmentally friendly and once again<br>we are all being squeezed out of our rights for peace and<br>quiet and the right to lead a healthy life by those people<br>who want to make big bucks. We have had enough of it and<br>it is time to stop this inroad into our birthright. What about<br>our children and those that follow on                                                                                                                                                                                                                 | See above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 585         | DoP Submission no 3      |

| amenity/quality of life | It will hurt my health and other members of my family. It will disturb my sleep and my family from trucks and train.                                                                                                                                                                                     | See above                                                                                                                                                                                                                                                                                                                                                       | 618               | DoP Submission no 26     |
| amenity/quality of life | The pollution will affect our health.                                                                                                                                                                                                                                                                    | See above                                                                                                                                                                                                                                                                                                                                                       | 93                | DoP Submission no 25     |
| amenity/quality of life | We feel that our tranquility and quality of life will be compromised.                                                                                                                                                                                                                                    | See above                                                                                                                                                                                                                                                                                                                                                       | 599               | DoP Submission no 23     |
| amenity/quality of life | (Referring to air quality) There are many children in this area, also schools, people with asthma cancer and heart problems. It is causing stress at the noise levels now.                                                                                                                               | See above                                                                                                                                                                                                                                                                                                                                                       | 593               | DoP Submission no16      |
| amenity/quality of life | Concern about loss of open space.<br>We do not want our residential suburb to become a<br>commercial port. Imagine the increase in frequency of<br>goods train and hundreds of trucks on the local roads. We<br>do not want our children to grow and suffer in such a noisy<br>and polluted environment. | The proposed ILC is a low density development. Over 8 hectares of the 60 hectare site is green space, including a community and ecological area of 6 hectares.<br>See above                                                                                                                                                                                     | 588               | DoP Submission no 7      |
| amenity/quality of life | Flood lit site (this site can be seen from space with out light<br>what will it be like when fully operation; with hundreds of<br>flood lights beaming on to hard paving and steel rail track)<br>Night time operation- lack of sleep.                                                                   | The light spill impacts are considered in Chapter 16.<br>The proposed lighting would not be expected to change<br>the night landscape as the lights would be focused<br>downwards and would be part of a landscape already<br>containing a large number of light sources. Lighting on<br>site would be designed to meet AS4282 Control of<br>Obtrusive Effects. | 512               | DoP Submission no 45     |
|                         | Customs- how much checking will be taking place? Will this be the next Drug running area of Sydney                                                                                                                                                                                                       | Border protection is the responsibility of the Australian<br>Customs Service ('Customs'). It works closely with                                                                                                                                                                                                                                                 |                   |                          |

| Issue Category          | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Stakeholder<br>ID | Name                      |

|                         | What type of goods will be coming in and what measures<br>will be taken in case of emergency. Explosives, Drugs. My<br>life is in danger.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | other government and international agencies, in<br>particular the Australian Quarantine and Inspection<br>Service and the Department of Defence, to detect<br>unlawful movement of goods across the border.<br>Protecting the Australian community through<br>interception of illegal drugs and firearms is a high<br>priority and sophisticated techniques<br>are used to target high-risk aircraft, vessels, cargo and<br>postal items.<br>This includes intelligence analysis, computer based<br>analysis, detector dogs and other technologies.<br>Customs will not treat containers transferred<br>through the ILC any differently to other containers<br>imported into Australia." |                   |                           |
| amenity/quality of life | The practicalities of this totally absurd idea of making a container port in the middle of homes can't even be thought about by people sitting in the offices. I live next to the Strathfield South High school, and in your report, no one has given any thoughts for the people living in Cave Road along Hume Highway, all they have thought about is the residents at the other side of Cosgrove Road.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The potential impact of the proposed ILC on health and<br>wellbeing of local residents is reviewed in Chapter 17.<br>Noise is considered in detail in Chapter 11. There will<br>be no noise from the project evident at this location.                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 542               | DoP Submission no 122     |
| amenity/quality of life | Worr make their me easier.<br>With regards to the impacts on the communities bounding<br>the proposed site it is suggested that there is nothing in the<br>Environmental Assessment that would persuade me that<br>the amenity and well being will not be severely<br>compromised by this proposal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | The potential impact of the proposed ILC on health,<br>amenity and wellbeing of local residents is reviewed in<br>Chapter 17.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 817               | DoP Submission no 120,181 |
|                         | To suggest that a token environmental area, a few sound<br>barriers and the carrot of jobs growth in what is essentially<br>a residential area will somehow compensate for this loss of<br>amenity is staggering.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Opinion noted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                   |                           |
|                         | The EA contends that the ILC will be modelled on typical intermodal activity as at the Port of Melbourne (p46FTWP)—East/West Swanson, Dynon and Kewdale Terminals, Altona, etc. These are all in or near seaports and in participation and activity of the search of the sea | The ILC activity profile was drawn from these areas. It is not intended that any parallels be drawn, other than that.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                   |                           |
|                         | are in no respects similar to Enfield. 24/7 hours of operation<br>are totally unsuitable for an industrial site adjacent to<br>surrounding residential areas, and move well beyond<br>accepted community standards, expectations and normal<br>planning parameters which have been continually upheld<br>by the Land and Environment Court.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | the site and of truck movement and will be able to<br>manage noise impacts at that time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                   |                           |
|                         | Nightime heavy vehicle movements are of concern. Even<br>taking the EA figures which are contestable residents could<br>expect between 50 and 70 truck movements between<br>10pm and 6pm, that is between 6.25 truck movements and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Truck movements on Roberts Rd, at night, as a result of<br>the development will be minor in the context of the<br>existing and future (without the ILC) noise levels on<br>those roads. Road traffic noise is addressed in Chapter                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                   |                           |

|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|-----------------------|
|                         | 8.75 truck movements per hour, equivalent to one every<br>9.6 minutes or one every 6.85 minutes. Considering the<br>noise that deceleration and use of airbrakes currently make<br>at night especially when travelling on the Roberts Rd<br>overpass, this is unacceptable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 12 of the EA                                                                                                                                     |                   |                       |
|                         | It is contended that operating hours should be restricted to 5am to 1am the following morning with no deliveries inward/outwards during the period lam -5am.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | The ILC would operate 24 hours 7 days a week.                                                                                                    |                   |                       |
|                         | The EA suggests that the EILC should operate using best practice. Should that be the case it is suggested that this ought also to be applied to design of the industrial buildings and storage areas. From a description of the visual character of the proposal (vl p16-3) empty containers are to be stacked 6 high. This is too high at approx 16m as illustrated in nearby Gould Street. This should be conditioned to max 5 high Industrial buildings are planned to be 12m high. Consideration should be given to ensuring that both mounding and additional landscaping and/or painted treatments minimize this bulk. Although not mentioned in the EA, but verifiable by observation the site can clearly be seen from the ridge to the north at Ada Street. This vista needs to be considered. | Visual impacts including design of buildings,<br>landscaping and screening vegetation would be<br>considered during detailed design.             |                   |                       |
|                         | Hours of operation hours should be no more than 5am"<br>1am the following day significantly more than Sydney<br>Airport curfew and than any industrial use adjacent to<br>Residential areas. No deliveries to and from the site should<br>be permitted after 1am and before 5am.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The ILC would operate 24 hours 7 days a week.                                                                                                    |                   |                       |
| amenity/quality of life | The proposed 60 hectare facility will operate 7 days a week, 24 hours a day. As a local resident and a shift worker, I believe that the impacts of this facility will be detrimental on all local residents. Enfield is bounded by the residential suburbs of Strathfield, South Strathfield, Belmore, Lakemba, Belfield, Belmore Greenacre and Chullora.                                                                                                                                                                                                                                                                                                                                                                                                                                               | The potential impact of the proposed ILC on health,<br>amenity and wellbeing of local residents is reviewed in<br>Chapter 17. See details above. | 813               | DoP Submission no 176 |
| amenity/quality of life | I urge the State Government to reconsider this<br>infrastructure development proposal. I do not want an<br>Inter-modal Logistics Centre in Enfield or the resulting<br>damage to the environment and increase in pollution, traffic<br>congestion and the consequent effect on the health of<br>residents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Opinion noted<br>The potential impact of the proposed ILC on health and<br>wellbeing of local residents is reviewed in Chapter 17.               | 811               | DoP Submission no 125 |
| amenity/quality of life | The development could cause many hazardous implications such as: health issues stress amongst residents and other medical problems. This development, if approved would heavily impact on the surrounding residential areas and its communities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The potential impact of the proposed ILC on health,<br>amenity and wellbeing of local residents is reviewed in<br>Chapter 17.                    | 810               | DoP Submission no 168 |

|                         | If the Intermodal were approved, Council would prefer to<br>see restricted hours of operation as detailed in Council's<br>submission                                                                                                                                                                                                                                        | a Local Area Traffic Management Plan. Road safety will<br>be managed through this process, and the risk of<br>accidents for pedestrians will not change.<br>The ILC is designed for 300,000 TEU by virtue of the<br>site constraints and proposed balanced use of the site<br>between intermodal, warehousing and empty container<br>operations.<br>The appropriate approach to the management of effects<br>from the rail freight line through the area is one that<br>includes all relevant Government agencies, including<br>DEC, RailCorp and ARTC. SPC will work with these<br>other agencies and relevant Councils to consider ways<br>of managing impacts associated with rail operations in<br>the dedicated freight rail corridor.<br>The ILC would operate 24 hours 7 days a week. |                   |                       |
| amenity/quality of life | We are already suffering due to lack of sleep as it is. We do not need even more noisy trains.                                                                                                                                                                                                                                                                              | The potential impact of the proposed ILC on health and<br>wellbeing of local residents is reviewed in EA Report<br>Chapter 17.<br>Mitigation measures to be implemented to control noise<br>are described in EA ReportChapter 11.<br>The appropriate approach to the management of effects<br>from the rail freight line through the area is one that<br>includes all relevant Government agencies, including<br>DEC, RailCorp and ARTC. SPC will work with these<br>other agencies and relevant Councils to consider ways<br>of managing impacts associated with rail operations in<br>the dedicated freight rail corridor.                                                                                                                                                                 | 806               | DoP Submission no 152 |
| amenity/quality of life | The safety and health problems including stress is not worth this uneconomic venture.                                                                                                                                                                                                                                                                                       | The potential impact of the proposed ILC on health and wellbeing of local residents is reviewed in EA Report Chapter 17.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 798               | DoP Submission no 174 |
| amenity/quality of life | Any use of the Enfield Marshalling Yards as a freight<br>terminal should not be approved. The site is completely<br>unsuitable for such facility given its proximity residential<br>areas and the adverse community and environmental<br>impacts the redevelopment would create. It would have<br>disastrous impacts on our community, our environment and<br>on our roads. | The potential impact of the proposed ILC on health,<br>amenity and wellbeing of local residents is reviewed in<br>Chapter 17. Traffic is addressed in Chapter 7.<br>Social impacts are discussed above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 794               | DoP Submission no 117 |
|                         | There are viable alternatives to and from the Enfield site. I<br>urge you to act and end the proposal for the Enfield site that<br>has the potential to destroy the quality of life of residents<br>living in Inner West Sydney.                                                                                                                                            | Alternative sites are considered in Chapter 3 of the EA<br>Report. The site at Enfield is considered to be the most<br>suitable site to service the inner and middle western<br>areas of the Sydney market, given the site area<br>available, its location in an industrial area and its direct<br>connection to Port Botany by a dedicated rail freight line<br>and to major arterial roads.                                                                                                                                                                                                                                                                                                                                                                                                |                   |                       |

| amenity/quality of life | The people who will be most affected by the movement of<br>those many smaller trucks will be most affected by the<br>movement of those many smaller trucks ferrying the goods<br>delivered to the ILC by train are those living on Roberts Rd<br>Greenacre and streets that intersect with it.                                                                                                                                            | The potential impact of the proposed ILC on health,<br>amenity and wellbeing of local residents is reviewed in<br>Chapter 17. Traffic is addressed in Chapter 7.                                                                                                                                                                                                                        | 793               | DoP Submission no 147 |
|                         | There will be further pressure and stress for residents from<br>noise of freight trains arriving, being unloaded and moving<br>off again.                                                                                                                                                                                                                                                                                                 | Mitigation measures to be implemented to control site<br>operational noise are described in Chapter 11 and in<br>the Preferred Proposal Report (PPR).                                                                                                                                                                                                                                   |                   |                       |
| amenity/quality of life | Our children need to study and we need to get a good<br>night's sleep to be able to function in our daily lives and<br>jobs. When do the residents of Belfield get some peace and<br>quiet?                                                                                                                                                                                                                                               | The potential impact of the proposed ILC on health, amenity and wellbeing of local residents is reviewed in Chapter 17.                                                                                                                                                                                                                                                                 | 524               | DoP Submission no 110 |
|                         | If this proposal goes ahead, rail traffic will undoubtedly<br>increase significantly. There are two schools - Belmore<br>North Primary and Belmore North Boys High - also<br>affected by the noise from the freight trains and any further<br>increase in rail traffic would be unacceptable.                                                                                                                                             | The appropriate approach to the management of effects<br>from the rail freight line through the area is one that<br>includes all relevant Government agencies, including<br>DEC, RailCorp and ARTC. SPC will work with these<br>other agencies and relevant Councils to consider ways<br>of managing impacts associated with rail operations in<br>the dedicated freight rail corridor. |                   |                       |
|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                           | Mitigation measures to be implemented to control site<br>operational noise are described in Chapter 11 and in<br>the Preferred Proposal Report (PPR).                                                                                                                                                                                                                                   |                   |                       |
| amenity/quality of life | As a result, the increased noise pollution from large trucks will affect the sleeping patterns of local residents.                                                                                                                                                                                                                                                                                                                        | The impact of the ILC on amenity and wellbeing of local residents is considered in Chapter 17. Mitigation measures to be implemented to control site operational noise are described in Chapter 11 and in the Preferred Proposal Report (PPR).                                                                                                                                          | 786               | DoP Submission no 106 |
| amenity/quality of life | The FIAB documents fails absolutely to address the impacts of 24/7 operation of the terminals and their associated infrastructure on local communities.                                                                                                                                                                                                                                                                                   | Noted                                                                                                                                                                                                                                                                                                                                                                                   | 30                | DoP Submission no 93  |
| amenity/quality of life | This is compounded by the fact that the proposed<br>development will be active at all hours of the day. As a<br>result, the increased noise pollution from large trucks will<br>affect the sleeping patterns of local residents.<br>Furthermore, what is being done to compensate local<br>residents for increased noise and air pollution.                                                                                               | The impact of the ILC on amenity and wellbeing of local residents is considered in EA Report, Chapter 17. Mitigation measures to be implemented to control site operational noise are described in Chapter 11 and in the Preferred Proposal Report (PPR).                                                                                                                               | 809               | DoP Submission no 123 |
| amenity/quality of life | This proposal will not only reduce the monetary value of our<br>home but also our peaceful way of life.<br>It is hard to find a quality place like our suburb to live in so<br>close to the city. This proposal will significantly damage<br>one such place. The entire region will be adversely affected<br>My family and I urge you to stop this development that will<br>destroy the quality of life for residents living in the inner | The impact of the ILC on amenity and wellbeing of local residents is considered in Chapter 17. Mitigation measures to be implemented to control site operational noise are described in Chapter 11 and in the Preferred Proposal Report (PPR).                                                                                                                                          | 840               | DoP Submission no 322 |

| amenity/quality of life | In summary, more capital needs to be injected for<br>infrastructure surrounding the proposed facility. This<br>infrastructure will ensure (1) better utilize the land of the<br>proposed facility (2) improve the economics to transport<br>providers to and from the facility - (a)Less fuel used in<br>idling, starting/stopping of trucks - hence savings (b) Less<br>time idling for truck drivers and/or transport providers -<br>saving time = saving money © Less particulants are<br>generated by the idling starting/stopping of trucks — health<br>effects and also economic effects of residents/workers in<br>surrounding areas - better simulation studies need to be<br>done on these points (1), (2) and (3). It is better to use<br>semis and b-doubles rather than many trucks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | These issues are further discussed in Chapter 17 and<br>Chapter 22. Mitigation measures to manage noise and<br>air are outlined in chapters 11 &12 and discussed in the<br>Preferred Project Report (PPR)                                                                                                                                                                           | 814               | DoP Submission no 135     |
| amenity/quality of life | The study should have a steering panel comprising local residents and Councillors etc. This should be presented at community forums in affected community areas to inform and involve locals in the development process. If this is not done locals will once again believe that Planning and the NSW Govt are not concerned about local impacts on communities and the health and well being of local communities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | SPC intends to further consult with the community<br>during construction and operation of the ILC. This will be<br>through the formation of Community Liaison Groups as<br>well as other means.                                                                                                                                                                                     | 686               | DoP Submission no 73      |
| amenity/quality of life | By virtue of its 24/7 operation (one train every 7 minutes) the proposal will have a deleterious affect on my parents residential amenity. It is unacceptable that for approximately one third of the year in total , across all seasons this development's noise and fumes will directly impact my parents property and lifestyle with the consequence of reducing their residential amenity. There needs to be a more concerted effort at mitigation measures if such a heavy goods operation is proposed within 200 metres of an established residential area. The sole buffer- the community and ecological area- only serves residences to the south. However, given that noise dust, allergens, carcinogens and noxious gases are freely carried on the air subject to prevailing winds fro 24 hours of every day [Executive Summary p8 states" the majority of these (1160 truck movements) would be between 6am and 5 pm], it is little wonder that the proposed measures are nearly absent. It is hard to imagine what if anything will do the job. Whom is going to compensate my parents for the loss of amenity when it is too noisy to hear each other when outside when soot and fumes permeate clothes hung daily outside, when my father's incipient asthma is | Mitigation measures to manage noise and air are<br>outlined in chapters 11 &12 and discussed in the<br>Preferred Project Report (PPR).<br>The growth in train movements is not caused by the<br>development of the ILC. Train growth will occur along<br>the corridor irrespective of the project. All local ILC<br>impacts however, have been addressed as part of the<br>proposal | 856               | DoP submission number 329 |

|                         | exacerbated by being in his home of 49 years, when sleep<br>patterns are disturbed by intrusive noise and the daily trip<br>to the shops becomes a dice with container trucks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                   |                           |
| amenity/quality of life | If this proposed Intermodal Container Center were to go<br>ahead there would be a dramatic and adverse affect on the<br>local community, some of these are, but not limited to:<br>-increased health risks<br>- more trucks<br>more traffic congestion<br>-significant increase of road accidents<br>-increased vehicle damage to local residents' vehicles as a<br>result of road damage done by the extra truck movements<br>and the damage that they will do to the existing roads<br>- more trains<br>greater increase in air pollution<br>-more road noise pollution<br>-unnecessary increase in local council rates to cover<br>damage done by these trucks to council controlled roads | The potential impact of the proposed ILC on health,<br>amenity and wellbeing of local residents is reviewed in<br>Chapter 17.<br>The increased traffic on the surrounding road network<br>due to the proposal was discussed in Chapter 7 and<br>Appendix B of the EA. It will be minimal. Traffic<br>generation form the ILC will result in less than a 1%<br>increase in overall traffic in the area. Traffic on the<br>streets surrounding the ILC would be controlled through<br>a Local Area Traffic Management Plan. Road safety will<br>be managed through this process, and the risk of<br>accidents for pedestrians will not change.<br>The growth in train movements is not caused by the<br>development of the ILC. Train growth will occur along<br>the corridor irrespective of the project<br>Mitigation measures to manage noise and air are<br>outlined in chapters 11 &12 and discussed in the<br>Preferred Project Report (PPR).<br>All local ILC impacts however, have been addressed as<br>part of the proposal<br>Noted | 865               | DoP submission number 330 |

| Community and Ecological Area | The only benefit provided by the "Community and<br>Ecological area" is to provide a buffer between terminal<br>operations and the residential area to the south of the site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Other benefits of the area are:<br><b>Green and golden bell frog</b> : It would provide habitat<br>for the green and golden bell frog and provide linkage to<br>other habitats in the vicinity.<br><b>Community uses</b><br>The area also has the potential to provide passive<br>recreation facilities and other community facilities within<br>the tarpaulin factory should this be retained on site. SPC<br>intends to further consult with the community to ensure<br>the area meets community needs | 447               | DoP Submission no 315,158 |
| Community and Ecological Area | Community area - As indicated under Heritage issues it is<br>not believed that the community has much regard for the<br>heritage value of the tarpaulin shed- it is seen as an<br>eyesore. The Strathfield Social Plan would suggest that the<br>greatest priority of need lies in the provision of community<br>meeting rooms and child care. Interpretative signage and<br>displays/ outdoor museum concept may be of benefit in<br>explaining the site's railway history and connections.<br>Similarly the Recreation Plan would suggest augmentation<br>of bicycle linkages especially from Greenacre through to<br>Begnell Field would be welcomed. | Noted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 817               | DoP Submission no 120,181 |

| Consultation Process | As a local resident, I feel that we were not consulted or<br>informed adequately by Sydney Ports Corporation about<br>this proposal. During consultation with local residents, it<br>was obvious that community consultation information<br>detailed in the Environmental Assessment has not been<br>distributed in details. Furthermore, no effort has been made<br>to make the information accessible in different languages.<br>Given the cultural background of our local community and<br>the high population of non-English speaking residents this<br>is of a major concern. | Consultation process<br>800,599,621,539,563,788,87,798,838,801,805,806,807<br>,813.831,835,836,837<br>Community consultation process involved 1800<br>number, email, fax and address for any contact and<br>questions throughout EA development process. A<br>regularly updated web site also provided information<br>about the project, the development process and the way<br>by which the community could have its say.<br>Two community days were held - one in May 2005 to<br>outline process of assessment and seek views from<br>residents and groups, and a second in February 2006<br>during the exhibition of the EA.<br>Council briefings were held for Strathfield, Bankstown,<br>Canterbury, Burwood and Marrickville at the beginning<br>of the process and during the exhibition of the EA.<br>Briefings were offered to a number of community<br>groups. These were accepted by NOPE and the South<br>West Environment Centre.<br>Three newsletters were widely distributed in the area, by<br>direct mail distribution to about 11,000 households, via<br>Councils and mailed to a database of business owners,<br>community groups ands residents. The newsletters<br>were distributed in March and June 2005 and in January<br>2006.<br>The exhibition period was decided and controlled by the<br>Department of Planning. It lasted from 9 January to 20<br>February 2006, taking into account the holiday period,<br>and accordingly was longer than the statutory period<br>required under the Environmental Planning and<br>Assessment Regulation.<br>Sydney Ports will continue to consult with the<br>community during construction and operation of the ILC,<br>should it be approved. It will provide for Community<br>Liaison Groups throughout the construction and<br>operation of the ILC, as part of this continued<br>consultative process.<br><u>NESB communication</u><br><b>800</b> ,633,642,646,838,801,817<br>Interpreter facilities were offered and promoted in all<br>communication material. Ads were placed in community<br>language papers- Arabic, Vietnamese & Chinese<br>Interpreter service available and promoted in all<br>communication material | 800         | DoP Submission no 146 |

| Consultation Process | We feel very strongly about this issue. After reading the EIA we feel less than secure with the public consultation process and the impact of the development. We also disagree with the language used by the consultants to try and soften the impacts when the figures clearly show a negative impact. The language indemnifies the consultants but the public have no recourse after the development has been approved. | Consultation process<br>800, <b>599</b> ,621,539,563,788,87,798,838,801,805,806,807<br>,813.831,835,836,837<br>Community consultation process involved 1800<br>number, email, fax and address for any contact and<br>questions throughout EA development process. A<br>regularly updated web site also provided information<br>about the project, the development process and the way<br>by which the community could have its say.<br>Two community days were held - one in May 2005 to<br>outline process of assessment and seek views from<br>residents and groups, and a second in February 2006<br>during the exhibition of the EA.<br>Council briefings were held for Strathfield, Bankstown,<br>Canterbury, Burwood and Marrickville at the beginning<br>of the process and during the exhibition of the EA.<br>Briefings were offered to a number of community<br>groups. These were accepted by NOPE and the South<br>West Environment Centre.<br>Three newsletters were widely distributed in the area, by<br>direct mail distribution to about 11,000 households, via<br>Councils and mailed to a database of business owners,<br>community groups ands residents. The newsletters<br>were distributed in March and June 2005 and in January<br>2006.<br>Advertisements concerning the open days were placed<br>in local papers, including community language papers -<br>Arabic, Vietnamese and Chinese. Interpreter facilities<br>were offered and promoted in all communication<br>material.<br>The exhibition period was decided and controlled by the<br>Department of Planning. It lasted from 9 January to 20<br>February 2006, taking into account the holiday period,<br>and accordingly was longer than the statutory period<br>required under the Environmental Planning and<br>Assessment Regulation.<br>Sydney Ports will continue to consult with the<br>community during construction and operation of the ILC,<br>should it be approved. It will provide for Community<br>Liaison Groups throughout the construction and<br>operation of the ILC, as part of this continued<br>consultative process. | 599         | DoP Submission no 23    |
| Consultation Process | The 20 February 2006 deadline is insufficient for proper<br>consideration of the environmental assessment which<br>went on view during the annual summer holiday period. I<br>believe this deadline needs to be extended by at least<br>another 3 months.                                                                                                                                                                  | Exhibition time-<br>621,30,838,801,817<br>. The exhibition period was decided and controlled by<br>the Department of Planning. It lasted from 9 January to<br>20 February 2006, taking into account the holiday<br>period, and accordingly was longer than the statutory                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 621         | DoP Submission no 29,72 |

These<br>were accepted by NOPE and the South West<br>Environment Centre.<br>Three newsletters were widely distributed in the area by<br>direc mail distribution to about 11,000 households, via<br>Councils and mailed to a database of business owners,<br>community groups and residents. The newsletters were<br>distributed in March, June 2005 and January 2006.<br>Advertisements concerning the open days were placed<br>in local papers, including community language papers –<br>Arabic, Vietnamese and Chinese. Interpreter facilities<br>were offered and promoted in all communication<br>material. |             |                      |
| Consultation Process | <ul> <li>We write to formally request an extension of the period of exhibition and comment of ONE MONTH in relation to the Enfield Intermodal Logistics Centre, and for a ONE MONTH extension of the time in which to lodge submissions.</li> <li>We intend to make a submission opposing the current proposal for the Enfield Intermodal Logistics Centre. The following factors have, however, made it necessary to seek an extension of time:</li> <li>The tactic of commencing the exhibition period over January, traditionally a holiday period, has effectively cut/ the exhibition period to less than half. Sydney Ports Corporation has spent a considerable amount of time and money on preparation of the EA to expect respondents, especially individuals and community groups, to mount a detailed in response in a matterof a few weeks is not acceptable.</li> <li>The fact that submissions to the Professor Richmond review of the Freight Infrastructure Advisory Board report "Railing Port Botany's Containers" closed last Friday February 10 2006, meant that people concerned with the issues of an Enfield intermodal terminal and freight thave been subject to the "divide and conquer" tactic. Individuals, groups, and indeed organisations have finite time and resources and to have two or more submissions due at roughly the same time is, in our view, not</li> </ul> | Exhibition time<br>621,30,838,801,817<br>Exhibition period took into account the holiday period.<br>The exhibition period was longer than the statutory<br>period required under the Environmental Planning and<br>Assessment Act.<br>Critical Infrastructure development issues                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 30          | DoP Submission no 93 |

| Issue Category       | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Stakeholder | Name                  |

| Consultation Process | As a resident of Marrickville, living right next to the Port<br>Botany freight-line, I am appalled by the extreme & very<br>arrogant lack of consideration that Sydney Ports! has<br>shown to all residents directly affected by the freight-lines in<br>the proposed Enfield Intermodal Logistics Centre.<br>Sydney Ports ought to consult with all residents who would<br>be adversely affected<br>by its proposals. Sydney Ports has neglected to do so thus<br>far.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Consultation process<br>800,599,621,539,563, <b>788</b> ,87,798,838,801,805,806,807<br>,813.831,835,836,837<br>Community consultation process involved 1800<br>number, email, fax and address for any contact and<br>questions throughout EA development process.<br>A regularly updated website also provided information<br>about the project, the development process and the way<br>by which community could have their say.<br>Two community days- one in May to outline process of<br>assessment and seek views from residents and groups,<br>a second in February about EA.<br>Council briefings were held- one in May 2005 to outline<br>process of assessment and seek views from residents<br>and groups, and a second in February 2006 during the<br>exhibition of the EA.<br>Briefings were offered to community groups. These<br>were accepted by NOPE and the South West<br>Environment Centre.<br>Three newsletters were widely distributed in the area by<br>direct mail distribution to about 11,000 households, via<br>Councils and mailed to a database of business owners,<br>community groups and residents. The newsletters were<br>distributed in March, June 2005 and January 2006.<br>Advertisements concerning the open days were placed | 788         | DoP Submission no 112 |

| Consultation Process | It is obvious nobody from SPC has any interest in the<br>residents concerns as they noticeably have not read<br>anything submitted to them.<br>As long as you are seen to be so called consulting seems to<br>be all you care about.                                                                                                                                                                                                                                                                                                                                                                                                        | Consultation process<br>800,599,621,539,563,788, <b>87</b> ,798,838,801,805,806,807<br>,813.831,835,836,837<br>Community consultation process involved 1800<br>number, email, fax and address for any contact and<br>questions throughout EA development process.<br>A regularly updated website also provided information<br>about the project, the development process and the way<br>by which community could have their say.<br>Two community days- one in May to outline process of<br>assessment and seek views from residents and groups,<br>a second in February about EA.<br>Council briefings were held- one in May 2005 to outline<br>process of assessment and seek views from residents<br>and groups, and a second in February 2006 during the<br>exhibition of the EA.<br>Briefings were offered to community groups. These<br>were accepted by NOPE and the South West<br>Environment Centre.<br>Three newsletters were widely distributed in the area by<br>direct mail distribution to about 11,000 households, via<br>Councils and mailed to a database of business owners,<br>community groups and residents. The newsletters were<br>distributed in March, June 2005 and January 2006.<br>Advertisements concerning the open days were placed<br>in local papers, including community language papers –<br>Arabic, Vietnamese and Chinese. Interpreter facilities<br>were offered and promoted in all communication<br>material. | 87          | DoP Submission no 102 |
| Consultation Process | I believe Auburn Council should be included in the<br>consultation process with the RTA and Strathfield and<br>Bankstown Councils regarding trucks using only major<br>roads not residential. Agreement has to be reached before<br>Enfield operations commence, so that at least no more<br>container trailers come down residential streets. This is<br>particularly pertinent to Auburn council if, as stated, the<br>Chullora transfer station for interstate goods is to be grown<br>by 2 or 4 times in the next 20 years<br>Include Auburn Council in consultations re speed and load<br>restrictions on local and residential roads. | SPC invited Auburn council to participate and to have a briefing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 597         | DoP Submission no 21  |

These<br>were accepted by NOPE and the South West<br>Environment Centre.<br>Three newsletters were widely distributed in the area by<br>direct mail distribution to about 11,000 households, via<br>Councils and mailed to a database of business owners,<br>community groups and residents. The newsletters were<br>distributed in March, June 2005 and January 2006.<br>Advertisements concerning the open days were placed<br>in local papers, including community language papers –<br>Arabic, Vietnamese and Chinese. Interpreter facilities<br>were offered and promoted in all communication<br>material. |                  |                           |
| Consultation Process | Community consultation on the Intermodal proposal has<br>been appalling. The EA details<br>the strong make up of non-English speaking families in our<br>and neighbouring local government areas. At the same<br>time no effort has been made by the Sydney Ports<br>Corporation to make accessible information about the<br>project in languages other than English, As a result the<br>community is uninformed about the proposal. This is further<br>exacerbated by holding the exhibition period over the<br>Christmas break, a time when families are traditionally on<br>holiday. | Consultation process<br>800,599,621,539,563,788,87,798, <b>838</b> ,801,805,806,807<br>,813.831,835,836,837<br>Community consultation process involved 1800<br>number, email, fax and address for any contact and<br>questions throughout EA development process.<br>A regularly updated website also provided information<br>about the project, the development process and the way<br>by which community could have their say.<br>Two community days- one in May to outline process of<br>assessment and seek views from residents and groups,<br>a second in February about EA.<br>Council briefings were held- one in May 2005 to outline<br>process of assessment and seek views from residents<br>and groups, and a second in February 2006 during the<br>exhibition of the EA.                                                                           | 838              | DoP Submission no 173,150 |

| Issue Category       | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Response         Briefings were offered to community groups. These were accepted by NOPE and the South West         Environment Centre.         Three newsletters were widely distributed in the area by direct mail distribution to about 11,000 households, via         Councils and mailed to a database of business owners, community groups and residents. The newsletters were distributed in March, June 2005 and January 2006.         Advertisements concerning the open days were placed in local papers, including community language papers – Arabic, Vietnamese and Chinese. Interpreter facilities were offered and promoted in all communication material.         Exhibition time         621,30,838,801,817         Exhibition period took into account the holiday period. The exhibition period was longer than the statutory period required under the Environmental Planning and Assessment Act.         NESB Communication:         800,633,642,646,838,801,817         Interpreter facilities were offered and promoted in all communication material.         Exhibition material. | Consultation Process | I would also like to express serious concern regarding the<br>level of community consultation. No effort has been made<br>by the Sydney Ports Corporation to make accessible<br>information about the project in languages other than<br>English. This is unacceptable given the high proportion of<br>non-English speaking background residents. Further by<br>holding the exhibition period over the Christmas break, a<br>time when families are traditionally on holiday, it is little<br>wonder that many persons in the community are<br>uninformed about this proposal. This fact could seriously<br>jeopardise acceptance of this facility in our community both<br>during construction and operation into the future. | communication material<br><u>Consultation process</u><br>800,599,621, <b>539</b> ,563,788,87,798,838, <b>801</b> ,805,806,807<br>,813.831,835,836,837<br>Community consultation process involved 1800<br>number, email, fax and address for any contact and<br>questions throughout EA development process.<br>A regularly updated website also provided information<br>about the project, the development process and the way<br>by which community could have their say.<br>Two community days- one in May to outline process of<br>assessment and seek views from residents and groups.,<br>a second in February about EA.<br>Council briefings were held- one in May 2005 to outline<br>process of assessment and seek views from residents<br>and groups, and a second in February 2006 during the<br>exhibition of the EA.<br>Briefings were offered to community groups. | contamination  | How will contamination of the proposed frog habitat be avoided?                                                                                                                                                                                                                                                                                                                                                                   | Drainage and associated pollution prevention devices<br>would be developed during detailed design to prevent<br>contamination of the frog habitat from operations on site.                                                                                                                                                                                                                                                                                          | 447         | DoP Submission no 315,158 |
|                | If the aquifers and Mount Enfield are contaminated, what<br>chance will the frogs have?                                                                                                                                                                                                                                                                                                                                           | Further investigations are to be undertaken into the contamination hotspot (As) within the proposed Community and Ecological area to determine the significance and extent of the elevated levels, prior to assessing remediation levels. A risk assessment would be undertaken to determine whether there is a threat to sensitive receptors including the Green and Golden BBell Frog. This information would be used to assess remediation options, if required. |             |                           |
|                | Much of the area set aside for 'restricted' recreational<br>access by the community is a contaminated toxic stockpile<br>of material previously cleared from the rest of the site.<br>Known locally as Mount Enfield, it cannot be appropriate to<br>use this site for recreation of any kind.                                                                                                                                    | A Remediation Action Plan is to be prepared and<br>identified contamination to be remediated prior to<br>earthworks commencing. Validation testing of<br>remediated hotspots and all exposed surfaces is to be<br>undertaken to ensure contaminant levels are below<br>threshold levels approved within the RAP.                                                                                                                                                    |             |                           |
|                | The implication of the words 'restricted access' is not clear.<br>Will Mount Enfield be developed as a mountain bike trail or<br>something similar?                                                                                                                                                                                                                                                                               | SPC intends to further consult with the community to ensure the area meets community needs                                                                                                                                                                                                                                                                                                                                                                          |             |                           |
|                | Will the green and golden bell frogs survive the toxic leachate emanating from this stockpile?                                                                                                                                                                                                                                                                                                                                    | See above comments                                                                                                                                                                                                                                                                                                                                                                                                                                                  |             |                           |
|                | What contaminants are in the stockpile? Is this the source<br>of the contaminants in the two aquifers identified by Sydney<br>Ports?                                                                                                                                                                                                                                                                                              | See above comments re stockpile.<br>These would be remediated prior to earthworks<br>commencing. Contamination in the underlying aquifers<br>is unlikely to be related to the stockpiles.                                                                                                                                                                                                                                                                           |             |                           |
|                | What testing for contamination has been done in the Cox's Creek channel? This needs to be done to determine what level of pollution exists now so that any increases can be measured.                                                                                                                                                                                                                                             | Water quality in Coxs Creek is detailed in Chapter 10 and Appendix D.                                                                                                                                                                                                                                                                                                                                                                                               |             |                           |
| contamination  | The artist's impression of the renovated tarpaulin factory<br>shows the mountains absent. Don't move those mountains!<br>These mountains were made in the 1992 to hold toxic and<br>carcinogenic substances from previous use as a<br>marshalling area. Moving those mountains will cause the<br>dust to fly around and settle in nearby residential areas.<br>More of the health effects of moving such dust need to be<br>done. | A Remediation Action Plan is to be prepared and<br>identified contamination to be remediated prior to<br>earthworks commencing. Validation testing of<br>remediated hotspots and all exposed surfaces is to be<br>undertaken to ensure contaminant levels are below<br>threshold levels approved within the RAP.<br>Measures included in the Dust Management Plan would<br>be implemented during construction to prevent dust<br>impacts.                           | 814         | DoP Submission no 135     |

| Design         | We wish to ensure that any development of an ILC is<br>connected by the existing freight line to the Sydney<br>Harbour berths at White bay.<br>The exhibited EA does not appear to deal with this issue.<br>It is important to us,and to the community because White<br>Bay wharves are the sole Harbour wharves capable of rail<br>servicing with exiting infrastructure, and there appear to be<br>no real opportunities for provision of additional rail<br>infrastructure to other wharves. The 'working harbour'<br>concept supports our view.<br>The freight line from White Bay joins the line to Botany bay<br>between Hurlstone Park and Dulwich Hill stations; freight<br>from White Bay would flow to the intermodal Centre in<br>harmony with that from Botany Bay. | Container and general cargo operations moved from<br>White Bay to Darling Harbour in November 2003. There<br>is no current lessee/operator utilising rail transport.<br>However, new maritime uses may in future require rail<br>transport from White Bay. | 822               | Submission No 43 |

| EIS process    | The EIS has overlooked this area where my home is<br>located. It also has incorrect information regarding the<br>intersection of Norfolk Rd and Roberts Rd. The EIS should<br>include the area where my home is located as it has a<br>history of problems relating to industry near the proposed<br>ILC.                                                                                                                                                                                                                                                                                                                                                                        | The intersection has been reviewed and the information provided is appropriate.<br>The potential impacts on all residential areas were addressed.                                                                                                                                                                                                                                                                                                                                                                    | 539         | DoP Submission no 35      |
| EIS process    | The study area in the EA is too narrowly drawn. There will<br>obviously be adverse environmental effects over a much<br>wider area. For instance where my family live in Strathfield<br>we are already assailed daily screeching trains, and idling<br>engines from the freightlines north of the study site; or by<br>compression braking of heavy vehicles on Centenary Drive<br>as they take the overhead bridge at the Hume Highway.<br>There will be substantial visual impacts over a much wider<br>area. [For instance much of Strathfield e.g. south Street,<br>overlooks the ILC site and will have its skyline altered by<br>the large warehouse structures and cranes | The study areas were defined based on the proposed<br>use of the property as an intermodal logistics centre.<br>The growth in train movements is not caused by the<br>development of the ILC. Train growth will occur along<br>the freight rail corridor irrespective of the project. All<br>local ILC impacts however, have been addressed as<br>part of the proposal.<br>The traffic and visual impacts of the development are<br>defined in EA Report chapters 7 and 16 respectively and<br>are considered minor. | 856         | DoP submission number 329 |

| ESD            | Impacts on the dozens of small businesses in the location,<br>is also not canvassed. If ever a proposal required<br>application of the precautionary principle and consideration<br>of intergenerational equity this is one.                                                                                                                                                                                           | Review of the Precautionary Approach and Inter<br>Generational Equity is provided in Section 22.5.1 and<br>22.5.2 of the EA Report.                                                                                                                                                                                                                                                                                                       | 817         | DoP Submission no 120,181         |
|                | Ecologically sustainable development - this development is<br>not sustainable given the acknowledged deficiencies of the<br>site with respect to dysfunctionality of the road network and<br>existing issues with respect to external rail and road noise<br>and pollutants                                                                                                                                            | Traffic, rail, noise and air quality are considered in<br>Chapters 7, 8, 11 and 12 of the EA Report. ESD is<br>considered under Project Justification in Chapter 22.                                                                                                                                                                                                                                                                      |             |                                   |
|                | The precautionary approach suggests that even although<br>the development itself may be deemed to have low impact<br>( and this is highly contestable) the overall context of the<br>development is negative                                                                                                                                                                                                           | Mitigation and management measures would be<br>implemented through construction and operation to<br>prevent the release of pollutants and manage identified<br>negative impacts.                                                                                                                                                                                                                                                          |             |                                   |
|                | Intergenerational equity - to approve this development<br>reserves problems of remediation and social cost for future<br>generations                                                                                                                                                                                                                                                                                   | When considering ESD the transport of goods via rail is<br>a more sustainable alternative than transport by road.<br>Remediation of contamination on site and reuse of<br>facilities currently present has ESD benefits. The railway<br>infrastructure to be provided would ensure long term<br>operational benefits for future generations.                                                                                              |             |                                   |
|                | Intangible costs - no attempt has been made to cost<br>cumulative impacts of the development in the wider context<br>of the region - costs of accidents, human health opportunity<br>costs in property values, costs to the transport industry of<br>queuing and congestion off site, costs to existing small<br>businesses etc.                                                                                       | Cumulative impact assessment for air and noise are<br>provided in Chapters 12 and 11.<br>Safety (accidents), human health, property impacts,<br>traffic and business impacts are considered in Chapters<br>20, 17 and 7 of the EA Report.                                                                                                                                                                                                 |             |                                   |
| ESD            | Use of the Enfield Marshalling Yards as a freight terminal should only be approved if it is economically viable and environmentally sustainable.                                                                                                                                                                                                                                                                       | Project need and justification is provided in Chapters 3<br>and 22 of the EA Report. SPC is willing to invest in the<br>development of the property                                                                                                                                                                                                                                                                                       | 713         | DoP Submission no 138,140,143,119 |
| ESD            | As it stands it seems we are importing too many cheap<br>goods that end up after a year or two on the footpaths of<br>local streets for councils to remove.<br>If today there are 28 rail freight movements from Port<br>Botany to Enfield per day and that by 2016, in 10 years time<br>there will be 94 per day- almost a fourfold increase - will<br>that mean Sydney has to dispose of 4 times today's<br>rubbish. | Government policy should address the origin and<br>packaging of imported goods. The ILC would provide a<br>more sustainable means of distributing those imported<br>goods.<br>Waste is a significant issue in all developed countries.<br>The environmental management measures to be<br>implemented on site would ensure that the waste<br>hierarchy (reduce, reuse, recycle) is employed for both<br>construction and operation stages. | 597         | DoP Submission no 21              |
| ESD            | It is our contention that rail and road access to Port Botany<br>needs to be improved (part 1 Recommendation 15), but it<br>is imperative that steps be taken to invest in the freight<br>corridor between Newcastle and Sydney and in acquiring<br>land at the port of Newcastle in the immediate future.                                                                                                             | Noted                                                                                                                                                                                                                                                                                                                                                                                                                                     | 447         | DoP Submission no 315,158         |

|  | It is our strongly held view that freight rail links to Newcastle<br>and its port must be given high priority if NSW is to grow<br>and prosper in the long term. Making Sydney unliveable<br>through a short term 'quick fix' will not achieve this. | Noted. |  |

| flora and fauna | The proposed location for the Intermodal contains habitat<br>for the Green and Golden Bell- Frog<br>(L/tor/a aurea) a species listed as Endangered under both<br>State and Federal Threatened Species Legislation. The<br>Environmental Assessment states that the Enfield<br>Marshalling Yards contains marginal habitat for Bell frogs.<br>Although true, it is the combination of this and adjacent<br>areas that provide the habitat required for the species.<br>As such it is not appropriate to consider the site in isolation,<br>but rather as a key component of a series of fragmented<br>habitats that when considered together make up the total<br>habitat. The impact of the proposed Intermodal needs to be<br>considered in this context. | It is intended that a foraging habitat for the Green and<br>Golden Bell Frog would be established on the<br>community and ecological area at the southern end of<br>the site. The EA, chapter 13, describes how the ILC<br>foraging habitat area links to existing adjacent areas.<br>This would aim to link to other habitats in adjacent areas<br>and not consider it in isolation.                                                                  | 838               | DoP Submission no 173,150 |
| flora and fauna | As for the green and golden bell frog and other frogs still<br>living within the environs of the old Enfield marshalling<br>Yards (Now ILC site) put in ponds, create habitats and<br>foraging areas, consider them in the process. Plant trees<br>and native grasses if they will grow on old rail fill and spoil.<br>But most of all don't cause them grief by despoiling and<br>defiling their environment any more.                                                                                                                                                                                                                                                                                                                                    | It is intended that a foraging habitat for the Green and<br>Golden Bell Frog would be established on the<br>community and ecological area at the southern end of<br>the site.<br>The EA, chapter 13, describes how the ILC foraging<br>habitat area links to existing adjacent areas.<br>This would aim to link to other habitats in adjacent areas<br>and not consider it in isolation.                                                               | 793               | DoP Submission no 147     |
| flora and fauna | The provision of a habitat for frogs does not impress us at<br>all because we know that frogs will not be able to cope with<br>the pollution created by intermodal activity. It is not just<br>about having a habitat, it is about having an unpolluted<br>healthy habitat.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | It is intended that a foraging habitat for the Green and<br>Golden Bell Frog would be established on the<br>community and ecological area at the southern end of<br>the site.<br>SPC would ensure that this is habitat supports and<br>encourages improvement and continued health for<br>frogs. Frog ponds are located away from the intermodla<br>activity and will be fed from clean runoff which may be<br>roof runoff.                            | 736               | DoP Submission no 129,130 |
| flora and fauna | Disturbance of the green and golden bullfrog ponds which is boarding on extinction                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | It is intended that a foraging habitat for the Green and<br>Golden Bell Frog would be established on the<br>community and ecological area at the southern end of<br>the site.<br>SPC would ensure that this is a habitat supports and<br>encourages improvement and continued health for the<br>frog.                                                                                                                                                  | 512               | DoP Submission no 45      |

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | ID          |                       |
| Heritage/Archaeology | The Enfield Marshalling Yards has important heritage<br>significance and it is disappointing that this site will be so<br>dramatically altered in future, with little reference to its past<br>and importance in the local community.                                                                                                                                                                                                                                                                                                                                                                                  | A detailed heritage study of the site was undertaken,<br>details are provided in Chapter 15 and Appendix H.                                                                                                                                                                                                                                                                                                                                                                                                    | 31          | DoP Submission no 136 |
|                      | According to Project Newsletter Issue 3 January 2006,<br>Sydney Ports intends to make this a gift to the community.<br>If Sydney Ports intends to 'gift' these to the community,<br>Sydney Ports should finance restoration, maintenance and<br>determine a genuine use for these sheds. If a viable and<br>sustainable use can not be determined, the sheds should<br>be moved and reassembled to another site. The burden of<br>restoration and maintenance should not fall to the<br>community and local Council, when this is the clear<br>responsibility of the current owners.                                   | Reuse options for the Tarpaulin Factory will be further<br>investigated as part of the detailed design phase of the<br>project. The Tarpaulin Factory will be stabilised against<br>further deterioration and, in consultation with the<br>Heritage Office and the community, options for its reuse<br>at its present site will be investigated. Only if on-site<br>reuse is found to be unachievable will consideration be<br>given to its relocation off-site to a railway heritage<br>museum or demolition. |             |                       |
|                      | In reference to the heritage assessment, the Strathfield<br>District Historical Society does not agree with some of the<br>recommendations of the report in particular.                                                                                                                                                                                                                                                                                                                                                                                                                                                | NOted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |             |                       |
|                      | The Administration Building, built c. 1940s appears to be in<br>good condition. This style of building is rare in Strathfield<br>Municipality, which has few historic industrial buildings in<br>existence. The former Ford Factory on Parramatta Road<br>Homebush and the Weston Milling site on Braidwood<br>Avenue Enfield are the only industrial buildings which have<br>heritage status. We do not agree that this building has no<br>heritage status, it is certainly locally significant. This<br>building could be reused or readapted for other uses such<br>as administration, cafe for workers onsite etc. | The proposed site layout does not provide opportunities for retention for the Administration Building.                                                                                                                                                                                                                                                                                                                                                                                                         |             |                       |
|                      | The Yard Master's Office has lost some of its features but<br>restoration of this building or reuse would be not difficult as<br>the building is substantially in-tact. We do not agree that<br>this building has no heritage status, it is certainly locally<br>significant. Further, the building appears to be in<br>reasonable condition and there would be no reason not to<br>maintain and reuse this building. The retention and reuse of<br>these buildings would provide aesthetic enhancement in<br>the proposed development of this site. It would also provide<br>a visible link with the site's history.  | The Yard Master's office has been assessed as being of local significance due to fabric losses. The proposed site layout does not provide opportunities for retention of this structure, as such full archival recording of this item would be undertaken prior to demolition.                                                                                                                                                                                                                                 |             |                       |
|                      | These heritage items are owned and managed by the NSW Government, yet most are deteriorated, and have not been maintained. It is remarkable that items which the Government refers to as 'Assets' are in such poor condition and worse, that the few items which appear to be in good condition and could be easily reused such as the Administration Block, have been assessed as having no heritage significance.                                                                                                                                                                                                    | Noted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |             |                       |

| Hydrology      | Drainage and sewerage could cause further problems as<br>heavy rains in past years have caused floods in the Cooks<br>River area. This flood plain has been alleviated by the<br>upgrading of the river but since the work was finished we<br>have not been out of drought conditions. | Noted. Hydrology and Hydraulics is assessed in<br>Chapter 10 and Appendix D of the EA Report. Further<br>consideration of hydrological issues would be<br>undertaken during detailed design. The EA report<br>concludes that all drainage water for a I in 10 ARI will be<br>retained in a site detention basin | 587         | DoP Submission no 5 |

| justification for project | South West Enviro Centre supports the government's<br>efforts to separate passenger and freight traffic and to<br>increase the rail share of container movement. However,<br>relying on the Enfield facility to achieve this is a<br>short-sighted attempt to be seen to be doing something in<br>the short term. We believe that the Government should be<br>urgently securing land at Eastern Creek and Moorebank so<br>that more containers .can be transported greater distances<br>by rail, via Enfield. If the expansion at Enfield goes ahead,<br>development of outlying terminals is unlikely to happen for<br>many years.                                                                                                                                                                                                                                                                                                                                                                                                                                | The FIAB report prepared as part of the Government's<br>Metropolitan Intermodal Freight Strategy for Import and<br>Export Containers (refer Metropolitan Strategy –<br>Transport Strategy for Sydney) supports the need for<br>the Enfield ILC as part of a number of intermodal<br>terminals required to serve the Sydney Basin and to<br>achieve the Governments mode share target.<br>Alternatives have been considered in Chapter 3 of the<br>EA Report. This provides details of the required<br>characteristics required for an intermodal facility.<br>The site at Enfield is considered to be the most suitable<br>site to service the inner and middle western areas of the<br>Sydney market, given the area available, its location in<br>an industrial area and its direct connection to Port<br>Botany by a dedicated rail freight line. The<br>environmental assessment has demonstrated that<br>impacts on the local community will be able to be<br>managed. Other sites further west and south west will<br>also be developed. Containers from Newcastle or Port<br>Kembla would still need to travel by train or truck into the<br>inner and middle western areas of Sydney where the<br>market catchment is.          | 447         | DoP Submission no 315,158 |
| justification for project | A Commission of Inquiry and the DoP has recommended<br>against the Port Botany expansion, so the NSW<br>Government is not justified in pushing ahead. There is a lot<br>of support for Newcastle to become a container port. A port<br>expansion of Newcastle instead of Botany would render the<br>Port Enfield proposal unnecessary.<br>The Summer Hill- Ashfield Greens support the aim of the<br>NSW Government to transfer more freight movements from<br>road to rail as a way of reducing greenhouse gas<br>emissions. However, the above proposal puts freight on rail<br>only for the short distance between Port Botany and<br>Enfield. There is already a direct link between Sydney and<br>Newcastle. Instead of expanding Port Botany and<br>constructing the Enfield Intermodal Logistics Centre, the<br>NSW Government should upgrade the ports of Newcastle<br>and Port Kembla to cater for any increase in freight<br>movements. This would result in employment growth in<br>Newcastle and Wollongong, both areas in need of more<br>employment. | Noted<br>The FIAB report prepared as part of the Government's<br>Metropolitan Intermodal Freight Strategy for Import and<br>Export Containers (refer Metropolitan Strategy –<br>Transport Strategy for Sydney) supports the need for<br>the Enfield ILC as part of a number of intermodal<br>terminals required to serve the Sydney Basin and to<br>achieve the Governments mode share target.<br>Alternatives have been considered in Chapter 3 of the<br>EA Report. | justification for project | NoPE does not agree that intermodal terminals and<br>associated rail upgrades should be treated as critical<br>infrastructure whose approval is at the sole discretion of the<br>Minister for Planning. What faith can we have in a Minister<br>who declared the proposed desalination plant at Kurnell as<br>the first ever "critical development" and then downgraded it<br>to a "last resort" option a few months later? Apparently a<br>development is only "critical" if there is no voter backlash<br>associated with it. | Noted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 30          | DoP Submission no 93  |
| justification for project | In February 2003, a review called the Morris Report of an<br>earlier version of this development proposal concluded that<br>the Enfield ILC should not go forward. Essentially, very little<br>has changed since then. Why is this proposal being<br>reconsidered when expert reviewers have concluded that<br>this development will largely have a negative impact?                                                                                                                                                            | The proposed ILC differs from the previous Intermodal Logistics Terminal put forward for the Enfield site, which was to manage a throughput of 500 000TEUs, rather than 300,000 TEUs which is currently being proposed. Further details of the project need and alternatives are provided in Chapter 3.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 786         | DoP Submission no 106 |
| justification for project | Why would you want such a storage depot in the middle of<br>already traffic only 18 kms away from Port Botany?<br>It simply does not make sense when there are rail links to<br>places like Newcastle and Wollongong that need the work.                                                                                                                                                                                                                                                                                        | Information on project need and alternatives is provided<br>in Chapter 3.<br>Containers from Newcastle or Port Kembla would still<br>need to travel by train or truck into the inner and middle<br>western areas of Sydney where the market catchment<br>is.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 87          | DoP Submission no 102 |
| justification for project | Do we need this expansion of the freight network?<br>Should Sydney be the main port of call?<br>Does Port Botany need to be expanded?<br>Newcastle and Wollongong are willing to take some of the<br>burden off Sydney. Goods could go to and from country<br>areas from these two ports, country rail revived to<br>accommodate this.                                                                                                                                                                                          | The FIAB report prepared as part of the Government's<br>Metropolitan Intermodal Freight Strategy for Import and<br>Export Containers (refer Metropolitan Strategy –<br>Transport Strategy for Sydney) supports the need for<br>the Enfield ILC as part of a number of intermodal<br>terminals required to serve the Sydney Basin and to<br>achieve the Governments mode share target.<br>Alternatives have been considered in Chapter 3 of the<br>EA Report. This provides details of the required<br>characteristics required for an intermodal facility.<br>The site at Enfield is considered to be the most suitable<br>site to service the inner and middle western areas of the<br>Sydney market, given the area available, its location in<br>an industrial area and its direct connection to Port<br>Botany by a dedicated rail freight line. The<br>environmental assessment has demonstrated that<br>impacts on the local community will be able to be<br>managed. Other sites further west and south west<br>mayalso be developed in the future Containers from<br>Newcastle or Port Kembla would still need to travel by<br>train or truck into the inner and middle western areas of<br>Sydney where the market catchment is. | 793         | DoP Submission no 147 |
| justification for project | Too many containers are being trucked along suburban<br>streets instead of travelling closer to their destination by<br>rail. I am astounded that SKM could promote Enfield as<br>being most appropriate by being 'located within the market<br>catchment it would serve when it is at the very easternmost                                                                                                                                                                                                                     | The FIAB report prepared as part of the Government's<br>Metropolitan Intermodal Freight Strategy for Import and<br>Export Containers (refer Metropolitan Strategy –<br>Transport Strategy for Sydney) supports the need for<br>the Enfield ILC as part of a number of intermodal                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 597         | DoP Submission no 21  |

| Issue Category            | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Stakeholder | Name                      |

|                           | tip of that 'inner and Middle West region' of Sydney that<br>receives 80% of import and export containers in Sydney.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | terminals required to serve the Sydney Basin and to<br>achieve the Governments mode share target.<br>The ILC is the only suitably sized industrial site within<br>the market catchment area it serves, linked by a<br>dedicated freight line to the port.<br>Alternatives have been considered in Chapter 3 of the<br>EA Report. This provides details of the required<br>characteristics required for an intermodal facility.<br>The site at Enfield is considered to be the most suitable<br>site to service the inner and middle western areas of the<br>Sydney market, given the area available, its location in | ID          |                           |
|                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | an industrial area and its direct connection to Port<br>Botany by a dedicated rail freight line. The<br>environmental assessment has demonstrated that<br>impacts on the local community will be able to be<br>managed. Other sites further west and south west will<br>also be developed. Containers from Newcastle or Port<br>Kembla would still need to travel by train or truck into the<br>inner and middle western areas of Sydney where the<br>market catchment is.                                                                                                                                           |             |                           |
| justification for project | If you want a larger one-off benefit to the state, it's to<br>privatise the land into smaller blocks and build factories<br>and light industrial units. This will be of greater benefit not<br>only to the state because of the one-off selling of the land,<br>but also generate a recurrent benefit to the local economy,<br>the state's economy and national economy. Privatising and<br>subdividing the land into factories and light industrial areas,<br>goods and services will add to Received the national<br>balance of payments - this is because more jobs will be<br>created than the current proposed facility, goods and<br>services will be produced adding to the national accounts<br>will be produced. On a national economic point of view, the<br>proposed facility given the lack of infrastructure will only<br>encourage the importing of goods which will only decrease<br>the balance of payments. | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 814         | DoP Submission no 135     |
| justification for project | Why the freight industry dependent as it is on the efficiency<br>of the road network and the absence of congestion and<br>queuing would be remotely interested in the Enfield<br>location as an economically viable proposition, which can,<br>according to the Environmental Assessment, only get<br>worse over time, is unfathomable.<br>Further, suitability of the site in terms of its ability to cope                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | A network of intermodals across Sydney is proposed to<br>transfer freight from road to rail to minimise the volume<br>of trucks on the road from Port Botany. Further details<br>are provided in Chapter 3.<br>Traffic issues are addressed in Chapter 7 and Appendix                                                                                                                                                                                                                                                                                                                                                | 817         | DoP Submission no 120,181 |
|                           | with the constraints provided by an already dysfunctional<br>road network must be a key consideration if the facility is to<br>achieve long term economic viability from freight operators'<br>viewpoint.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | B.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |                           |

| justification for project | I am not convinced that an Intermodal Facility in the Enfield<br>location has been justified on economic, social or<br>environmental grounds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Noted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 817         | DoP Submission no 120,181 |
|                           | It would seem that the boundary set by Sydney Ports is<br>roughly M7 to the west, M4 to the north but taking in from<br>Blacktown to Parramatta and the M5 to the south taking in<br>Liverpool, Moorebank and Milperra. Clearly the Enfield site<br>is to serve much wider than the 'local" market, however<br>defined, or indeed the "inner western" market. This<br>suggests that there has been no consideration of, nor likely<br>implementation of a network of freight terminals in the near<br>or distant future as recommended by the FIAB and Milton<br>Morris. The stated cap on throughput of 300,000 ten's is<br>therefore hardly credible. | The throughput limit on the site is set at 300 000 TEUs.<br>The proposed ILC forms part of the proposed network of<br>intermodals.<br>The FIAB report prepared as part of the Government's<br>Metropolitan Intermodal Freight Strategy for Import and<br>Export Containers (refer Metropolitan Strategy –<br>Transport Strategy for Sydney) supports the need for<br>the Enfield ILC as part of a number of intermodal<br>terminals required to serve the Sydney Basin and to<br>achieve the Governments mode share target. It should<br>be noted SPC does not own the other sites identified iin<br>the FIAB report for future ILCs. |             |                           |
|                           | The notion of Enfield as the only terminal would underscore<br>why the catchment market envisaged in the EA and<br>Sydney Ports rational and justification is so wide it also may<br>help explain the reluctance of Sydney Ports and the<br>framers of the EA to take any real responsibility for off site<br>impacts or off site improvements that might make the<br>proposal actually work and truly ameliorate adverse effects<br>on local communities.                                                                                                                                                                                              | This is a matter for the NSW Government and is addressed in the Metropolitan Strategy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 817         | DoP Submission no 120,181 |
|                           | This requires a whole of government approach. The ability<br>or indeed the intention of the proponents to cap output to<br>300,000 teu output is not credible under these<br>circumstances.<br>Clearly the Enfield site is to serve much wider than the<br>'local' market, however defined, or indeed the " inner<br>western" market. This suggests that there has been no<br>consideration of nor likely implementation of a network of<br>freight terminals in the near or distant future as<br>recommended by the FIAB and Milton Morris. The stated<br>cap on throughput of 300,000 ten's is therefore hardly<br>credible.                          | The ILC is designed for a throughput of 300 000TEUs only and this will be capped by conditions of consent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |             |                           |
| justification for project | The role of the existing National rail terminal at Chullora. If<br>Enfield is now to handle not only imports but also exports is<br>this enlarged use intended as a competitive or<br>complementary operation? With 2 operations side by side<br>how will traffic and localised impacts of combined activities<br>be managed and controlled?                                                                                                                                                                                                                                                                                                            | Chullora deals primarily with interstate freight, not port related.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 817         | DoP Submission no 120,181 |
|                           | If the capacity of TEU's increases, how will absolute<br>numbers and therefore volume of freight handled be<br>contained? If no further terminals contained in the overall<br>FIAB recommendations are developed through lack of<br>commitment or funding or inability to achieve dedicated<br>freight lines, where does that leave Enfield?                                                                                                                                                                                                                                                                                                            | The FIAB report prepared as part of the Government's<br>Metropolitan Intermodal Freight Strategy for Import and<br>Export Containers (refer Metropolitan Strategy –<br>Transport Strategy for Sydney) supports the need for<br>the Enfield ILC as part of a number of intermodal<br>terminals required to serve the Sydney Basin and to                                                                                                                                                                                                                                                                                               |             |                           |

| justification for project | The capacity of the intermodal terminal at Enfield should<br>not be expanded. It could be upgraded to handle<br>containers and trucks more efficiently, but expansion is<br>unnecessary to achieve efficiencies. Enfield should be a<br>much smaller component in the strategy covered by this<br>report.                                                                                                                                                                                                                                                                                                                         | The provision of intermodal facilities at Enfield has<br>reduced from previous plans for a 500 000 TEU facility<br>to the current proposal for 300 000 TEUs. The potential<br>market for an intermodal facility has been examined<br>using volumes of import and exports delivered to or<br>coming from the inner and middle western areas of<br>Sydney. This identified a market for another intermodal,<br>by 2011 of approximately 500,000 TEUs. Further details<br>are provided in Chapter 3. | 447         | DoP Submission no 315,158 |
| justification for project | I make the point that there is very little sense in locating an<br>Intermodal Logistics Centre in Enfield some 18km from<br>Port Botany. The economic viability of double<br>handling and transporting the containers for such a short<br>distance is questionable.<br>I call on the Department of Planning to carefully consider<br>the logic of an Intermodal Logistics Centre located at<br>Enfield, at a time when no commitment has been made to<br>implementing the recommendations of the Freight<br>Infrastructure Advisory Board report "Railing Port Botany's<br>Containers" nor the recommendations of the Hon. Milton | Further consideration of the need for an intermodal facility at Enfield is provided in Chapter 3.<br>Noted.                                                                                                                                                                                                                                                                                                                                                                                       | 801         | DoP Submission no 149,183 |

| Land Use       | It should be kept in mind that the nearby Pacific National<br>Terminal makes a major contribution to night-time road<br>congestion, noise, light spill and pollution in the area, as<br>do the numerous traffic generating business operations at<br>Chullora, such as Australia Post, News Ltd, Fairfax,<br>Weston's Bakery, and the Waste Recycling Centre, etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Noted                                                                                                                                                                                                                                                                                                                                                                                | 447               | DoP Submission no 315,158 |
| Land Use       | It cannot be overstated that this proposal is for massive and<br>some would contend over development within an existing<br>industrial area that is surrounded by residential areas. The<br>predominant land use is residential, not industrial.<br>The EA states that the site is ideally located in terms of<br>accessibility to the local and regional road network and the<br>proposed land use matches the existing land use for the<br>area (p!6Final Transport Working paper). This is patently<br>false. The predominant land use is residential. The former<br>Enfield Marshalling Yards site is part of an isolated<br>industrial pocket surrounded by low density and far the<br>most part quality housing or housing undergoing<br>renovation/reconstruction in the suburbs of Strathfield<br>South, Belfield, Greenacre and Belfield. The site is also<br>adjacent to the Hume Highway, targeted by the State<br>Government for higher density residential development.<br>How can this be compatible with the intermodal terminal<br>proposed | Further details on land use are provided in Chapter 14.<br>The land use map (Figure 14-2), based on the LEP<br>zoning, shows the immediate surroundings to be<br>industrial with residential development to the south east<br>of the proposed ILC.SPC is not aware of any State<br>Government plans to redevelop the proposed ILC site<br>for higher density residential development | 817               | DoP Submission no 120,181 |
| Land Use       | Most of Liverpool Road at the east of the proposed Enfield<br>ILC is residential, mainly home units and townhouses.<br>Many residential areas of Strathfield and Strathfield South<br>are accessed from Liverpool Road., / , Streets such as<br>Hedges Avenue, Wallis Avenue and Homebush Road<br>intersect with Liverpool Road.<br>While there are larger businesses in Cosgrove Road such<br>as Toyo Tyres, one of the/, businesses identified by<br>Sydney Ports as a 'key business' in the Enfield Catchment<br>area, there are many smaller businesses on Cosgrove<br>Road such as smash repairers, auto, repairers,<br>transmission, paving companies etc. These businesses<br>service the local and regional community and depend on<br>access and on-street parking for their customers.                                                                                                                                                                                                                                                           | Noted<br>There is no intent to prevent legal on-street parking in<br>Cosgrove Rd. The requirements of local businesses<br>would be considered during preparation of the Local<br>Area Traffic Management Plans.                                                                                                                                                                      | 31                | DoP Submission no 136     |
| Land Use       | Sydney Ports' estimation of the extent of industrial property<br>in the inner and middle- western suburbs of Sydney does<br>not take into account the fact that many industrial<br>properties in these suburbs are being sold and<br>re-developed for other uses, such as commercial and<br>residential.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Land use changes from industrial to residential will not<br>be at a significant scale. The predomionate uses will be<br>as specified in the EA.                                                                                                                                                                                                                                      | 447               | DoP Submission no 315,158 |
| Land Use       | The current proposal does not fully utilize the land. It is far<br>more efficient to load the goods onto b-doubles and<br>semi-trailers than to offload containers from the train and<br>offload the goods from the containers into smaller trucks.<br>Simulation studies will probably show that it is more<br>efficient to load containers made specifically for transport                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Two thirds of the containers through the ILC will be<br>offloaded directly onto trucks. The warehousing will<br>provide for about one third of the containers to be<br>broken down into smaller components for transport off<br>site in smaller trucks – 8-10 tonnes.                                                                                                                | 814               | DoP Submission no 135     |

|                | on ships and b-doubles and semis than to offload the goods from containers and then place them into trucks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                      |                   |                           |
| Land Use       | Any use of the Enfield Marshalling Yards as a freight<br>terminal should not be approved. The site is completely<br>unsuitable for such facility given its proximity residential<br>areas and the adverse community and environmental<br>impacts the redevelopment would create. It would have<br>disastrous impacts on our community, our environment and<br>on our roads.                                                                                                                                                                                                    | The surrounding area is predominantly industrial. A series of mitigation and management measures are proposed for operation to minimise the potential impact on sensitive receivers.                                                                                                                 | 794               | DoP Submission no 117     |
| Land Use       | (Other development near the site includes) Norfolk Village<br>and other homes, Chullora Primary School, Malek Fahd<br>Islamic Primary and High School. This school shares a<br>border with Norfolk Village and Woolworths Market Place,<br>a recently expanded shopping mall. Also on waterloo Rd is<br>the main shopping strip for Greenacre. It is a very busy<br>area with constant moving of traffic to the schools, the<br>shopping centres the houses as well as the main artery and<br>precinct for the whole of Greenacre's residents and visitors<br>alike.           | Noted.                                                                                                                                                                                                                                                                                               | 793               | DoP Submission no 147     |
| Land Use       | We have had in Strathfield, Homebush and Enfield areas a<br>huge increase in units, high rise etc and this has caused an<br>upsurge of traffic with poor road construction round abouts<br>slowing down particularly emergency traffic (Fire Brigade,<br>Ambulance) and buses have their worries too.                                                                                                                                                                                                                                                                          | Noted                                                                                                                                                                                                                                                                                                | 87                | DoP Submission no 102     |
| Land Use       | We question whether the ILC proposal, which seems to be<br>comprised of a large percentage of what amounts to<br>warehousing space, would be considered by the public as<br>either "critical infrastructure" or "major project".                                                                                                                                                                                                                                                                                                                                               | SEPP (Major Projects) applies to the proposed ILC in<br>that intermodal terminals are Major Projects and Part 3A<br>of the EP&A Act applies. Statutory planning is detailed in<br>Chapter 2.                                                                                                         | 30                | DoP Submission no 93      |
| Land Use       | Necessity rather than choice has resulted in the<br>encroachment of residential areas around the former<br>marshalling yards and its neighbouring light industrial zone<br>Indeed when the Marshalling Yards were built at Enfield,<br>the area was mostly empty fields. Even in the 1950's there<br>was more vacant land in the vicinity of the marshalling<br>yards than anything else.                                                                                                                                                                                      | The population of Sydney has steadily increased as such so has the demand for housing and associated infrastructure.                                                                                                                                                                                 | 736               | DoP Submission no 129,130 |
|                | As rents and other costs increase ,business owners may<br>be forced to move to other locations. Furthermore<br>landowners are increasingly enticed by the profits to be<br>made in rezoning industrial and commercial land to<br>residential land. This will mean that an intermodal at Enfield<br>will no longer be conveniently located to many commercial<br>an industrial sites. There are many examples of<br>commercial and or industrial enterprises which have over<br>the years decentralised to what was once Sydney's<br>hinterland and we need not list them here. | Land use is controlled through Council's Local<br>Environmental Plans which dictates the nature of<br>development permissible within certain areas. The<br>industrial lands in Sydney's inner and middle western<br>areas are unlikely to be rezoned. Further details are<br>provided in Chapter 14. |                   |                           |

| Land Use       | The site is completely unsuitable for such facility given its proximity to residential areas and the adverse community and environmental impacts the redevelopment would create                                                                                                                                                                                                                                                                                                                                                                 | Land use immediately surrounding the site is<br>predominantly industrial. Further details are provided in<br>Chapter 14.Community and environmental impacts<br>were fully assessed in the EA. Mitigation measures<br>identified will be further developed during detailed<br>design. Mitigation and management measures would be<br>implemented through Environmental Management<br>Plans for the construction and operation phases.                                                                                                                                  | 107               | DoP Submission no 68    |
| Land Use       | There is a high density of residential populations in the areas surrounding the marshalling yards                                                                                                                                                                                                                                                                                                                                                                                                                                               | Land use immediately surrounding the site is<br>predominantly industrial. Further details are provided in<br>Chapter 14.                                                                                                                                                                                                                                                                                                                                                                                                                                              | 671               | DoP Submission no 76    |
| Land Use       | With all the internal roads, administrative buildings, diesel<br>and LPG storage and fuelling, container wash down area,<br>vehicle maintenance shed and installation site services<br>including all utilities, a community and ecological area (for<br>fresh pollution) a light industrial/commercial area, rail<br>sidings, railway lines and warehousing for the packing and<br>unpacking of containers and short term storage cargo,<br>where and how are the 300,000 shipping container units<br>and II the empty containers going to fit? | The layout for the site is shown in Chapter 4 of the EA.<br>Detailed design for storage locations for the shipping<br>containers will provide more detail. Figure 4-2a in<br>Chapter 4 shows the area allocated to intermodal<br>activities and empty container storage.                                                                                                                                                                                                                                                                                              | 649               | DoP Submission no 65    |
| Land Use       | We in the Norfolk Village and surrounding streets already<br>have to contend with both the Boral Concrete Batching<br>Plant and the Boral Asphalt Plant which are located on<br>Roberts Rd Greenacre across the road from the Norfolk<br>Village and surrounding streets. Also the Finemores<br>trucking company which is also located on Roberts Rd.                                                                                                                                                                                           | Noted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 630               | DoP Submission no 39,98 |
| Land Use       | In terms of land use the assessment claims that" benefits<br>would arise through rehabilitation of the southern end of the<br>site through the possible reuse of the Tarpaulin factory<br>building and creation of the Community & Ecological area".<br>Isn't this the exact same area where huge ugly noise walls<br>would be erected? How is this defined as rehabilitation?                                                                                                                                                                  | Noise barriers to be installed in this part of the site would<br>generally be landscaped. Further details are provided in<br>Chapters 11 and 16. The Community and Ecological<br>area is to be rehabilitated through removal of noxious<br>and invasive species. The final design and use of both<br>the Tarpaulin Shed and the Community and Ecological<br>area, would be developed in consultation with Council<br>and the community, but would include landscaping and<br>planting to encourage native wildlife and provide<br>passive recreational opportunities. | 842               | DoP Submission no 325   |
| Land Use       | I would like to see the area developed for a community use<br>and left as open space. We in Canterbury and nearby<br>councils are running out of open space and I strongly object<br>to losing this open space to the port.                                                                                                                                                                                                                                                                                                                     | The final design and use of both the Tarpaulin Shed and<br>the Community and Ecological area and future use<br>would be developed in consultation with Council and the<br>community                                                                                                                                                                                                                                                                                                                                                                                   | 588               | DoP Submission no 7     |

| Management     | If the Department decides to approve the project we<br>request as a minimum the following:<br>Site management monitoring, noise limits to protect local<br>residents and businesses, air quality, traffic levels and<br>noise monitoring. | Construction and Operation Environmental<br>Management Plans are to be prepared to cover issues<br>including noise, air quality and traffic. These will provide<br>details on monitoring. Noise levels to be met are defined<br>in the noise study and the proposal will aim to comply<br>with these.<br>SPC will also ensure that it engages with the local<br>community in both construction and operational phases<br>using community focussed working groups. In this<br>regard, SPC has already established to Traffic Working<br>Group which has met 5 times. | 686         | DoP Submission no 73 |

| Noise          | Already the noise level is very high.<br>We are already fully congested with noise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 646               | DoP Submission no 62    |
| Noise          | It would appear that the centre will generate operations<br>involving one train every seven minutes seven days a<br>week. The trains quite obviously are large trains with a<br>significant number of carriages of sorts. Each train as it<br>moves past any designated point literally takes a couple of<br>minutes to pass and in doing so creates a regular and<br>continuous noise. Following its departure it is then only 5<br>minutes before this process is once again repeated.<br>The noise of regular gear changes and air brakes only adds<br>to the noise pollution from the almost ceaseless clanging of<br>train wheels on the tracks.                                                                                            | Noted.<br>The train movements entering and leaving the site will<br>be no more 20 per day.<br>The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor.                                                                                                                                                                                                                                 | 626               | DoP Submission no 36    |
| Noise          | I object on the basis of:<br>the noise factor that will be suffered by the affected<br>residents when the monstrous structure, and bridge from<br>Cosgrove Road Enfield to Wentworth St Greenacre is<br>being built<br>The noise that will affect residents with the enormous<br>amount of extra truck movements along Roberts Road<br>each day if the proposal goes ahead.<br>The fact that the railway tracks leading into the Enfield site<br>were built around 1905 and originally designed to carry<br>steam trains. Diesel trains began operation some 20 years<br>later. The weight distribution of today's trains is a major<br>noise issue. Current trains stop on the hills and restart thus<br>causing the appalling screeching noise | Noise effects from site operations will be managed to an acceptable level. Noise issues would be addressed in more detail through the Environmental Noise Management Plan and in detailed design stage. Traffic noise was addressed in Chapter 11. The traffic generated by the ILC will not cause any significant increase in traffic noise. Noted. The appropriate approach to the management of effects from the rail freight line is one that includes all relevant Government agencies, including DEC, RailCorp and ARTC. SPC will with these other agencies and relevant Councils to consider ways of managing impacts associated with rail operations in the dedicated freight rail corridor. | 630               | DoP Submission no 39,98 |
| Noise          | The building of the ILC is substantial and will result in a large increase in semi trailer truck movements in the Enfield area. Since the Enfield and surrounding areas are predominantly residential, this will result in a number of detrimental effects including, noise pollution                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Traffic noise was addressed in EA Report Chapter 11.<br>The traffic generated by the ILC will not cause any<br>significant increase in traffic noise. Traffic in residential<br>areas would be managed through a Local Area Traffic<br>Management Plan to be prepared during detailed<br>design.                                                                                                                                                                                                                                                                                                                                                                                                     | 631               | DoP Submission no 42    |
| Noise          | Trains trucks, brakes. Trucks gear change pulling up hill,<br>movement of containers, cranes and the positioning of<br>containers on their steel pegs.<br>Noise barrier made of trees and soil mound if what is<br>described in the diagram this is an area that will attract<br>undesirables to prey on others to bash and rape within the<br>thick undergrowth (this area is becoming prevalent to this<br>type of behaviour)                                                                                                                                                                                                                                                                                                                  | Noted.<br>Design of noise mounds and associated landscaping<br>would take into consideration the potential for<br>undesirable and antisocial behaviour, and be managed<br>to minimise opportunities for graffiti etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 512               | DoP Submission no 45    |
| Noise          | Already the noise level is very high.<br>We are already fully congested with noise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 633               | DoP Submission no 46    |

| Noise          | I object to the proposal to build a port at Enfield because of noise                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                              | 583         | DoP Submission no 1  |
| Noise          | Already the noise level is very high.<br>We are already fully congested with noise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                              | 642         | DoP Submission no 62 |
| Noise          | The noise level (on Roberts Rd) has increased dramatically<br>and continues throughout both day and night. Our windows<br>have not been double glazed and at times it is practically<br>impossible to hear either TV or Radio without an increase<br>in the sound level.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Noted. Traffic noise was addressed in EA Report<br>Chapter 11. The traffic generated by the ILC will not<br>cause any significant increase in traffic noise.                                                                                                                                                                                                                                                                                        | 623         | DoP Submission no 32 |
| Noise          | sound barriers will not stop the cacophony from the<br>proposed centre and train lines floating down to the<br>picturesque Bay-to-Bay walk and cycle track, the<br>Strathfield Golf course and the million dollar homes in the<br>area                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Acoustic barriers and landscaping proposed for the site<br>is to be developed further during detailed design.<br>Noise effects from site operations will be managed to an<br>acceptable level.                                                                                                                                                                                                                                                      | 671         | DoP Submission no 76 |
| Noise          | My husband and I purchased our home on Punchbowl Rd,<br>Belfield, 3 years ago and found that the noise and pollution<br>is already terribly distressing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                              | 681         | DoP Submission no 94 |
| Noise          | These operations will result in increased noise                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Noise issues are considered in EA Report Chapter 11<br>and Appendix E.                                                                                                                                                                                                                                                                                                                                                                              | 686         | DoP Submission no 73 |
| Noise          | Within the EA there is no mention of provisions to guard<br>against the huge increase in noise pollution and vibration<br>that will directly affect myself and other residents living near<br>the freight line in Marrickville. The provision of noise<br>barriers etc along residential areas appears to be a<br>reasonable minimum requirement should your project go<br>ahead, regardless of tax payers dissent.<br>I therefore request that Sydney Ports conduct a more<br>detailed study outlining their strategies for minimising the<br>noise associated with this project and the expansion of Port<br>Botany, in regards to the entirety of the line not just at Port<br>Botany and Enfield as contained in this assessment. | The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor.                                                                              | 563         | DoP Submission no 95 |
| Noise          | We are already subject to a lot of noise.<br>Imagine a very hot night where we have to close our<br>windows and take the heat instead of the noise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                              | 706         | DoP Submission no 77 |
| Noise          | We believe that if the construction of the terminal is to go<br>ahead, it would cause and increase in noise.<br>Living only one street away from the proposed terminal we<br>would be exposed to the increased noise involved in freight<br>being moved along the existing rail line from Port Botany to<br>the terminal.                                                                                                                                                                                                                                                                                                                                                                                                             | Noise issues from the site are addressed in Chapter 11<br>and Appendix E.<br>The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor. | 711         | DoP Submission no 69 |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | ID          |                      |
| Noise          | I am a local resident of Belfield and am gravely concerned<br>about the noise levels that we are currently experiencing -<br>let alone once and if this proposal goes ahead.<br>The screeching of brakes that can last for serval minutes<br>and the loud chugging of the diesel engines is extremely<br>unfair to all residents and this is happening 24 hours a day<br>7 days a week.<br>I have read the Sydney ports web site and they claim that<br>there will be noise barriers installed. My question is will<br>these barriers be installed along the entire railway line and<br>not just at the marshalling yards?                                                                                                                                            | Noted. The appropriate approach to the management of<br>effects from the rail freight line is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will be happy to work with<br>these other agencies and relevant Councils to consider<br>ways of managing impacts associated with rail<br>operations in the dedicated freight rail corridor.<br>The noise barriers proposed by SPC are intended to<br>address noise from on site operations of the ILC. | 638         | DoP Submission no 61 |
| Noise          | The freight terminal will concentrate truck numbers and<br>movements in our local community resulting in more noise.<br>The increase in noise is unacceptable                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Noted. Traffic noise was addressed in Chapter 11. The traffic generated by the ILC will not cause any significant increase in traffic noise. Traffic would be controlled through a Local Area Traffic Management Plan. This would be prepared with due consideration of potential impacts on residences in the area.                                                                                                                                                                                 | 596         | DoP Submission no 19 |
| Noise          | There is already too much noise in and around the<br>proposed area, and leeching into the area where I reside. I<br>am also in the Enfield flight path from Sydney Airport as<br>well as the Enfield marshalling Yards have been a bone of<br>contention for may years for the noise churned out late at<br>night interfering with sleep. The mind boggles at what it<br>could become with the installation of a container terminal<br>No thank you.                                                                                                                                                                                                                                                                                                                  | Noted. Noise effects from site operation will be<br>managed to an acceptable level. issues would be<br>addressed in more detail through the Environmental<br>Noise Management Plan.<br>The noise barriers proposed by SPC are intended to<br>address noise from on site operations of the ILC.                                                                                                                                                                                                       | 585         | DoP Submission no 3  |
| Noise          | Future development will bring extra noise.<br>From accounts made public the railway will be a 24 hour 7<br>days a week concern which will lead to a much greater<br>noise level from engines and shunting rail traffic.<br>Noise problems will also be a problem for the surrounding<br>area especially on still summer nights or nights with low<br>cloud and humidity. No matter how hard the people working<br>in the ILC try, noise will not be kept to a minimum. When<br>the jeep assembly factory was operating in Cosgrove Rd<br>many years ago, people living in this area were able to hear<br>the assembly working even though the factory stopped<br>early in the night. How much more noise will be heard from<br>a large area of land with no barriers. | Noise effects from site operation will be managed to an<br>acceptable level. Issues would be addressed in more<br>detail through the Environmental Noise Management<br>Plan.<br>The noise barriers proposed by SPC are intended to<br>address noise from on site operations of the ILC.                                                                                                                                                                                                              | 587         | DoP Submission no 5  |
| Noiso          | cause noise pollution in an area mainly residential.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Noice offects from site operation will be managed to an                                                                                                                                                                                                                                                                                                                                                                                                                                              | 400         | Dop Submission no 10 |
| INDISE         | been pledges from the Enfield Ports that they can handle<br>this. In truth this will be impossible to maintain.<br>My objection is to the noise along the track that seems to<br>be overlooked. I live in the section where Paxton Ave runs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | acceptable level. issues would be addressed in more<br>detail through the Environmental Noise Management<br>Plan. The noise barriers proposed by SPC are intended<br>to address noise from on site operations of the ILC.                                                                                                                                                                                                                                                                            | 499         |                      |

|                | The curfew is on for planes- these thundering monsters<br>(trains) on the night take longer to pass than planes. At<br>night I never open windows and haven't an air conditioner.<br>The noise just accelerates                                                                                         | ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor                                                                                                                                                                                     |             |                                            |
| Noise          | Concern about increase in noise.<br>We do not want our residential suburb to become a<br>commercial port. Imagine the increase in frequency of<br>goods train and hundreds of trucks on the local roads. We<br>do not want our children to grow and suffer in such a noisy<br>and polluted environment. | Noted. See above.                                                                                                                                                                                                                                                                                                                                                            | 588         | DoP Submission no 7                        |
| Noise          | Project will create noise pollution                                                                                                                                                                                                                                                                     | Noted. See above                                                                                                                                                                                                                                                                                                                                                             | 589         | Allegretti, Ms Anna<br>DoP Submission no 9 |
| Noise          | The increased number of trucks travelling to and from the logistics centre on our roads also means they will create more noise.                                                                                                                                                                         | Noted. Traffic noise was addressed in Chapter 11. The traffic generated by the ILC will not cause any significant increase in traffic noise. Traffic would be controlled through a Local Area Traffic Management Plan. This would be prepared with due consideration of potential impacts on residences in the area.                                                         | 591         | DoP Submission no 14                       |
| Noise          | I feel that some form of sound insulation, screening,<br>alterations and discussion should be proposed with me<br>before approval as my house is in the firing line.                                                                                                                                    | Further consideration of appropriate noise mitigation measures will be undertaken at the design and develop stage.                                                                                                                                                                                                                                                           | 539         | DoP Submission no 35                       |
| Noise          | The proposal will lead to more noise- noise which is very high now                                                                                                                                                                                                                                      | Noted. See comments above                                                                                                                                                                                                                                                                                                                                                    | 593         | DoP Submission no 16                       |
| Noise          | Our thoughts are about the noise. And the noise from the very long trucks.                                                                                                                                                                                                                              | Noted. See comments above                                                                                                                                                                                                                                                                                                                                                    | 625         | DoP Submission no 33                       |
| Noise          | The Minister for Planning should look very carefully at<br>determining the speed at which these goods trains should<br>travel, to reduce the noise to homes level with or below the<br>level of the rail line.                                                                                          | Noted. The appropriate approach to the management of<br>effects from the rail freight line is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor | 597         | DoP Submission no 21                       |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Response                                                                                                                                                                                                                                                                                                                          | Stakeholder<br>ID | Name                                               |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|----------------------------------------------------|
| Noise          | The main issue we have is with the plant operating on the site, namely the container fork lifts and their reversing alarms.<br>The noise impact report states that the noise level from container forks will be 120DB (A) and reversing alarms 107 dB(A) (p11.13). One wonders , why bother having reversing alarms that are not as loud as the plant/ Will Work cover require extra loud alarms at a later date?. The reason that we are concerned about the noise impacts is because of the figures shown above and the fact that the report states that noise levels exceed the NSW Sleep Arousal Criteria. | Noise during construction and operation would be<br>managed through an Environmental Noise Management<br>Plan. This would include consideration of mobile plant<br>used on site including options for reducing impacts from<br>reversing alarms.<br>The noise of the plant will not reduce the effect of the<br>reversing alarms. | 599               | DoP Submission no 23                               |
|                | The report uses term like " May not actually occur in<br>practise" and " They are not considered loud enough to<br>cause an impact on surrounding residents' (P11.13). These<br>terms are used to soften the impact. The fact is the noise<br>levels will be enough to cause an impact on residents. This<br>is shown clearly in the report.<br>The locations that the noise readings were taken give us<br>some concern as well. The locations are subject to traffic<br>noise at night (Hume Hwy and Cosgrove Rd). In guiet                                                                                  | Noise effects from site operation will be managed to an acceptable level. issues would be addressed in more detail through the Environmental Noise Management Plan. The noise barriers proposed by SPC are intended to address noise from on site operations of the ILC.                                                          |                   |                                                    |
|                | areas the reversing alarms will be very intrusive. The noise<br>barriers will reduce plant noise, but reversing alarms need<br>to be intrusive by nature and we feel that our tranquility<br>sleep will be compromised                                                                                                                                                                                                                                                                                                                                                                                         | noise generation from the site and were considered in<br>the conclusion that<br>noise effects from site operation will be managed to an<br>acceptable level                                                                                                                                                                       |                   |                                                    |
| Noise          | We have too much noise already from heavy vehicles using<br>their engine brakes unnecessary, coming down Liverpool<br>Rd to turn into Cosgrove Rd at night and early hours of the<br>morning to go to the TNT courier delivery base. We have to<br>keep our front windows and door closed to help stop the<br>noise. Engine or exhaust brakes should be banned from<br>use in Metropolitan area and country towns.                                                                                                                                                                                             | Noted.                                                                                                                                                                                                                                                                                                                            | 93                | Palmer, Mrs Bev<br>DoP Submission no 25            |
| Noise          | Already the noise level is very high.<br>We are already fully congested with noise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Noted.                                                                                                                                                                                                                                                                                                                            | 620               | Schomberg, Mrs Rosanna<br>DoP Submission no 27,306 |
| Noise          | Roberts Rd is an "EXPRESS" not a road for more trucks<br>that fly past the homes creating noise                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Noted.                                                                                                                                                                                                                                                                                                                            | 622               | Mitchell, Mr T<br>DoP Submission no 31,100         |

| Noise          | As I live near the intersection of Juno Pde and Roberts Rd,<br>the noise of brakes and acceleration of trucks is already<br>affecting my health as the noise wakes me up all the time.<br>In the event of the terminal opening there will be 24 hour<br>noise unloading, loading shunting and train engine noise.<br>Adding to that the noise and pollution from 24 hour trucks<br>entering and departing the terminal using Roberts Rd as its<br>main access point.<br>I note there are no noise barriers on the Roberts rd<br>direction. We need noise barriers along Roberts Rd or high<br>brick fences to buffer the noise. | Noted. Noise effects from site operation will be<br>managed to an acceptable level .Issues would be<br>addressed in more detail through the Environmental<br>Noise Management Plan.<br>The noise barriers proposed by SPC are intended to<br>address noise from on site operations of the ILC.                                                                                                        | 571         | Hobbs, Mrs Thelma<br>DoP Submission no 13,154,170         |
| Noise          | The railway line in Bruce Ave Belfield will be used a lot<br>more than at present and the extra noise to Belfield<br>residents will be extreme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Noted. The appropriate approach to the management of<br>effects from the rail freight line is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will be happy to work with<br>these other agencies and relevant Councils to consider<br>ways of managing impacts associated with rail<br>operations in the dedicated freight rail corridor              | 592         | Bryant, D.M.<br>DoP Submission no 15                      |
| Noise          | The proposal will result in increased noise                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Noise issues are discussed in Chapter 11.                                                                                                                                                                                                                                                                                                                                                             | 45          | Bezzina, Mr J<br>DoP Submission no 179                    |
| Noise          | understand that Bankstown Council also objects to this<br>proposal and agrees that Boronia Rd should also be<br>treated as a residential road and would not be suitable as a<br>State road fro trucks due to the high number of residents<br>residing on Boronia Rd, the surface not being suitable for<br>heavy trucks, lack of noise barriers. Located along Boronia<br>Rd are Banksia Public School, Greenacre Scout Hall and<br>an aged care facility. The additional noise would impact on<br>elderly and the youth of the community                                                                                       | Noted. Traffic noise was addressed in Chapter 11. The traffic generated by the ILC will not cause any significant increase in traffic noise. Traffic would be controlled through a Local Area Traffic Management Plan. This would be prepared with due consideration of potential impacts on residences in the area.                                                                                  | 726         | Gordon, Ms Christine<br>DoP Submission no 12,172,178      |
| Noise          | If you stand in my backyard, you will see that already the<br>noise level is high, if as per your report you make more<br>lanes and use Cosgrove Road/Hume Highway exit, it will<br>be impossible to even live inside the house (well, maybe by<br>getting holed up inside with all the doors and windows<br>closed and the house severely insulated!<br>You can't even imagine how much noise, dust, vibration.                                                                                                                                                                                                                | Noted.<br>Environmental management measures would be                                                                                                                                                                                                                                                                                                                                                  | 542         | Goyal, Mr & Mrs Sanjeev & Sarika<br>DoP Submission no 122 |
|                | pollution will be experienced by us.<br>Even before the actual functioning starts, there will be so<br>much construction traffic that our life would be made hell.<br>When a truck turns from Cosgrove Road into Hume<br>Highway, even if it is not fully laden, and moves towards<br>Roberts Road, which is slightly uphill, it goes in first gear<br>and right behind my buse changes to second acer. Makes                                                                                                                                                                                                                   | implemented for construction and operation to minimise<br>and manage noise, air quality and vibration impacts.<br>Further details are provided in Chapter 21.<br>Noted. Traffic noise was addressed in Chapter 11. The<br>traffic generated by the ILC will not cause any significant<br>increase in traffic noise. Traffic would be controlled<br>through a Local Area Traffic Management Plan. This |             |                                                           |

|                | so much noise. Similarly when a truck is approaching the turning at Cosgrove Road, it starts to apply brakes and changes gears to low, there is huge rattling and breaking noise and all the windows in my house shake. This Port Enfield which will be operating 24/7, will eventually lead to movement all the time. Mr Barney, I have Civil Construction background and have worked on the Parramatta Rail Link project.                                                                                                                                                                                                                                                                                                                          | would be prepared with due consideration of potential impacts on residences in the area.                                                                                                                                                                                                                                                                                                                                                                                                     |             |                                              |
|                | I can imagine how much noise, vibration, pollution, dust would be generated by this. Its simply not a viable idea.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | See comment above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |             |                                              |
|                | No, this won't do. All the residents on Cave Road are<br>already suffering from extreme noise. They have been<br>living here for the last 25 or more years. Nobody had<br>predicted that there would be an increase of so much<br>traffic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |                                              |
| Noise          | Further, within the Environmental Assessment itself, there<br>is no mention of provisions to guard against the huge<br>increase in noise pollution and vibration that will directly<br>affect myself and other residents living near the freight line<br>in' Marrickville. The provision of noise walls, or sound<br>barriers etc along residential areas appears to be a<br>reasonable minimum requirement should your project go<br>ahead, regardless of tax payers dissent.<br>At present the freight trains travelling along the route are<br>often extremely noisy. I cannot conduct a conversation with<br>a person in the same room let alone hear a radio or a TV.<br>This needs addressing to improve the quality of life for<br>residents. | Noted. The appropriate approach to the management of<br>effects from the rail freight line is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor                                                                                                                 | 807         | Podmore, Mr Richard<br>DoP Submission no 156 |
| Noise          | Since the Enfield and surrounding areas are predominantly<br>residential, this will result in a number of detrimental effects<br>including, noise pollution, air pollution and a risk to local<br>pedestrians.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Noise and air quality would be addressed within<br>Operation Environmental Management Plans to be<br>prepared for the site. Pedestrian safety will be a key<br>consideration during preparation of the Local Area<br>Traffic Management Plan.                                                                                                                                                                                                                                                | 809         | Sciglitano, Mrs D<br>DoP Submission no 123   |
| Noise          | The development could cause many hazardous implications such as: increased noise pollution, movements of heavy rail freight                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Noise and air quality would be addressed within<br>Operation Environmental Management Plans to be<br>prepared for the site.<br>The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail. | 810         | Mortier, D&M<br>DoP Submission no 168        |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Stakeholder | Name                                                                              |

| Noise          | Noise pollution, air pollution and traffic congestion will<br>increase and a whole of Sydney will be affected, including<br>suburbs in the Bankstown Local Government Area where I<br>live.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Noise and air quality would be addressed within<br>Operation Environmental Management Plans to be<br>prepared for the site. Traffic congestion will be a key<br>consideration in the Local Area Traffic Management<br>Plan.                                                                                                                                                                                                                                                                                                                     | 811         | Makin, Mr Stephen<br>DoP Submission no 125                                        |
| Noise          | Further, within the Environmental Assessment itself, there<br>is no mention of provisions to guard against the huge<br>increase in noise, pollution and vibration that will directly<br>affect myself and other residents living near the freight line<br>in Marrickville. The provision of noise walls, or sound<br>barriers etc along residential areas appears to be a<br>reasonable minimum requirement should your project go<br>ahead regardless of tax payers' dissent                                                                                                                                                                                                                                                                      | Noted. The appropriate approach to the management of<br>effects from the rail freight line is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor.                                                                                                                                                                   | 805         | Macgregor, Mr Colin<br>DoP Submission no 124                                      |
|                | There should also be consideration given to the introduction of electrification of the line between Port Botany and Enfield. The gantries for power lines already exist as far east as Sydenham on this line and the investment in electric locomotives would be a major step forward in the reduction of pollution and noise in this area."                                                                                                                                                                                                                                                                                                                                                                                                       | There is no proposal by the State Government to electrify the line.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |             |                                                                                   |
|                | As you may or may not be aware, the level of noise from<br>living in close proximity to a freight line can be considerably<br>worse than that experienced from a major road or a flight<br>path. The causes of this are the high pitched squealing<br>during braking, shunting of wagons against each other<br>during changes of speed, the noise from up to four<br>locomotives pulling 30 fully laden wagons up an incline and<br>the wheel noise from poorly maintained rolling stock. Living<br>under a flight path, as I do, I can assure you that the freight<br>line has a much greater impact than aircraft on my life and<br>those of my neighbours as it continues 24 hours a day.                                                       | Noted. See comment in para 1 above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |             |                                                                                   |
| Noise          | One of the highest concerns regarding this proposed development is noise, particularly from rail and traffic, particularly to nearby residential areas. As discussed, the Society is concerned about the viability of the Enfield Industrial area due to the impact of heavy vehicle traffic. The ILC proposal states that 'Commercial and light industrial activity at the southeast of the site on Cosgrove Rd will act as a buffer for residents'. If the Enfield industrial area becomes less viable for a range of businesses, the likely occupiers of land will be business associated with the ILC eg trucking companies. It is possible that the ILC or similar operations may explore future expansion on the southeast of Cosgrove Road. | Noted. Noise effects from site operation will be<br>managed to an acceptable level. issues would be<br>addressed in more detail through the Environmental<br>Noise Management Plan. Acoustic barriers are also<br>proposed to minimise impacts from site operations on<br>sensitive receivers. Further details are provided in<br>Chapters 11 and 16. The noise barriers proposed by<br>SPC are intended to address noise from on site<br>operations of the ILC.<br>The ILC will be confined to the site for which approval is<br>being sought. | 31          | Jones, Ms Cathy<br>Strathfield Historical Society<br><b>DoP Submission no 136</b> |
| Noise          | We also do not need more noise as we have enough through South Strathfield Primary School                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 804         | Brandt, Mrs M. | Noise          | With respect to noise, many sensitive areas and some of<br>them apparently distant from the site but still relevant were<br>excluded from consideration in measurement and the<br>effects of adverse metereological conditions downplayed.<br>The disbenefits of 24/7 operation, a distinct reversal of<br>established policy and practice for industrial developments<br>adjacent to residential areas was not even canvassed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Meteorological conditions were considered in the noise<br>impact assessment.<br>The area and its surrounds are zoned appropriately for<br>the existing and intended use.                                                                                                                                                                                               | 817 B       | Gewandt, Ms Elizabeth<br>Councillor Strathfield Council<br>DoP Submission no 120,181 |
|                | <b>Traffic estimates are questionable</b><br>Although the EA suggests that additional noise impacts will be minimal with the presence of the intermodal terminal, the evidence presented is contestable. The approach adopted by the EA is that there are existing or emerging noise pollutants, but few actually arising from the terminal. The EA deliberately excludes consideration of existing or proposed additional rail movements as a result of Port Botany expansion and their resultant impacts as well as excluding from assessment sites which might give unfavourable readings for actual and potential noise and a discounting of the very real problems associated with unique meteorological conditions in and around the site which amplify sound. However, the EA admits to noise exceedences in unfavourable weather conditions for up to 20% of the time pours (n28n2)                                                                                                           | The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor  |             |                                                                                      |
|                | It may be illuminating that when the former Telstra site was<br>developed in the early 1990's the acoustic studies<br>accompanying the application indicated extreme levels of<br>noise exceedence for residences along Roberts Rd. As a<br>consequence conditions of consent by Strathfield Council<br>included double glazing to several properties                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Appropriate mitigation measures will be developed at<br>the detailed design stage to ensure compliance under<br>those conditions.                                                                                                                                                                                                                                      |             |                                                                                      |
|                | <b>Rail noise</b><br>Noise from rail is related to not only movements or<br>numbers of trains but to the condition of the track, the<br>degree of maintenance carried out on locomotives and<br>rolling stock, the presence or absence of noise mitigation<br>barriers and lastly the meteorological conditions prevalent<br>which tend to amplify sound. All of these factors are<br>currently negatively impacting on residents living in<br>proximity to the site and rail line. The EA indicates that<br>approximately 135 train movements per day will result from<br>the Port Botany expansion. That is an increase from the<br>current 28 per day or a staggering 235% increase. Of these<br>135, 20 will stop at Enfield. It is not credible that both<br>cumulative noise and locomotive diesel particles will not<br>impact on local residents. If this is not a concern of Sydney<br>Ports then it surely is the concern of the State Government<br>that approved Port Botany's expansion. | The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor. |             |                                                                                      |
|                | As with rail noise, Truck noise is related to movements but                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                        |             |                                                                                      |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                              | ID          |      |
|                | also to the location of the site in an "inversion" zone which<br>under certain prevailing wind conditions amplifies sounds.<br>The EA indicates that the road network is at or reaching<br>capacity. Clearly this means that volumes are greater than<br>the road system can handle and with this must surely be<br>related noise pollution effects with respect to braking,<br>queuing, idling etc. Any increase in movements has the<br>potential to increase noise nuisance, particularly given the<br>intention to operate 24/7 within an unfavourable<br>meteorological zone. However, No consideration has been<br>given to acoustic treatments beyond the site such as could<br>be argued are required along the Liverpool Rd residential<br>precinct and on Centenary Drive at Strathfield Golf Course.<br>Again, if these are not issues for Sydney Ports, they are<br>surely issues for State Government and/or RTA. | Cumulative noise impacts have been considered to the<br>extent that NSW noise policy allows, through the<br>application of the amenity criteria. It is noted that in<br>NSW road, rail and industrial noise are assessed to their<br>own separate criteria, as different types of noise are<br>perceived differently in the community. There are<br>currently no overall criteria that address total<br>environmental noise. |             |      |
|                | The EA contends that dominant noise sources will come<br>from idling of trains and plant operating in the<br>loading/unloading area. This may well be so. However,<br>experience with the site suggests the main sources of<br>current noise are screeching of wheels on the rail line on<br>certain gradients and with certain loads. If train numbers<br>are to increase as predicted to 135 per day, this problem<br>will grow. Remedy can only come from further regulation<br>and inspection of locos and rolling stock and line<br>maintenance and/or renewal.                                                                                                                                                                                                                                                                                                                                                           | The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor                                                        |             |      |
|                | Regulation and enforcement of all Noise sources along all<br>rail and road corridors from port to market - adherence to<br>EPA and other standards Resourcing of noise barriers<br>along rail freight corridors where standards are exceeded<br>Resourcing of noise mitigation measures along freight<br>corridors/main arterial roads where standards are<br>exceeded.<br>Continual monitoring and resourcing/facilitation of                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | See above comments<br>SPC has no control over the age and type of<br>locomotives which use the goods line.                                                                                                                                                                                                                                                                                                                   |             |      |

| Noise          | Noise suggestion maximum noise abatement measures<br>should be implemented to ensure that there is minimum<br>impact onto the neighbouring residential areas. This is<br>particularly relevant in the still of the evening and night<br>where noise tends to carry a lot further than during the day.<br>Earth mound hills, sound walls and barriers, tree planting<br>and any other practical measures should be integrated into<br>the development. This is something that is very important<br>given the hours of operation. It should also assist in<br>reflected night light. | Management of noise impacts including design of<br>acoustic mounds, landscape planting and other noise<br>mitigation measures are to be determined during<br>detailed design and managed through the<br>Environmental Noise Management Plan.                                                                                                                                                                                                                                                                                          | 823         | McGhee, Mr James<br>DoP Submission no 99                                        |
| Noise          | People will be forced to move away from the rail noise                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor                                                                                                                                                                 | 828         | Austin, Mr Paul<br>DoP Submission no 182                                        |
| Noise          | The traffic has caused and continues to cause excessive<br>noise leading to discomfort and a poorer quality of life for<br>residents. The noise of traffic particularly speeding trucks<br>has meant that we are forced to bring down the block of<br>shutter in the early afternoon so that we are able to block<br>out at least part of the noise form traffic and thus blocking<br>out the natural light.                                                                                                                                                                       | Noted. Traffic noise was addressed in EA report<br>Chapter 11. The traffic generated by the ILC will not<br>cause any significant increase in traffic noise. Traffic<br>would be controlled through a Local Area Traffic<br>Management Plan. This would be prepared with due<br>consideration of potential impacts on residences in the<br>area.                                                                                                                                                                                      | 829         | Homaidan, Mr Ilham<br>DoP Submission no 245                                     |
| Noise          | Further, within the Environmental Assessment itself, there<br>is no mention of provisions to guard against the huge<br>increase in noise, pollution and vibration that will directly<br>affect myself and other residents living near the freight line<br>in Marrickville. The provision of noise walls or sound<br>barriers etc along residential areas appears to be a<br>reasonable minimum requirement should your project go<br>ahead regardless of tax payers' dissent.                                                                                                      | The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor                                                                                                                                                                 | 831         | Fay, Mrs M<br>DoP Submission no 316                                             |
| Noise          | We support the concept of constructing dedicated freight<br>lines across Sydney, but have grave concerns about the<br>likely disturbance to residents from a 24/7 operation.<br>We don't believe that noise walls in strategic locations<br>along the tracks will be effective in reducing noise impacts.<br>They certainly won't reduce vibration impacts.                                                                                                                                                                                                                        | Noise mitigation measures are to be further investigated<br>during detailed design and managed through the<br>Environmental Noise Management Plan.<br>The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor<br>Noted. | 447         | Jones, Ms Irene<br>South West Enviro Centre<br><b>DoP Submission no 315,158</b> |

| Noise          | I have studied the Environmental Impact Statement (EIS)<br>associated with the Intermodal Logistics Centre (ILC) at<br>Enfield and believe the issue of noise and traffic have not<br>been adequately addressed.<br>Most of the noise measurement sites are close to main<br>roads and may not be reflecting the true impact of the<br>development. The report fails to adequately cover the<br>subject of noise at night and the greater distance noise<br>travels at night. Noise Contour Maps cover only two case | Noted. The Environmental Assessment undertaken is<br>adequate and the issues of noise and traffic have been<br>appropriately addressed.<br>Noise measurement sites and methodologies comply<br>with requirements of the DEC Industrial Noise Policy,<br>and reflect noise levels at sensitive receivers.<br>Meteorological conditions and distance attenuation<br>effects were considered in the noise assessment, and | 569         | Roustas, Mr & Mrs Jim and Dorothy<br>DoP Submission no 131         |
|                | scenarios, it does not include maps in prevailing wind<br>condition or the distance noise travels at night, I suspect<br>these scenarios will have a greater impact on the<br>community compared to what is on public display.                                                                                                                                                                                                                                                                                       | the results are shown on the contour maps.                                                                                                                                                                                                                                                                                                                                                                             |             |                                                                    |
|                | Night-time activities should be restricted to essential<br>services only. Night time loading and unloading of trains<br>and trucks should be taking place in a fully enclosed sound<br>proof structure, (similar to TNT Enfield, Australia Post<br>Rookwood).                                                                                                                                                                                                                                                        | Noted. The ILC is to operate 24 hours a day 7 days a week. Appropriate noise mitigation measures would be implemented to minimise impacts to local residents.                                                                                                                                                                                                                                                          |             |                                                                    |
|                | Empty container movement and all other noisy activities<br>should be restricted to normal business hours<br>Consideration should be given to banning B-Doubles Semi<br>Trailers, especially at night.                                                                                                                                                                                                                                                                                                                | Noted. See comment above.                                                                                                                                                                                                                                                                                                                                                                                              |             |                                                                    |
| Noise          | Dramatic increases in the number of trucks (an extra 900 semi-trailers / day) going along our roads and rail to and around from the site as under the proposal will result in more traffic, more pollution, more noise, increased risk of road accidents and loss of property values.                                                                                                                                                                                                                                | Noted. Traffic noise was addressed in Chapter 11. The traffic generated by the ILC will not cause any significant increase in traffic noise. Traffic would be controlled through a Local Area Traffic Management Plan. This would be prepared with due consideration of potential impacts on residences in the area.                                                                                                   | 794         | Sinha, Nelly<br>DoP Submission no 117                              |
|                | Sydney Ports proposal would have severe impact on the<br>health of the residents as well as traffic flow within 10km<br>radius of the site causing traffic jam, noise, air and lighting<br>pollution for nearby residents                                                                                                                                                                                                                                                                                            | A series of noise mitigation measures are proposed on<br>site. Further details are provided in Chapter 11 and 16<br>and Appendices E and I. Amenity and property impacts<br>is discussed in Chapter 17. Traffic and safety would be<br>controlled through a Local Area Traffic Management<br>Plan, air quality through a dust management plan.                                                                         |             |                                                                    |
| Noise          | The EA has not considered the noise impact from<br>locomotives travelling to and from the Intermodal Logistics<br>Centre (ILC) at Enfield. This off-site impact cannot be<br>considered as a separate issue and requires a full<br>assessment so that the impacts and any required<br>mitigation measures can be established. The question is                                                                                                                                                                        | The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight                                                                   | 838         | Carney, Clr Bill<br>Mayor Strathfield<br>DoP Submission no 150,173 |

|                | asked at what stage will the impact of noise and local<br>pollution from increased rail movements resulting from the<br>FIAB report recommendations be assessed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | rail corridor                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | D           |                                                               |
| Noise          | We accept that a modal shift to freight rail is in principle a<br>sound concept, but in our view freight rail /noise and the air<br>quality impacts of dirty diesel locomotives are very real and<br>substantial issues that must be addressed and resolved<br>before such a shift occurs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Noted. These issues are addressed within Chapters 11<br>and 12 of the EA Report.<br>Environmental management measures are to be<br>implemented to minimise impacts, however, SPC has<br>no control over the age and type of locomotives which<br>use the goods line.<br>The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor | 30          | Maddocks, Ms Jenny<br>NoPE<br><b>DoP Submission no 93</b>     |
| Noise          | The building of the ILC is substantial and will result in a large increase in semi-trailer truck; movement in the Enfield area. Since the Enfield and surrounding areas are predominantly residential this will result in a number of detrimental effects including, noise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Traffic projections are provided in Chapter 7. A series of<br>mitigation measures are proposed as detailed in<br>Chapter 21.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 786         | Sciglitano, Mr & Mrs Joe and Theresa<br>DoP Submission no 106 |
| Noise          | We have to put up with the noise of freight trains all day and<br>all through the night.<br>There are two schools - Belmore North Primary and<br>Belmore North Boys High – also affected by the noise from<br>the freight trains and any further increase in rail traffic<br>would be unacceptable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Noted. The appropriate approach to the management of<br>effects from the rail freight line is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor                                                                                                                                                                                                                                                                  | 524         | Young, Ms Sandra<br><b>DoP Submission no 110</b>              |
| Noise          | There is no mention of provisions against the huge<br>increase in noise, pollution and vibration that will directly<br>affect all residents along the freight lines: The provision of<br>noise walls or sound barriers along residential areas should<br>appear as a reasonable minimum requirement if the project<br>were to go ahead regardless of tax-payers' dissent.<br>Investigations are needed for noise limits applicable to the<br>freight trains & carriages. Currently, some if not most<br>freight trains & carriages are inordinately noisy.<br>I humbly request that Sydney Ports urgently outline<br>strategies for minimising the noise associated with its<br>projects and the expansion of Port Botany, in respect of the<br>entirety of the freight-line, not just at Port Botany and | The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor<br>SPC has no control over the age and type of<br>locomotives which use the goods line.<br>Noted.                                                                                                                                                                       | 788         | Harris, Mr Tony<br>DoP Submission no 112                      |
| Noise          | Enfield as contained in the assessment presented so far.<br>The expansion of Port Botany has been estimated at                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | The ILC will assist in reducing the growth of truck                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 789         | Brooks, Mr Simon                                              |

| Noise          | We have already plenty of noise by South Strathfield public<br>school, situated between Homebush Road - Telopea Ave, -<br>Liverpool Road and High Street. Children are screaming<br>teachers are whistling, bells are ringing,                                                                                                                                                                                                                                                                                                                                                              | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 799         | von Oettingen-Brandt, Baroness M.L.<br>DoP Submission no 65             |
| Noise          | On my street, already the noise level is very high.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 800         | Siddiq and Hasan, Dr & Mrs Nadeem and<br>Nahid<br>DoP Submission no 146 |
| Noise          | The purpose of this submission is to object to the proposal.<br>Reasons for the objection of this proposal include:<br>Increase in more noise and pollution levels in the<br>community.                                                                                                                                                                                                                                                                                                                                                                                                     | Noted. Details in relation to potential noise impacts are<br>contained in Chapter 11 of the EA Report. Noise<br>mitigation measures are to be further developed during<br>detailed design and further measures implemented<br>through the Environmental Noise Management Plan.                                                                                                                                                                                                                                                                     | 803         | Nassar, Mr Mitri<br>DoP Submission no 153                               |
| Noise          | We believe the location of the proposed Centre is<br>extremely inappropriate. This is a major concern as we<br>know our Property's price value will dramatically decrease<br>due to increased traffic and noise.                                                                                                                                                                                                                                                                                                                                                                            | Noted. Property values over Sydney as a whole have<br>been increasing and given the limited impacts<br>associated with the proposal there are no reasons why<br>the proposal would affect local property prices. Further<br>details are provided in Chapter 17.                                                                                                                                                                                                                                                                                    | 792         | Abboud, Laura<br>DoP Submission no 116                                  |
| Noise          | The residents on Roberts Rd and surrounding streets<br>would have to endure the noise from thousands of big<br>semis 24 hours a day 7 days a week for ever                                                                                                                                                                                                                                                                                                                                                                                                                                  | Details in relation to potential noise impacts are<br>contained in Chapter 11 of the EA Report. Noise<br>mitigation measures are to be further developed during<br>detailed design and further measures implemented<br>through the Environmental Noise Management Plan and<br>Local Area Traffic Management Plan.                                                                                                                                                                                                                                  | 843         | Anonymous 3<br>DoP Submission no 167                                    |
| Noise          | Furthermore, the report states that noise mitigation devices<br>would be erected. Wow, I take it then that the noise barriers<br>will span the entire 1.3km site. You know perfectly well that<br>putting barriers in one section will do nothing to minimise<br>noise. Furthermore the proposed barriers are said to go up<br>at the south eastern side. Isn't this where the tarpaulin shed<br>is and the "green community area" is going/ Someone<br>please explain.                                                                                                                     | The location of proposed acoustic barriers is provided in<br>Chapter 11 and 16 to be further developed during<br>detailed design.<br>No operations are proposed within the Community and<br>Ecological area. SPC would consult further with the<br>community about the future uses of the community and<br>ecological area and the tarpaulin factory. Noise<br>mounding is proposed to the north of the Tarpaulin shed<br>as show in Figure 8 of Appendix I behind the existing<br>light industrial/commercial development along Cosgrove<br>Road. | 841         | Georgy, Mr Elias<br>DoP Submission no 323                               |
| Noise          | There will be an unacceptable increase in peak and<br>ambient noise levels. Note from the EA document that:<br>'operational noise emission from the site may exceed the<br>NSW DEC noise criteria without appropriate mitigative<br>measures . Dominant noise sources were found to be the<br>idling of trains and plant operating in the loading/unloading<br>area. Sleep arousal may also occur under particular<br>adverse weather conditions.<br>The conclusion clearly indicates that despite mitigation<br>unacceptable exceed aces will occur in Gregory St where<br>no 9 is located |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 856         | O'Carrigan Mr P<br>DoP submission number 329                            |

| pollution      | Dramatic increases in the number of trucks (an extra 900 semi-trailers / day) going along our roads and rail to and around from the site as under the proposal will result in more traffic, more pollution, more noise, increased risk of road accidents and loss of property values. | The truck movements generated by the ILC will be relatively small in the context of the road network and will not result in any significant increase in noise and pollution.                                                                                                                                                                                           | <b>ID</b><br>794 | DoP Submission No 117 |
|                | Sydney Ports proposal would have severe impact on the<br>health of the residents as well as traffic flow within 10km<br>radius of the site causing traffic jam, noise, air and lighting<br>pollution for nearby residents                                                             | The appropriate approach to the management of effects<br>from the rail freight line is one that includes all relevant<br>Government agencies, including DEC, RailCorp and<br>ARTC. SPC will work with these other agencies and<br>relevant Councils to consider ways of managing impacts<br>associated with rail operations in the dedicated freight<br>rail corridor. |                  |                       |

| pollution      | pollution must result from truck movements and no doubt<br>infestation in the proposed storage areas will occur                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Traffic during construction would be managed through a<br>Construction Traffic Management Plan. During<br>operation traffic movements to and from the site would<br>be controlled through a Local Area Traffic Management<br>Plan.<br>Air quality and noise issues are considered in Chapters<br>12 and 11 of the EA Report. The potential for impact on<br>health, wellbeing, and amenity is considered in EA<br>Report Chapter 17.<br>Customs issues would be dealt with at Port Botany.                                                                            | 671         | DoP Submission No 76      |
| pollution      | noise, air and lighting pollution for nearby residents. We<br>don't have to put the lights on in the area, that Is how much<br>of a glow will come from it                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The light spill impacts are considered in Chapter 16 of<br>the EA Report. The proposed lighting would not be<br>expected to change the night landscape as the lights<br>would be focused downwards and would be part of a<br>landscape already containing a large number of light<br>sources. Lighting on site would be designed to meet<br>AS4282 Control of Obtrusive Effects.<br>Air quality and noise issues are considered in Chapters<br>12 and 11 of the EA Report.<br>Pollution levels-air, noise and light spill will be<br>unaffected by the ILC operation. | 107         | DoP Submission No 68      |
| pollution      | My husband and I purchased our home on Punchbowl Rd,<br>Belfield 3 years ago and found that the noise and pollution<br>is already terribly distressing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Air quality and noise issues are considered in Chapters<br>12 and 11 of the EA Report. The potential for impact on<br>health, wellbeing, and amenity is considered in EA<br>Report Chapter 17.                                                                                                                                                                                                                                                                                                                                                                        | 681         | DoP Submission No 94      |
| pollution      | If you had bothered to investigate properly and entered<br>inside any house, flat or unit situated along Liverpool Rd<br>South Strathfield, properties that back onto Centenary<br>Drive West Strathfield,, Barker Rd, Newton Rd, Pemberton<br>St and Ada Ave, Marlene Crescent and Davidson St, you<br>would know that residents here are already bombarded day<br>and night with noise light and fumes from passing traffic.<br>Your proposal means that Enfield, Strathfield and<br>Bankstown will be subjected to 100% of all noise, light and<br>air pollution generated by intermodal activity because<br>every car every truck every bus (for intermodla employees)<br>and every train linked to intermodal activity must come to<br>and through Enfield Strathfield and Bankstown. | Air quality and noise issues are considered in Chapters<br>12 and 11 of the EA Report. The potential for impact on<br>health, wellbeing, and amenity is considered in Chapter<br>17. Traffic to and from the site during operation would be<br>controlled through a Local Area Traffic Management<br>Plan. Further details are provided in Chapter 7 of the EA<br>Report.                                                                                                                                                                                             | 736         | DoP Submission No 129,130 |
| pollution      | There is no mention of provisions against the huge<br>increase in noise, pollution and vibration that will directly<br>affect all residents along the freight lines: The provision of<br>noise walls or sound barriers along residential areas should<br>appear as a reasonable minimum requirement if the project<br>were to go ahead regardless of tax-payers' dissent.                                                                                                                                                                                                                                                                                                                                                                                                                  | The increases addressed in the EA are not huge. The appropriate approach to the management of effects from the rail freight line is one that includes all relevant Government agencies, including DEC, RailCorp and ARTC. SPC will work with these other agencies and relevant Councils to consider ways of managing impacts associated with rail operations in the dedicated freight rail corridor.                                                                                                                                                                  | 788         | DoP Submission No 112     |

| pollution      | I object to the proposal to build a port at Enfield because of pollution                                                                                                                                                      | Air quality and noise issues are considered in the EA<br>Report, Chapters 12 and 11. The potential for impact on<br>health, wellbeing, and amenity is considered in Chapter<br>17 of the EA Report. Traffic to and from the site during<br>operation would be controlled through a Local Area<br>Traffic Management Plan. Further details are provided<br>in Chapter 7 of the EA Report.                                                                                                                                           | 583         | DoP Submission No 1       |
| pollution      | We are very concerned about our family's safety and health<br>due to the high levels of truck movement, queuing and<br>pollution.                                                                                             | Air quality and noise issues are considered in Chapters 12 and 11. The potential for impact on health, wellbeing, and amenity is considered in Chapter 17. Traffic to and from the site during operation would be controlled through a Local Area Traffic Management Plan. Further details are provided in Chapter 7.                                                                                                                                                                                                              | 792         | DoP Submission No 116     |
| pollution      | Light spill at night, is also of concern.                                                                                                                                                                                     | The light spill impacts are considered in Chapter 16. The proposed lighting would not be expected to change the night landscape as the lights would be focused downwards and would be part of a landscape already containing a large number of light sources. Lighting on site would be designed to meet AS4282 Control of Obtrusive Effects.                                                                                                                                                                                      | 447         | DoP Submission No 315,158 |
| pollution      | We oppose the proposal as we already have trucks and<br>semis at the moment and do not which (sic) to increase<br>more pollution and noise                                                                                    | Air quality and noise issues are considered in Chapters<br>12 and 11. The potential for impact on health, wellbeing,<br>and amenity is considered in Chapter 17. Traffic to and<br>from the site during operation would be controlled<br>through a Local Area Traffic Management Plan. Further<br>details are provided in Chapter 7.                                                                                                                                                                                               | 796         | DoP Submission No 169     |
| pollution      | With 24/7 use residents will be greatly affected by a huge increase pollution - lights                                                                                                                                        | Site operations, including lighting issues would be<br>controlled through an operation environmental<br>management plan. Details are provided in Chapter 21.<br>The light spill impacts are considered in Chapter 16. The<br>proposed lighting would not be expected to change the<br>night landscape as the lights would be focused<br>downwards and would be part of a landscape already<br>containing a large number of light sources. Lighting on<br>site would be designed to meet ASNZS4282 Control of<br>Obtrusive Effects. | 798         | DoP Submission No 174     |
| pollution      | You can't even imagine how much noise, dust, vibration,<br>pollution will be experienced by us. Even before the actual<br>functioning starts, there will be so much construction traffic<br>that our life would be made hell. | A series of environmental management measures are to<br>be implemented during construction to avoid or<br>minimise potential negative impacts. These are detailed<br>in Chapter 21.                                                                                                                                                                                                                                                                                                                                                | 542         | DoP Submission No 122     |
| pollution      | The development could cause many hazardous implications such as: visual impact within the residential suburb of Greenacre and Environs                                                                                        | Changes to the visual environment are considered in<br>Chapter 16. The landscape plan will be further<br>developed during detailed design.                                                                                                                                                                                                                                                                                                                                                                                         | 810         | DoP Submission No 168     |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Response                                                                                                                                                                                                                                                                                                                                                                                                                        | Stakeholder | Name                       |

| pollution      | There will be a great deal of truck and train traffic with the associated noise and air pollution | Noise effects from site operation will be managed to an acceptable level. Issues would be addressed in more detail through the Environmental Noise Management Plan.<br>Traffic noise was addressed in Chapter 11. The traffic generated by the ILC will not cause any significant increase in traffic noise.<br>Noted. The appropriate approach to the management of effects from the rail freight line is one that includes all relevant Government agencies, including DEC, RailCorp and ARTC. SPC will work with these other agencies and relevant Councils to consider ways of managing impacts associated with rail operations in the dedicated freight rail corridor. | 840         | DoP Submission No 322 |

| Property Impact | <ul> <li>Effects on property value. Proximity to an industrial<br/>development of this size, particularly if such development<br/>has negative effects in terms of noise, pollution, access etc<br/>is not conducive to the maintenance and growth of property<br/>value. Governments must be aware that interference with<br/>expectations with respect to property value is seen as<br/>inequitable and unjust.</li> </ul> | Property values over Sydney as a whole have been<br>increasing and given the limited impacts associated with<br>the proposal there are no reasons why the proposal<br>would affect local property prices. Further details are<br>provided in Chapter 17.                                                      | 817              | DoP Submission No 120,181    |
| Property Impact | Apart from the changes to our environment this proposal<br>will cause our property will lose value as we try to sell out<br>and escape this mess at a time when fewer people will be<br>in the market to buy in this area.                                                                                                                                                                                                   | Property values over Sydney as a whole have been increasing and given the limited impacts associated with the proposal there are no reasons why the proposal would affect local property prices. Further details are provided in Chapter 17.                                                                  | 828              | DoP Submission No 182        |
| Property Impact | Additional traffic will increase noise levels and devalue property prices.                                                                                                                                                                                                                                                                                                                                                   | Property values over Sydney as a whole have been<br>increasing and given the limited impacts associated with<br>the proposal there are no reasons why the proposal<br>would affect local property prices. Further details are<br>provided in Chapter 17.                                                      | 726              | DoP Submission No 12,178,172 |
| Property Impact | This proposal will not only reduce the monetary value of our home but also our peaceful way of life.                                                                                                                                                                                                                                                                                                                         | Property values over Sydney as a whole have been<br>increasing and given the limited impacts associated with<br>the proposal there are no reasons why the proposal<br>would affect local property prices. Further details in<br>relation to socio economic impacts and amenity are<br>provided in Chapter 17. | 840              | DoP Submission No 322        |

| Rail Issues    | And they are very many people who will be grossly affected<br>by the proposal's increase in freight-traffic; not merely<br>those living right next to the freight-lines, but all people<br>living in close proximity to them. Yet the proposal's<br>Environmental Assessment includes no information<br>whatsoever regarding environmental impacts from the<br>increase in freight-traffic.                                                                                                                                                                                                                                                                                                                                                                                                                 | See above                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 788               | DoP Submission No 112 |
| Rail Issues    | The residents of Belfield have to contend not only with<br>increased vehicular traffic but also rail traffic. Some of<br>these freight trains can be nearly 2km long and although<br>the tracks have been upgraded, the noise and vibrations<br>when the trains are passing through or are stationary and<br>the locomotives idling is significant.                                                                                                                                                                                                                                                                                                                                                                                                                                                         | See above                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 524               | DoP Submission No 110 |
| Rail Issues    | There would be a 220% increase in the number of trains<br>using freight lines. However, rail impacts were downplayed<br>throughout the Port Botany Expansion EIS, with negative<br>impacts of moving more than a million containers by rail<br>through the residential suburbs of Southern Sydney hardly<br>mentioned at all. The EIS relied on previous reports or did<br>not assess impacts along 90% of the rail line to Enfield!<br>This shows the disdain with which the residents along the<br>freight rail corridors are being treated at Sydenham,<br>Marrickville, Hurlstone Park, Campsie, Belfield, Enfield,<br>Chullora and on through Sefton, Chester Hill, Villawood,<br>Cabramatta - Liverpool - Casula - Glenfield – Macquarie<br>Fields - Ingleburn and on to Macarthur. Most of them have | See above<br>Trains to and from the ILC will be no more than 20 per<br>day and in any case the 20 movements will occur<br>whether or not the ILC at Enfield is constructed.                                                                                                                                                                                                                                                                                                  | 30                | DoP Submission No 93  |

|                | no idea that for 24 hours/day 7 days/week, with no curfew,<br>they will experience 7 mins headway between 600 m long<br>freight trains rumbling and screeching past their homes                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                          |                   |                      |
| Rail Issues    | The EA does not include any information on the<br>environmental impacts form the increase in train numbers<br>on the freight line as a result of this proposal and the<br>ongoing expansion of Port Botany                                                                                                                                                                                                                                                                                                                                                | See above<br>Trains to and from the ILC will be no more than 20 per<br>day.                                                              | 563               | DoP Submission No 95 |
| Rail Issues    | Combining all the scenarios together. Cumulative effects.<br>Expansion to Port Botany, Enfield upgrade, Moorebank<br>proposal, Ingleburn, Brooks Road site, Marrickville Truck<br>Tunnel, M4 extension and the East Hills rail line station<br>upgrade to take trains that will travel from Botany to<br>Glenfield in the west carrying double containers.                                                                                                                                                                                                | See above<br>Trains to and from the ILC will be no more than 20 per<br>day.                                                              | 512               | DoP Submission No 45 |
| Rail Issues    | It would appear that the centre will generate operations<br>involving one train every seven minutes seven days a<br>week. The trains quite obviously are large trains with a<br>significant number of carriages of sorts. Each train as it<br>moves past any designated point literally takes a couple of<br>minutes to pass and in doing so creates a regular and<br>continuous noise. Following its departure it is then only 5<br>minutes before this process is once again repeated.                                                                  | See above.<br>Trains to and from the ILC will be no more than 20 per<br>day.                                                             | 626               | DoP Submission No 36 |
| Rail Issues    | With the freight rail corridor expecting 134 total movements<br>per day, good trains will be passing adjacent homes every<br>10 minutes. The minister for Planning should impose limits<br>on freight trains as to tonnage, speed frequency.                                                                                                                                                                                                                                                                                                              | See above<br>Trains to and from the ILC will be no more than 20 per<br>day.                                                              | 597               | DoP Submission No 21 |
| Rail Issues    | Noise from trains.<br>With extra loads, 2 sometimes 3 engines are put on with<br>train lengths running into kms even past our homes. I<br>believe it has been boasted that a train will run every 7<br>minutes, as more trains will be on the track it is inevitable<br>that there will be hold ups. On a red light to entering the<br>facility the screech of brakes is truly unbearable plus the<br>clanging buffers- then the shuddering bang and reverse to<br>start. However this is not constant but if this goes ahead it<br>can only be the norm. | See above<br>Trains to and from the ILC will be no more than 20 per<br>day.                                                              | 499               | DoP Submission No 10 |
| Rail Issues    | We wish to ensure that any development of an ILC is<br>connected by the existing freight line to the Sydney<br>Harbour berths at White bay.<br>The exhibited EA does not appear to deal with this issue.<br>It is important to us, and to the community because White<br>Bay wharves are the sole Harbour wharves capable of rail<br>servicing with exiting infrastructure, and there appear to be<br>no real opportunities for provision of additional rail<br>infrastructure to other wharves. The 'working harbour'<br>concept supports our view.      | There is an existing freight line connection from Wardell<br>Junction to Rozelle and White bay available for freight<br>train operations | 822               | DoP Submission No 43 |

| Reject Proposal | I wish to lodge my objection to the proposal.                                                                                                                                                                                                         | Noted    | 623               | DoP Submission No 32     |
| Reject Proposal | My wife and I have been at the above address fro over 50 years and we wish to object to the proposed terminal on the Enfield Rail Yards site.                                                                                                         | Noted    | 625               | DoP Submission No 33     |
| Reject Proposal | We at 12 Ivy St, Greenacre OPPOSE the building of the Intermodal Logistics Centre at Enfield                                                                                                                                                          | Noted    | 629               | DoP Submission No 38,101 |
| Reject Proposal | I hereby strongly object to the proposal of the building of an<br>intermodal freight terminal at Enfield by Sydney Ports<br>Corporation. Putting it simply I do not want to have the<br>proposed intermodal freight terminal build near where I live. | Noted    | 630               | DoP Submission No 39,98  |
| Reject Proposal | As I live 700-800 metres as the crow flies east of the site of<br>the ILC at Enfield, I feel that I must lodge my form of<br>submission/objection                                                                                                     | Noted    | 512               | DoP Submission No 45     |
| Reject Proposal | I fully object to the Enfield Intermodal Logistics Centre<br>Proposal                                                                                                                                                                                 | Noted    | 618               | DoP Submission No 26     |
| Reject Proposal | I strongly object to this proposal. Today most of the inner west region of Sydney is residential.                                                                                                                                                     | Noted    | 649               | DoP Submission No 65     |
| Reject Proposal | I am writing to express my concern about the current<br>proposal by Sydney Ports Corporation for the development<br>of the planned Enfield Intermodal Logistics Centre at the<br>former Enfield Marshalling Yards site.                               | Noted    | 681               | DoP Submission No 94     |
| Reject Proposal | I object to the proposal to build a port at Enfield                                                                                                                                                                                                   | Noted    | 583               | DoP Submission No 1      |

| Issue Category  | Comments                                                                                                             | Response | Stakeholder | Name                 |
|-----------------|----------------------------------------------------------------------------------------------------------------------|----------|-------------|----------------------|
| Reject Proposal | I would like to object to this proposed undertaking on the grounds of more noise and air pollution                   | Noted    | 593         | DoP Submission No 16 |
| Reject Proposal | I object most vehemently to the above proposal going ahead.                                                          | Noted    | 585         | DoP Submission No 3  |
| Reject Proposal | I would like to add my protest to this proposal. I am not<br>happy for this project to go ahead in its present form. | Noted    | 587         | DoP Submission No 5  |
| Reject Proposal | I wish to lodge an appeal against the facility                                                                       | Noted    | 499         | DoP Submission No 10 |
| Reject Proposal | I strongly object to the development of Enfield Port development                                                     | Noted    | 588         | DoP Submission No 7  |
| Reject Proposal | I object to the proposed Intermodal Logistics Centre-<br>Enfield                                                     | Noted    | 589         | DoP Submission No 9  |
| Reject Proposal | I personally object to the container in this area.                                                                   | Noted    | 594         | DoP Submission No 17 |
| Reject Proposal | We strongly object to this proposal. Please reconsider                                                               | Noted    | 595         | DoP Submission No 18 |
| Reject Proposal | I strongly object to the freight terminal at Enfield as<br>proposed by Sydney Ports                                  | Noted    | 596         | DoP Submission No 19 |

|                 |                                                                                                                                                                                                                                                                                                                                                                             |          | ID          |                       |
| Reject Proposal | I wish to voice my objection to the proposed Enfield<br>Intermodal Logistics Centre Application ref no 05-0147                                                                                                                                                                                                                                                              | Noted    | 563         | DoP Submission No 95  |
| Reject Proposal | My family and I strongly oppose the application due to many reasons                                                                                                                                                                                                                                                                                                         | Noted    | 591         | DoP Submission No 14  |
| Reject Proposal | I oppose the State Government's plans to establish a container terminal and logistics centre at Enfield to support the expansion of Port Botany.                                                                                                                                                                                                                            | Noted    | 811         | DoP Submission No 125 |
| Reject Proposal | I am writing on behalf of my wife and myself to protest the<br>"proposed intermodal logistics centre - Enfield"                                                                                                                                                                                                                                                             | Noted    | 802         | DoP Submission No 118 |
| Reject Proposal | I am 100% opposed to this project.                                                                                                                                                                                                                                                                                                                                          | Noted    | 804         | DoP Submission No 155 |
| Reject Proposal | I wish to voice my objection to the proposed Enfield<br>Intermodal Logistics Centre application ref.no.05-0147.                                                                                                                                                                                                                                                             | Noted    | 805         | DoP Submission No 124 |
| Reject Proposal | I wish to voice my objection to the proposed Enfield<br>Intermodal Logistics Centre, application ref.no.05-0147.                                                                                                                                                                                                                                                            | Noted    | 806         | DoP Submission No 152 |
| Reject Proposal | Thanks for writing to me and sending the brochure for the<br>above. First of all I must again tell you that the idea of<br>making a port similar to Port botany is absolutely<br>preposterous, silly and impractical idea.<br>Whatever conclusions SKM has made and provided in the<br>brief are done by people sitting behind desks and based on<br>absolute presumptions. | Noted    | 542         | DoP Submission No 122 |
| Reject Proposal | I am writing about the Sydney Ports Project - I am against it.                                                                                                                                                                                                                                                                                                              | Noted    | 812         | DoP Submission No 133 |

| Reject Proposal | We, the Abboud Household of 10 Wentworth Street<br>Greenacre, write to Inform you of our strong objection to<br>the Proposed Intermodel Logistics Centre at Enfield -<br>Application Q5JD147.                                                                                                                                                                                                                                                                                                                                         | Noted                                                                                                                                                                                                                                                                                                                                                                                                           | 792         | DoP Submission No 116 |
| Reject Proposal | We strongly oppose the construction of the proposed<br>Intermodal Logistics Centre at Enfield                                                                                                                                                                                                                                                                                                                                                                                                                                         | Noted                                                                                                                                                                                                                                                                                                                                                                                                           | 795         | DoP Submission No 161 |
| Reject Proposal | I am making this submission on behalf of the Summer<br>Hill-Ashfield greens, a group with members residing in the<br>Strathfield, Burwood ,Canada Bay and Ashfield Council<br>areas. The Summer Hill-Ashfield Greens object to the<br>above proposal for the reasons outlined below traffic air<br>noise                                                                                                                                                                                                                              | Noted                                                                                                                                                                                                                                                                                                                                                                                                           | 686         | DoP Submission No 73  |
| Reject Proposal | I am writing to voice my concerns about having the Enfield<br>ILC at Enfield. As I am a resident of Jean St, Greenacre,<br>located in the vicinity of your development, I am concerned<br>about the development's impact and the impact of traffic<br>flow on our street and general area.                                                                                                                                                                                                                                            | Concerns regarding Jean St noted. Traffic during<br>operation would be controlled through a Local Area<br>Traffic Management Plan. Other measures to mitigate<br>impacts are provided in Chapter 7 of the EA report.                                                                                                                                                                                            | 633         | DoP Submission No 46  |

| Reject Proposal | We are writing to express our opposition to the development of an ILC at Enfield. We believe that such a facility will impact in a serious and negative manner on the quality of life of local residents, as well as creating financial problems for local councils and traffic difficulties for Sydney itself.                                                                                                                                                                                                                       | Noted. Traffic during operation would be controlled<br>through a Local Area Traffic Management Plan.<br>Amenity, quality of life and wellbeing are addressed in<br>Chapter 17.                                                                                                                                                                                                                                  | 626         | DoP Submission No 36  |
| Reject Proposal | <ul> <li>I am writing to express my strong objection to the proposal by Sydney Ports Corporation for the development of an Intermodal Logistics Centre at the former Enfield Marshalling Yards. My objections are based on:</li> <li>High population density of the area and surrounds</li> <li>Hume Highway congestion</li> <li>Schools along Hume Highway, and surrounds</li> <li>Pollution from trucks and trains</li> <li>Infestation from proposed storage areas</li> <li>Noise - cacophony from trucks, trains, etc.</li> </ul> | Noted.<br>The land use immediately surrounding the site is<br>predominantly industrial as described in Chapter 14.<br>Traffic issues are further considered in Chapter 7 and a<br>Local Area Traffic Management Plan is to be prepared<br>during detailed design.<br>Noise and Air Quality (from trucks and trains) is<br>assessed in Chapter 11 and 12.<br>Customs issues are to be dealt with at Port Botany. | 671         | DoP Submission No 76  |

| Reject Proposal | I am writing to express my strong objection to the proposal<br>by Sydney Ports Corporation for the development of the<br>Enfield Intermodal Logistics Centre at the former Enfield<br>Marshalling Yards surrounded by thickly populated Inner<br>West residential suburbs of Greenacre, Lakemba,<br>Belmore, South Strathfield, Strathfield and Chullora | Noted.<br>The land use immediately surrounding the site is<br>predominantly industrial as described in Chapter 14.<br>Socio economic issues are considered in Chapter 17.                                                                                                                                                                           | 107               | DoP Submission No 68     |
| Reject Proposal | Please accept this letter outlining our objection to the proposed ILC at Enfield. We believe that if this development were to go ahead, our local area would be severely impacted.                                                                                                                                                                       | Noted<br>Amenity issues are considered in Chapter 17.                                                                                                                                                                                                                                                                                               | 631               | DoP Submission No 42     |
| Reject Proposal | I strongly object to the proposed intermodal logistics Centre<br>at Enfield App 05.0147. We are talking here about a big<br>change in the area, so I strongly object to that propose plan<br>on that big scale to be done                                                                                                                                | Noted<br>Amenity issues are considered in Chapter 17.                                                                                                                                                                                                                                                                                               | 584               | DoP Submission No 2      |
| Reject Proposal | I am objecting to the proposal because of traffic movements                                                                                                                                                                                                                                                                                              | Noted. Traffic issues have been addressed in Chapter 7.<br>Traffic movements during operation would be controlled<br>through the Local Area Traffic Management Plan.                                                                                                                                                                                | 590               | DoP Submission No 11     |
| Reject Proposal | I am really opposed of you not considering and<br>understanding our case. Find somewhere else for your<br>trucks.                                                                                                                                                                                                                                        | Noted. Traffic issues have been addressed in Chapter 7.<br>Traffic movements during operation would be controlled<br>through the Local Area Traffic Management Plan.<br>Alternative sites are reviewed in Chapter 3.                                                                                                                                | 622               | DoP Submission No 31,100 |
| Reject Proposal | I wish to object to the proposal because of noise and traffic                                                                                                                                                                                                                                                                                            | Noted. Noise issues are considered in Chapter 11 and<br>Traffic within Chapter 7. Management measures are<br>proposed during construction and operation to minimise<br>the impact to local residents.                                                                                                                                               | 592               | DoP Submission No 15     |
| Reject Proposal | I am writing to voice my concerns of having the Enfield<br>Intermodal Logistic Terminal at Enfield. As I am a resident<br>of Jean St Greenacre located in the vicinity of your<br>development, I am concerned the above environmental<br>impact, and the traffic flow this will have on our street and<br>general area.                                  | Concerns regarding Jean St noted. Traffic during<br>operation would be controlled through a Local Area<br>Traffic Management Plan.<br>Other measures to mitigate impacts are provided in<br>Chapter 7 of the EA report.                                                                                                                             | 620               | DoP Submission No 27,306 |
| Reject Proposal | Strongly objects to proposal, concern about traffic , noise and decreasing property values                                                                                                                                                                                                                                                               | Noted. Noise issues are considered in Chapter 11,<br>Traffic within Chapter 7 and property impacts in Chapter<br>17. Management measures are proposed during<br>construction and operation to minimise the impact to<br>local residents.                                                                                                            | 598               | DoP Submission No 22     |
| Reject Proposal | The purpose of this letter is to notify you of our objection to<br>the ILC Enfield development. The issue we are concerned<br>with is noise.<br>We urge the NSW Government not to approve the<br>development and find a suitable site with less impacts on<br>established residential areas.                                                             | Noise issues have been addressed in Chapter 11.<br>Noise mitigation measures have been proposed and are<br>to be further developed during detailed design.<br>Construction and Operation Environmental<br>Management Plans are to be implemented to minimise<br>the potential for negative impacts.<br>Alternative sites are reviewed in Chapter 3. | 599               | DoP Submission No 23     |

| Reject Proposal | I am opposed to the Sydney Ports Project for Enfield as the<br>noise from heavy vehicles plus the pollution will affect our<br>health and well being.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Traffic issues are further considered in Chapter 7 and a<br>Local Area Traffic Management Plan is to be prepared<br>during detailed design.<br>Noise and Air Quality (from trucks and trains) is<br>assessed in Chapter 11 and 12. | 93          | DoP Submission No 25      |
| Reject Proposal | In light of the cost to our community versus any benefit from<br>this proposal I formally register my opposition to this<br>project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Noted.                                                                                                                                                                                                                             | 801         | DoP Submission No 149,183 |
| Reject Proposal | This is to object to the proposal on the following grounds, consultation process and safety.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Noted                                                                                                                                                                                                                              | 621         | DoP Submission No 29,72   |
| Reject Proposal | My submission to be considered as an objection to the<br>proposed Sydney Ports terminal at Enfield. As further it's<br>potential to impact on the Bankstown Council area and in<br>particular within the roads of the residential suburbs of<br>Greenacre, which I feel would be bounded by this<br>development.                                                                                                                                                                                                                                                                                                                                                                                                    | Noted. Traffic issues are further considered in Chapter 7<br>and a Local Area Traffic Management Plan is to be<br>prepared during detailed design.                                                                                 | 810         | DoP Submission No 168     |
| Reject Proposal | We oppose the proposal as we already have trucks and<br>semis at the moment and do not which (sic) to increase<br>more pollution and noise                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Noted. Traffic issues are further considered in Chapter 7<br>and a Local Area Traffic Management Plan is to be<br>prepared during detailed design.                                                                                 | 796         | DoP Submission No 169     |
| Reject Proposal | We are opposed to the development.<br>This proposal is unacceptable. There is little regard to the<br>impact on residential areas. Sydney Airport hours of<br>operation are restricted and a curfew imposed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Noted. The ILC is to operate 24 hours a day 7 days a week. Measures to minimise impacts during operation are to be managed through an Operation Environmental Management Plan.                                                     | 31          | DoP Submission No 136     |
| Reject Proposal | I am again writing to express my strong objection to the<br>proposal by Sydney Ports Corporation for the development<br>of the Enfield Intermodal Logistics Centre at the former<br>Enfield Marshalling Yards. The site is bounded by the<br>suburbs of Greenacre, Lakemba, Belmore, Belfield, South<br>Strathfield, Strathfield and Chullora and the impacts on<br>these immediate areas would be extremely unfavourable.<br>Any use of the Enfield Marshalling Yards as a freight<br>terminal should not be approved. The site is completely<br>unsuitable for such a facility given its proximity to<br>residential areas and the adverse community and<br>environmental impacts the redevelopment would create. | Noted.                                                                                                                                                                                                                             | 45          | DoP Submission No 179     |
| Reject Proposal | The Environmental Assessment in fact demonstrates and<br>quite convincingly, that there are significant and intractable<br>existing or emerging problems in the area bounding the<br>proposed site, particularly with respect to the operation of<br>the road network, critical intersection capacity, noise<br>criteria and ajr quality. The general conclusion of the EA is,<br>however, that whatever additional impact the proposed                                                                                                                                                                                                                                                                             | Noted.                                                                                                                                                                                                                             | 817         | DoP Submission No 120,181 |

|                 | Intermodal Terminal may have on the locality would be, in<br>relative terms, "minimal".<br>This reasoning not only defies logic, but is contrary to all<br>sensible planning practice. Futhermore for a project with an<br>underpinning economic objective to ignore externalities<br>such conclusions are severely flawed                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                |                   |                           |
| Reject Proposal | The comments about traffic above are just a small part of<br>the number of overall objections we have to the<br>Enviromental Asssessment for the Intermodal Logistics<br>Centre at Enfield. We feel it necessary to register our<br>objections to this project, and the primary object of this<br>submission is to state just a few of these concerns. Our<br>main thrust is clearly towards the problem of traffic<br>congestion.                                                                               | Noted. Traffic issues are further considered in Chapter 7<br>and a Local Area Traffic Management Plan is to be<br>prepared during detailed design.                                                                                                                                             | 834               | DoP Submission No 319     |
| Reject Proposal | I urge the State Government to reconsider this<br>infrastructure development proposal. I do not<br>want an Inter-modal Logistics Centre in Enfield or the<br>resulting damage to the environment and increase in<br>pollution and traffic congestion.                                                                                                                                                                                                                                                            | Noted.                                                                                                                                                                                                                                                                                         | 789               | DoP Submission No 113     |
| Reject Proposal | Completely object to the proposed Intermodal Logistics<br>Centre - Enfield. The reason is<br>- there will be more pollution in our area<br>- there will be more traffic in our local area<br>- More trains will be passing behind my backyard<br>(especially at night)<br>- I am a pensioner and I think my health will be affected.                                                                                                                                                                             | Noted. Traffic issues are further considered in Chapter 7<br>and a Local Area Traffic Management Plan is to be<br>prepared during detailed design.<br>Noise and Air Quality (from trucks and trains) is<br>assessed in Chapter 11 and 12. Health and wellbeing is<br>considered in Chapter 17. | 716               | DoP Submission No 70      |
| Reject Proposal | We object vehemently to the abovementioned proposal of<br>SPC because of the adverse effect it will have on Enfield<br>and its surrounding suburban residential zones.                                                                                                                                                                                                                                                                                                                                           | Noted.                                                                                                                                                                                                                                                                                         | 736               | DoP Submission No 129,130 |
| Reject Proposal | In relation to an intermodal terminal at Enfield, there are no good environmental or social or even sound economic reasons to go ahead with this development. The fact that previous proposals have either "fallen over" or been rejected in previous reviews is demonstrative of the fact that these reviews have recognised that there are good reasons for intermodal terminal proposals at Enfield to be rejected. It's time the concept of an intermodal terminal at Enfield was rejected once and for all. | Noted.                                                                                                                                                                                                                                                                                         | 30                | DoP Submission No 93      |
| Reject Proposal | Please accept this letter outlining our objection to the proposed Intermodal Logistics Centre (ILC) at Enfield. We believe that if this development were to go ahead, our local area would be severely impacted.                                                                                                                                                                                                                                                                                                 | Noted.                                                                                                                                                                                                                                                                                         | 786               | DoP Submission No 106     |
| Reject Proposal | I am angry and ask you to cancel the Sydney Ports Enfield<br>Intermodal Proposal. For us living in this area it would be<br>just the limit more noise, more traffic and more<br>inconvenience.                                                                                                                                                                                                                                                                                                                   | Noted.                                                                                                                                                                                                                                                                                         | 799               | DoP Submission No 139     |

| Reject Proposal | In view of my grave concerns and other residents strong<br>and grave concerns about this gross overdevelopment at<br>Port Enfield I submit that this proposal be again totally<br>ejected and another intermodal sites be developed around<br>Sydney. Create jobs in Sydney's west not in the inner west.                                                                                                                                                                                                      | Noted.                                                                                                                                                                    | 798         | DoP Submission No 174     |
| Reject Proposal | We would like you to note that we object to the proposed<br>ILC Enfield and that we were not included in the community<br>consultation processes of the 2001 consultative phase, the<br>Milton Morris Review or the 2004 Stolznow research.                                                                                                                                                                                                                                                                    | Noted.                                                                                                                                                                    | 790         | DoP Submission No 137     |
| Reject Proposal | I object to the above on the basis of its nature, size,<br>(present and future) and its position in relation to the<br>environment in which it is situated and I object to having to<br>object once again to this proposal. It will be a large and<br>noisy traffic generating development right in the centre of<br>suburban western Sydney between Belfield, South<br>Strathfield and Greenacre suburbs where a lot of people<br>live and work and where there is already a great deal of<br>through traffic | Noted.                                                                                                                                                                    | 793         | DoP Submission No 147     |
| Reject Proposal | I am writing to express my strong objection to the proposal<br>by Sydney Ports Corporation for the development of the<br>Enfield Intermodal Logistics Centre at the former Enfield<br>Marshalling Yards surrounded by the thickly populated<br>Inner West residential suburbs of Greenacre, Lakemba,<br>Belmore, South Strathfield, Strathfield and Chullora                                                                                                                                                   | Noted.<br>The land use immediately surrounding the site is<br>predominantly industrial as described in Chapter 14.<br>Socio economic issues are considered in Chapter 17. | 794         | DoP Submission No 117     |
| Reject Proposal | I hereby formally lodge my objection to this development<br>due to the adverse social, environmental and economic<br>impacts the development would have on the Strathfield<br>Local Government Area.                                                                                                                                                                                                                                                                                                           | Noted                                                                                                                                                                     | 838         | DoP Submission No 173,150 |
| Reject Proposal | I am writing to express my complete and total opposition to<br>the proposal by SPC for the development of the Enfield<br>Intermodal Logistics Centre to be established at the former<br>Enfield Marshalling Yards.                                                                                                                                                                                                                                                                                             | Noted.                                                                                                                                                                    | 840         | DoP Submission No 322     |
| Reject Proposal | I strongly object to the proposed terminal at Enfield                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Noted.                                                                                                                                                                    | 841         | DoP Submission No 323     |
| Reject Proposal | I strongly object to the proposed terminal at Enfield                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Noted.                                                                                                                                                                    | 66          | DoP Submission No 324     |
| Reject Proposal | I strongly object to the logistics terminal at Enfield                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Noted.                                                                                                                                                                    | 842         | DoP Submission No 325     |

| Safety         | Enfield and surrounding areas are predominantly<br>residential this will result in a number of detrimental effects<br>including a risk to local pedestrians.                                                                                                                                                                                                                                     | Pedestrian safety is not identified as a problem on the<br>roads adjoining the ILC. Nevertheless pedestrian safety<br>would be considered during preparation of the Local<br>Area Traffic Management Plan.                                                                                                                                                          | 786         | DoP Submission No 106   |
| Safety         | My concern is that the local schools will suffer along with<br>our children as the roads will become dangerous for<br>children                                                                                                                                                                                                                                                                   | Pedestrian safety is not identified as a problem on the<br>roads adjoining the ILC. Nevertheless pedestrian safety<br>would be considered during preparation of the Local<br>Area Traffic Management Plan                                                                                                                                                           | 591         | DoP Submission No 14    |
| Safety         | The freight terminal will concentrate truck numbers and<br>movements in our local community resulting in more<br>serious accidents involving large vehicles.<br>The danger that the increased number of trucks pose on<br>our streets is unacceptable.                                                                                                                                           | Crash data was reviewed during preparation of the EA<br>report. Further details are contained in Chapter 7 and<br>Appendix B. Pedestrian safety would be a key<br>consideration during preparation of the Local Area<br>Traffic Management Plan. SPC also proposes<br>intersection improvements at Norfolk/Roberts to ensure<br>safe operation of this intersection | 596         | DoP Submission No 19    |
| Safety         | The concern re the huge number of car accidents that<br>occur on the intersection of Roberts Rd and Norfolk Rd<br>already. This is a well known black spot area. There has<br>been many people killed at this intersection. With the extra<br>huge amount of daily truck movements, the proposed<br>terminal would bring, the potential for more accidents to<br>occur is a worrying possibility | Crash data was reviewed during preparation of the EA<br>report. Further details are contained in Chapter 7 and<br>Appendix B. Pedestrian safety would be a key<br>consideration during preparation of the Local Area<br>Traffic Management Plan                                                                                                                     | 630         | DoP Submission No 39,98 |
| Safety         | The building of the ILC is substantial and will result in a large increase in semi trailer truck movements in the Enfield area. Since the Enfield and surrounding areas are predominantly residential, this will result in a number of detrimental effects including a risk to local pedestrians.                                                                                                | ILC operation traffic impacts have been modelled,<br>further details are provided in Chapter 7. Trucks would<br>be prevented from using residential streets through the<br>Local Area Traffic Management Plan which will be<br>prepared with due consideration of pedestrian safety.                                                                                | 631         | DoP Submission No 42    |
| Safety         | Perish the thought that there should ever be a disaster in<br>this area- and/or that I should urgently need an ambulance.<br>Has a critical incident plan been worked out?                                                                                                                                                                                                                       | An Emergency Response and Incident Management<br>Plan would be prepared for the site. Emergency vehicle<br>access would also be considered during preparation of<br>the Local Area Traffic Management Plan.                                                                                                                                                         | 649         | DoP Submission No 65    |
| Safety         | increased risk of road accidents                                                                                                                                                                                                                                                                                                                                                                 | Crash data was reviewed during preparation of the EA<br>report. Further details are contained in Chapter 7 and<br>Appendix B. Pedestrian safety would be a key<br>consideration during preparation of the Local Area<br>Traffic Management Plan                                                                                                                     | 107         | DoP Submission No 68    |
| Safety         | There are issues of public safety, health and community rights which have not been properly addressed                                                                                                                                                                                                                                                                                            | Crash data was reviewed during preparation of the EA<br>report. Further details are contained in Chapter 7 and<br>Appendix B. Pedestrian safety would be a key<br>consideration during preparation of the Local Area<br>Traffic Management Plan                                                                                                                     | 621         | DoP Submission No 29,72 |

| Safety         | Dramatic increases in the number of trucks going along<br>odour roads and rail to and from the site as under the<br>proposal will result in more traffic, more pollution more<br>noise, increased risk of road accidents and increased<br>health risks.                                                                                                                                                                                                                                                     | ILC operation traffic impacts have been modelled,<br>further details are provided in Chapter 7. Trucks would<br>be prevented from using residential streets through the<br>Local Area Traffic Management Plan which will be<br>prepared with due consideration of pedestrian safety.<br>Potential impacts in relation to noise, air quality and<br>health are further considered in Chapters 11, 12 and 17.                                                                                                                                                                                                                  | 713         | DoP Submission No 138,140,143,119 |
| Safety         | Project will increase accidents                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Crash data was reviewed during preparation of the EA<br>report. Further details are contained in Chapter 7 and<br>Appendix B. Further consideration of safety issues<br>would be undertaken during preparation of the Local<br>Area Traffic Management Plan                                                                                                                                                                                                                                                                                                                                                                  | 589         | DoP Submission No 9               |
| Safety         | Police records will show that many many accidents occur at<br>the corner of Hume Hwy and Wallis Ave South Strathfield,<br>and at the corner of the Hume Hwy and Cosgrove Rd. Any<br>increase in vehicular activity generated by the Intermodal<br>will exacerbate these problems and totally destroy any<br>quality of life residents in these areas have left.                                                                                                                                             | Crash data was reviewed during preparation of the EA<br>report. Further details are contained in Chapter 7 and<br>Appendix B. Further consideration of safety issues<br>would be undertaken during preparation of the Local<br>Area Traffic Management Plan<br>Amenity and quality of life is further considered in<br>Chapter 17.                                                                                                                                                                                                                                                                                           | 736         | DoP Submission No 129,130         |
| Safety         | The increasing amount of traffic already evident has made<br>Roberts Rd a very dangerous Rd. Very frequently we<br>witness major accidents and loss of lives because of the<br>traffic and speeding drivers. The heavy traffic already<br>makes it very difficult and dangerous when exiting our<br>driveways. To build a freight terminal in Enfield will lead to<br>increased traffic, a more dangerous road and worse<br>conditions for residents, drivers and the neighbouring<br>schools in the areas. | ILC operation traffic impacts have been modelled,<br>further details are provided in Chapter 7. Trucks would<br>be prevented from using residential streets through the<br>Local Area Traffic Management Plan which will be<br>prepared with safety the key consideration. Crash data<br>was reviewed during preparation of the EA report.<br>Further details are contained in Chapter 7 and<br>Appendix B.                                                                                                                                                                                                                  | 829         | DoP Submission No 245             |
| Safety         | We are very concerned about our family's safety and health<br>due to the high levels of truck movement, queuing and<br>pollution.                                                                                                                                                                                                                                                                                                                                                                           | ILC operation traffic impacts have been modelled,<br>further details are provided in Chapter 7. Trucks would<br>be prevented from using residential streets through the<br>Local Area Traffic Management Plan which will be<br>prepared with safety as the key consideration. Crash<br>data was reviewed during preparation of the EA report.<br>Further details are contained in Chapter 7 and<br>Appendix B.<br>Noise and air quality are further considered in Chapters<br>11 and 12 of the EA Report.                                                                                                                    | 792         | DoP Submission No 116             |
| Safety         | Dramatic increases in the number of trucks (an extra 900 semi-trailers / day) going along our roads and rail to and around from the site as under the proposal will result in more traffic, more pollution, more noise, increased risk of road accidents and loss of property values.                                                                                                                                                                                                                       | ILC operation traffic impacts have been modelled,<br>further details are provided in Chapter 7. Trucks would<br>be prevented from using residential streets through the<br>Local Area Traffic Management Plan which will be<br>prepared with safety as the key consideration. Crash<br>data was reviewed during preparation of the EA report.<br>Further details are contained in Chapter 7 and<br>Appendix B.<br>Property values over Sydney as a whole have been<br>increasing and given the limited impacts associated<br>with the proposal, there are no reasons why the<br>proposal would affect local property prices. | 794         | DoP Submission No 117             |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                | ID          |                           |
| Safety         | The purpose of this submission is to object to the proposal.<br>Reasons for the objection of this proposal include potential<br>increase in accidents and light spills from trucks                                                                                                                                                                                                                                                                              | ILC operation traffic impacts have been modelled,<br>further details are provided in Chapter 7. Trucks would<br>be prevented from using residential streets through the<br>Local Area Traffic Management Plan which will be<br>prepared with safety as the key consideration.<br>Crash data was reviewed during preparation of the EA<br>report. Further details are contained in Chapter 7 and<br>Appendix B. | 803         | DoP Submission No 153     |
| Safety         | Since the Enfield and surrounding areas are predominantly<br>residential, this will result in a number of detrimental effects<br>including, noise pollution, air pollution and a risk to local<br>pedestrians.                                                                                                                                                                                                                                                  | ILC operation traffic impacts have been modelled,<br>further details are provided in Chapter 7. Trucks would<br>be prevented from using residential streets through the<br>Local Area Traffic Management Plan which will be<br>prepared with safety as the key consideration.<br>Noise and air quality are assessed in Chapter 11 and<br>12.                                                                   | 809         | DoP Submission No 123     |
| Safety         | Hazardous substances such as diesel and LPG will be<br>stored on sight to pose a significant threat to the local<br>community.                                                                                                                                                                                                                                                                                                                                  | A Preliminary Hazard Assessment for the proposal was<br>conducted. Further details are provided in Chapter 20.<br>All fuel stored on site would be undertaken with due<br>consideration of the potential risks, to be determined<br>during the detailed design.<br>An Emergency Response and Incident Management<br>Plan would also be prepared for the site.                                                  | 813         | DoP Submission No 176     |
| Safety         | Apart from economic and health issues, there is an issue of<br>national security. It is not a good idea to store fuel on site<br>near a residential area. It was fortunate the fire at Port<br>Botany (in 2005) did not injure or harm lives as it was far<br>from a residential area. It is proposed that fuel be not stored<br>on site.                                                                                                                       | A Preliminary Hazard Assessment for the proposal was<br>conducted. Further details are provided in Chapter 20.<br>All fuel stored on site would be undertaken with due<br>consideration of the potential risks, to be determined<br>during the detailed design.<br>An Emergency Response and Incident Management<br>Plan would also be prepared for the site                                                   | 814         | DoP Submission No 135     |
| Safety         | The proposal will result in increased risk of road accidents                                                                                                                                                                                                                                                                                                                                                                                                    | ILC operation traffic impacts have been modelled,<br>further details are provided in Chapter 7. Trucks would<br>be prevented from using residential streets through the<br>Local Area Traffic Management Plan which will be<br>prepared with safety as the key consideration.<br>Crash data was reviewed during preparation of the EA<br>report. Further details are contained in Chapter 7 and<br>Appendix B. | 45          | DoP Submission No 179     |
| Safety         | The EA details the accident history in the study area.(p30 FTWPaper) It is suggested that this study area is far too limited to be indicative of road safety issues. Although the study is limited, the statistics speak volumes- over a 5 year period 1213 accidents reported 559 of these injuring. There is no detail of breakdowns and traffic delays caused by both accidents and breakdowns which is a critical factor in efficiency of the road network. | ILC operation traffic impacts have been modelled,<br>further details are provided in Chapter 7. Trucks would<br>be prevented from using residential streets through the<br>Local Area Traffic Management Plan which will be<br>prepared with safety as the key consideration.<br>Crash data was reviewed during preparation of the EA<br>report. Further details are contained in Chapter 7 and<br>Appendix B. | 817         | DoP Submission No 120,181 |

| Socio Economic | Any use of the Enfield Marshalling Yards as a freight<br>terminal should not be approved. The site is completely<br>unsuitable for such facility given its proximity residential<br>areas and the adverse community and environmental<br>impacts the redevelopment would create. It would have<br>disastrous impacts on our community, our environment and<br>on our roads.                                                                                                                                                                                         | The suitability of the site is clearly demonstrated in the EA. A summary of the project justification is provided in Chapter 22.                                                                                                                                                                                                                                                                           | 794               | DoP Submission No 117 |
|                | I acknowledge the economic importance' of NSW of being<br>able to cater for an expected increase in containerized<br>trade over the coming decades. However, I am particularly<br>concerned about the wider environmental and health<br>impacts of vastly increasing the movement of freight in our<br>region.                                                                                                                                                                                                                                                      | Impacts on air and noise from the operation of the site<br>are acceptable within relevant guidelines and should<br>have no implications for public health. These issues<br>have been considered in Chapter 17. Removal of a<br>significant volume of the freight traffic present on the<br>road system and placing it onto the rail network will have<br>beneficial air quality impacts on a larger scale. |                   |                       |
| Socio Economic | You mention community opportunities but do not specify<br>what these may be. Work opportunities could be the only<br>opportunities which are obvious but this would mean that<br>buses would have to bring the workers who will not be<br>using the shopping facilities at Chullora or at Strathfield.                                                                                                                                                                                                                                                              | Opportunities for community include:<br>-employment (direct and indirect) including for Cosgrove<br>Rd ancillary uses proposed in the Commercial/Industrial<br>area.<br>-community groups to utilise the community and<br>ecological area in a controlled access regime.<br>-assist in the decision and the future use of the Tarpaulin<br>Shed                                                            | 587               | DoP Submission no 5   |
| Socio Economic | It should be noted that this suburb is considered one of<br>prestige within Sydney and the logistics centre would<br>clearly lead to the demise of the reputation and value that<br>this suburb has for many generations.                                                                                                                                                                                                                                                                                                                                           | Noted.<br>Further assessment of the impacts on health, well being<br>and quality of life are provided in EA Report Chapter 17.                                                                                                                                                                                                                                                                             | 591               | DoP Submission No 14  |
| Socio Economic | The freight terminal will concentrate truck numbers and movements in our local community resulting in poorer health.                                                                                                                                                                                                                                                                                                                                                                                                                                                | The operation of the ILC will comply with relevant air and<br>noise guidelines and should therefore have no<br>implications for public health. These issues have been<br>considered in EA Report Chapter 17. Removal of a<br>significant volume of the freight traffic present on the<br>road system and placing it onto the rail network will have<br>beneficial air quality impacts on a larger scale.   | 596               | DoP Submission No 19  |
| Socio Economic | While the construction and operation of the Enfield ILC may<br>be able to employ some of the many unemployed in the<br>nearby suburbs- a noble aspiration indeed- SPC chooses<br>to ignore the negative aspects which would affect many<br>other citizens in those nearby suburbs.<br>SPC would argue that it costs more to shift goods further by<br>rail, to then truck them back in an easterly direction. But if<br>they are already on the rail how much more does it cost to<br>go further by rail before unloading in the centre of the<br>market catchment? | Consideration of the social and economic aspects of the proposal are considered in EA Report Chapter 17.<br>The ILC is the most appropriate site for servicing the market catchment of the inner and middle western Sydney.                                                                                                                                                                                | 597               | DoP Submission No 21  |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | beneficial air quality impacts on a larger scale.                                                                                                                                                                                                                                                                                                                                                                        |             |                                   |
| Socio Economic | It would have disastrous impacts on our community, our<br>environment and our roads. I am particularly concerned<br>about the wider environmental and health impacts of vastly<br>increasing the movement of freight in our region.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The operation of the ILC will comply with relevant air and noise guidelines and should therefore have no implications for public health. These issues have been considered in EA Report Chapter 17. Removal of a significant volume of the freight traffic present on the road system and placing it onto the rail network will have beneficial air quality impacts on a larger scale.                                   | 713         | DoP Submission No 138,140,143,119 |
| Socio Economic | Enfield and its surrounding suburbs are working class<br>suburbs with many residents being shift workers who<br>deserve a restful sleep when required by their employment<br>schedules.<br>It has long been established by the medical profession who<br>have researched populations in and around industrial<br>areas that people who live in areas of noise air and light<br>pollution suffer with:<br>1.stress due to lack of restful sleep and lack of respite from<br>constant noise<br>2. respiratory problems due to pollutants in the air<br>3. Digestive problems. Due to the inability of the lungs to<br>cope with polluted air people involuntarily begin to breathe<br>through their mouths and the pollutants are not only<br>therefore around the body via the lungs but also through<br>the digestive system<br>4. skin problems from the toxins in the air. | Noted.<br>The operation of the ILC will comply with relevant air and<br>noise guidelines and should therefore have no<br>implications for public health. These issues have been<br>considered in EA Report Chapter 17. Removal of a<br>significant volume of the freight traffic present on the<br>road system and placing it onto the rail network will have<br>beneficial air quality impacts on a larger scale.       | 736         | DoP Submission No 129,130         |
| Socio Economic | The FIAB report recommends adequate buffering to<br>residential areas, Community Consultative Committees to<br>ensure that local residents are "informed of terminal<br>operations" and to provide "liaison with operators" and<br>heavy penalties for container traffic through residential<br>areas. Noise impacts for the Botany Rail Line is swept<br>aside with the statement:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The appropriate approach to the management of effects<br>from the rail freight line through is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will be happy to work with<br>these other agencies and relevant Councils to consider<br>ways of managing impacts associated with rail<br>operations in the dedicated freight rail corridor.                               | 30          | DoP Submission No 93              |
| Socio Economic | Politicians would not dare to take up a project of this size<br>somewhere in wealthy Northern or Eastern suburbs. But<br>who care as about Canterbury and surrounding councils-<br>comparatively poor suburbs with low education levels and<br>migrant population.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Further discussion of alternatives considered is provided in EA Report Chapter 3.                                                                                                                                                                                                                                                                                                                                        | 588         | DoP Submission No 7               |
| Socio Economic | It would have disastrous impacts on our community, our<br>environment and our roads. Dramatic increases in the<br>number of trucks going along our roads to and from the site<br>as under the proposal will result in:<br>Increased traffic<br>Increased pollution<br>Increased noise<br>Increased risk of road accidents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | ILC operation traffic impacts have been modelled,<br>further details are provided in Chapter 7. Trucks would<br>be prevented from using residential streets through the<br>Local Area Traffic Management Plan which will be<br>prepared with safety as the key consideration.<br>Noise and air quality are further considered in Chapters<br>11 and 12 of the EA Report.<br>Health issues and property impacts have been | 45          | DoP Submission No 179             |

|                | <ul> <li>Loss of property values.</li> <li>However, I am particularly concerned about the wider<br/>environmental and health impacts of vastly increasing the<br/>movement of freight in our region.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | considered in EA Report Chapter 17.<br>The operation of the ILC will comply with relevant air and<br>noise guidelines and should therefore have no<br>implications for public health. Removal of a significant<br>volume of the freight traffic present on the road system<br>and placing it onto the rail network will have beneficial<br>air quality impacts on a larger scale.                                                                                                                                                                                                                                                                                                                                                                |             |                           |
| Socio Economic | It is our understanding that there are no legislated<br>restrictions on emissions from diesel train engines. This<br>could have a significant health impact for Sydney residents<br>through exposure to the deposition of particulate matter<br>and toxins from these engines that are known be<br>detrimental to the respiratory and cardiovascular health<br>and longevity of residents, especially the very young and<br>the elderly, or those with existing health conditions.<br>If part of the Enfield site was sold for development, the<br>resulting income could be added to the funds set aside to<br>achieve the aims of the report.<br>Again, noise, road congestion and emissions from the extra<br>trucks will be a severe health issue in such a dense<br>residential area.<br>Public/private development. The report relies heavily on<br>private sector participation.<br>The Cross City Tunnel and the Airport/East Hills line<br>projects have clearly demonstrated the difficulties likely to<br>occur when government bends over backwards to<br>encourage private business, at great cost to the<br>community. '<br>7. The cost of acquiring the proposed intermodal sites at<br>Eastern Creek and Moorebank could be astronmomical.<br>There is no estimate of such costs. The Federal<br>Government.<br>The Freight Infrastructure Charge is supposed to raise<br>\$375 million (the time span is not indicated) to pay for all<br>the recommendations of this report (p35, para.2), using<br>valuations determined by the Department of Commerce.<br>This amount, at least, will be required just to up-grade the<br>road and rail infrastructure in proximity to Port Botany.<br>Will a charge apply to empty containers taken by road?<br>12% of containers exported from Sydney are empty ' | The appropriate approach to the management of effects<br>from the rail freight line though is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will be happy to work with<br>these other agencies and relevant Councils to consider<br>ways of managing impacts associated with rail<br>operations in the dedicated freight rail corridor<br>SPC has proposed the ILC as described in Chapter 4 of<br>the EA.The proposed use of the site for various logistics<br>operations is considered a 'value added' best practice<br>model for the exchange of containers from the Port to<br>local areas in an optimally efficient solution which<br>provides large environmentally beneficial outcomes. | 447         | DoP Submission No 315,158 |
| Socio Economic | I have two students in my household who are finding it<br>extremely difficult to study and even more difficult to sleep.<br>This makes it more difficult as we reside very close to an<br>intersection and have to deal with the sound of brakes and<br>skids.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Existing noise conditions are reviewed in Chapter 11 of<br>the EA Report. There will be no perceptible increase in<br>road noise levels due to the ILC generated traffic<br>volumes.<br>The Local Area Traffic Management Plan will ensure<br>that trucks do not have access to residential streets in<br>the surrounding area.                                                                                                                                                                                                                                                                                                                                                                                                                  | 829         | DoP Submission No 245     |

| Socio Economic | Anybody listening to the arguments on both sides will<br>understand this proposal is a disaster for not just Strathfield<br>residents but Bankstown, Canterbury and many other local<br>areas will be forced out of their neighbourhoods. People<br>will be forced to move away from the traffic snarls, rail noise<br>and railway yard lights, lighting the sky throughout the<br>night.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Traffic, noise and light spill are documented in Chapters 7, 11 and 16 of the EA Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 828               | DoP Submission No 182     |
| Socio Economic | We are particularly concerned about inconvenience and delays for funeral and cemetery traffic that will result from the ILC Enfield.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The impacts of traffic movements on Rookwood<br>Cemetery have been addressed elsewhere. They would<br>be considered further during preparation of the Local<br>Area Traffic Management Plan.                                                                                                                                                                                                                                                                                                                                                                     | 790               | DoP Submission No 137     |
| Socio Economic | There will certainly be disruption to existing businesses<br>during construction phase and some means of mitigating<br>that disruption and the consequent loss of business needs<br>to be considered either by way of condition or by State<br>Government compensation. Additionally there is concern<br>about the future of local businesses once site operations<br>commence especially along the northern end of Cosgrove<br>Rd and in Norfolk Rd east, all of whom are heavily<br>dependent upon on-street parking, should a future local<br>area traffic management plan ban on street parking.<br>Employment. Given the demographic profile of Strathfield<br>residents, it is unlikely that a great many job opportunities<br>will be opened up by the presence of an intermodal<br>terminal for locals. Further, employment is more likely to be<br>of a relocational nature than new jobs created. Suggestion<br>of local economic benefit on the grounds of employment<br>generation is specious.<br>Residents perception of industrial usage/ rail v road. The<br>statement that "most residents" however prefer more<br>railway use regardless of how much they are affected by<br>rail noise or road traffic "is strongly contested. (Stoltznow)<br>and such a dubious response would be highly dependent<br>on the question asked.<br>Positive v negative impacts. There are no recognizable<br>positive impacts from this proposal for local residents real<br>or perceived. Economic benefits may be achieved on a<br>broader regional scale, but these can never<br>counterbalance the local disbenefits. | Further consideration of the potential for impacts on<br>local businesses during the construction phase would<br>be undertaken during preparation of the Construction<br>Traffic Management Plans.<br>Parking issues, access and safety would be considered<br>during preparation of the Local Area Traffic<br>Management Plan for operation. There is no proposal in<br>the EA to change the current parking arrangements on<br>any local streets.<br>Further details of job creation opportunities are provided<br>in section 4.11 of the EA Report.<br>Noted. | 817               | DoP Submission No 120,181 |
| Socio Economic | Many of our neighbours also agree that having the proposed Centre at Enfield will have a negative impact on our community.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 792               | DoP Submission No 116     |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                            | ID          |                       |
| Socio Economic | The increase of truck traffic on Liverpool Rd will discourage<br>residents from using these shops or services. It should be<br>noted that the service stations on Liverpool Road are some<br>of the few service stations still in existence in Strathfield<br>Municipality.<br>Urban consolidation has resulted in the redevelopment of<br>many service stations into medium density residential<br>development. Urban consolidation which is primarily                                                                                                                                                                                                                        | An increase in workforce in the area may also increase<br>the use of local shops and services. These issues would<br>be considered during preparation of the Local Area<br>Traffic Management Plan.<br>Noted.                                                                              | 31          | DoP Submission No 136 |
|                | focused on increasing residential dwellings, can result in<br>the reduction of commerce and industry, which provide<br>services and employment to the local and regional<br>community.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                            |             |                       |
|                | Has any consideration been given to the impact of a substantial increase of heavy vehicle) traffic to these businesses(on Cosgrove Rd)? With increased traffic, there will inevitably be a demand for on street parking on Cosgrove Road to be abolished?                                                                                                                                                                                                                                                                                                                                                                                                                      | I he impact on local businesses is considered in Chapter<br>17. Traffic and parking issues are to be further<br>considered during detailed design.                                                                                                                                         |             |                       |
|                | The FIAB report [Recommendation 3] states 'participation<br>from the private sector be sought ? for the [Enfield] site's<br>development and the terminal's ongoing operation'. While<br>this does not / state that the site may be sold to private<br>interests, there is some concern about whether the site will<br>continue to be government operated and managed. If<br>future ownership and management of the site is not<br>maintained in government control, assurances about future<br>use may be irrelevant. Since Sydney Airport was<br>privatised, use of the site is constantly intensifying with<br>local councils and residents fighting against site            | Private companies are expected to participate in the<br>construction and future operation of leases within the<br>site which will be retained in SPC ownership and<br>management. The future of the light industrial<br>/commercial area along the eastern edge of the site is<br>unknown. |             |                       |
|                | intensification and proposed developments. It should be<br>noted the original Port Enfield proposals in 2002-2003<br>involved capacity of 500,000 TEU per annum as opposed<br>to the 300,000 TEU proposed in 2006.<br>However, limits can be varied and is there any genuine<br>guarantee that limits on rail transport movements will not<br>be increased, particularly if site ownership is privatised or<br>management transferred to private interests?                                                                                                                                                                                                                    | The operation of the ILC has been designed to be<br>constrained to 300,000 TEU throughput, through the<br>intermodal logistics terminal (refer Chapter4 of the EA<br>Report)                                                                                                               |             |                       |
|                | The Environmental Assessment claims that the proposed<br>ILC will create 840 direct and indirect jobs during<br>construction and further 850 direct and indirect jobs during<br>operation. It could be argued that other uses of this site eg<br>development of commercial or business A centres would<br>also create employment. It could be assumed that most<br>jobs 'created' would involving shifting existing work from<br>other sites eg Port Botany, otherwise the additional of<br>labour in handling the transfer and management of goods<br>at Enfield would add substantially to the overall cost of<br>transportation. It should be noted that the development at | Noted.                                                                                                                                                                                                                                                                                     |             |                       |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Response                                                                                                                                                                                       | Stakeholder | Name                      |

|                | Rhodes Peninsula is creating at least 1500 office jobs, 850 retail jobs and 3000 dwellings on'} a site of 43 hectares. In comparison, the Enfield site is 60 hectares-"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                |             |                           |
| Socio Economic | We are aware that a number of businesses in the area<br>have already moved or are planning to relocate to the<br>newly opened M7 corridor to get better access to roads and<br>trains in a less congested environment. They are leaving<br>because the area around Enfield is heavily congested by<br>traffic that limits the efficiency of their businesses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Noted. Businesses relevant to the freight handling<br>activities will remain near the area in which they do<br>business. The catchment area for the ILC is inner and<br>middle western Sydney. | 447         | DoP Submission No 315,158 |
| Socio Economic | Much more than the \$30 million for the current centre<br>needs to be invested in getting a better utility of the land.<br>It causes time and money loss for transport companies and<br>other people/services utilizing other roads connected to the<br>facility.<br>The \$165 million benefit (including multiplier effects) to the<br>local economy is a one-off event over the period of the time<br>of construction.<br>In summary, more capital needs to be injected for<br>infrastructure surrounding the proposed facility. This<br>infrastructure surrounding the proposed facility. This<br>infrastructure will ensure (1) better utilize the land of the<br>proposed facility (2) improve the economics to transport<br>providers to and from the facility - (a)Less fuel used in<br>idling, starting/stopping of trucks -hence savings (b) Less<br>time idling for truck drivers and/or transport providers -<br>saving time = saving money © Less particulants are<br>generated by the idling starting/stopping of trucks — health<br>effects and also economic effects of residents/workers in<br>surrounding areas - better simulation studies need to be<br>done on these points (1), (2) and (3). It is better to use<br>semis and b-doubles rather than many trucks.<br>As an alternative to increasing infrastructure, privatising<br>and subdividing the land into light industrial factory units<br>would generate more money one-off for the state and<br>provide recurrent economic benefit to the local economy,<br>the state and the country improving the balance of<br>payments rather than encouraging of importing of goods | Noted.                                                                                                                                                                                         | 814         | DoP Submission No 135     |
| Socio Economic | that the proposed project will do.<br>Who will pay when residents get sick form gross<br>overdevelopment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Impacts in relation to health and wellbeing are discussed in EA Report Chapter 17.                                                                                                             | 798         | DoP Submission No 174     |

|                   |                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                    | ID          |                           |
| Tarpaulin Factory | It is not believed that the heritage items on the site are<br>highly valued by the local community, in fact the dilapidated<br>tarpaulin factory is regarded as an eyesore.<br>Notwithstanding, there is some merit in relocating items of<br>inherent interest and/or creating from them some outdoor<br>museum depicting the railway history of the site.                         | SPC would consult further with the community about the future uses of the community and ecological area and the tarpaulin factory. | 817         | DoP Submission No 120,181 |
| Tarpaulin Factory | The Tarpaulin Factory on Cosgrove Road is in a deteriorated condition [see photographs]. /<br>This is not the original site of this building as the factory was relocated and reassembled to the site on Cosgrove Road. There are concerns regarding the deteriorated state of this item and the cost of its restoration and whether there are funds available for its maintenance. | SPC would consult further with the community about the future uses of the community and ecological area and the tarpaulin factory. | 31          | DoP Submission No 136     |
| Tarpaulin Factory | Good to see a museum or indoor sport in the Tarpaulin<br>Factory to retain history of this large important site.                                                                                                                                                                                                                                                                    | SPC would consult further with the community about the future uses of the community and ecological area and the tarpaulin factory. | 597         | DoP Submission No 21      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Stakeholder | Name                    |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------------------|
| Traffic        | I don't know how anyone in our position would feel to have<br>excess trucks passing our home 24 hours a day, 7 days a<br>week causing further fumes, noise pollution and risk to our<br>families. Dramatic increases in the number of trucks along<br>our roads and rail to and from the site as under the<br>proposal will result in more traffic, more pollution and more<br>noise, increased risk of road accidents and increased<br>health risks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | ILC operation traffic impacts have been modelled,<br>further details are provided in EA Report Chapter 7.<br>Trucks would be prevented from using residential<br>streets through the Local Area Traffic Management<br>Plan which will be prepared with safety the key<br>consideration. Crash data was reviewed during<br>preparation of the EA report. Further details are<br>contained in EA Report Chapter 7 and Appendix B.<br>Noise, air quality and potential impacts on health and<br>wellbeing are considered in EA Report Chapters 11,12<br>and 17. Construction and Operation Environment<br>Management Plans would be implemented to manage<br>identified impacts.    | 681         | DoP Submission No 94    |
| Traffic        | One has to consider the impact of such an enormous<br>number of trucks on the roads around the logistics centre-<br>in particular, Liverpool Rd, Centennial Drive, Homebush<br>bay Drive, Roberts Rd and other related areas. Two<br>matters are of concern here.<br>Firstly there is the actual maintenance of roads with the<br>increased heavy traffic. The costs of additional repairs over<br>a considerable area of roadway must be considered. In<br>addition, it must be remembered that roads such as<br>Liverpool Rd take a huge amount of work day traffic to the<br>south west of Sydney, as people travel to and from<br>employment and schools.<br>Roads such as Centennial Drive and Homebush Bay Drive<br>take a similar amount of traffic from the south and north of<br>the city and vice versa. Clogging these roads with this<br>volume of additional traffic will cause major problems as<br>employees seek to travel to work each day. | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Trucks<br>would be prevented from using residential streets<br>through the Local Area Traffic Management Plan which<br>will be prepared with safety the key consideration.<br>Traffic generation from the ILC will result in less than<br>1% increase in overall traffic in the area. The<br>contribution of this to road maintenance requirements<br>would be small.<br>Road congestion was assessed as part of the traffic<br>modelling and the relative contribution to this from the<br>ILC would be very minor. | 626         | DoP Submission No 36    |
| Traffic        | We already have to put up with the Boral Concrete plant,<br>the Boral Asphalt plant and Finemores trucking company,<br>all located on Roberts Rd. Do we really need '75% of truck<br>movements would be via Robert Rd and Wentworth St<br>intersection' or 'a weekday average of a total of 1160<br>vehicle movements per day on the roads' as quoted form<br>the SPC newsletter dated 3/1/2006, if this proposal were to<br>go ahead. I don't think so.<br>Roberts Rd already is a major road leading south to King<br>Georges Road and north to the Hume hwy. With the<br>aforementioned industrial sites and normal traffic, this road<br>is already chock a block with constant truck movements.<br>It will be almost impossible with all the extra truck<br>movements for residents to be able to gain access onto<br>Roberts Rd.                                                                                                                       | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>increases from the ILC operations on Roberts Rd will be<br>minor and congestion on that road will not be affected<br>by the proposal.                                                                                                                                                                                                                                                                                                                                                                     | 630         | DoP Submission No 39,98 |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Stakeholder<br>ID | Name                 |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|----------------------|
| Traffic        | The building of the ILC is substantial and will result in a<br>large increase in semi trailer truck movements in the<br>Enfield area. Since the Enfield and surrounding areas are<br>predominantly residential, this will result in a number of<br>detrimental effects including, noise pollution air pollution<br>and a risk to local pedestrians.<br>Our local roads are already filled with traffic. The main<br>roads in the area, the M5, Centenary Drive, and King<br>Georges Rd are already congested and very little public<br>transport infrastructure has been added to alleviate this<br>problem.<br>It doesn't make sense to add to this problem by building an<br>Intermodal, which due to lack of road infrastructure will<br>probably not be able to run efficiently. | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan which would be prepared with due<br>consideration for pedestrian safety. Trucks would be<br>prevented from accessing residential streets.<br>Noise, air quality and potential impacts on health and<br>wellbeing are considered in EA Report Chapters 11,12<br>and 17. Impacts on air and noise from the operation of<br>the site are acceptable within relevant guidelines and<br>should have no implications for public health.<br>Construction and Operation Environment Management<br>Plans would be implemented to manage potential<br>impacts. | 631               | DoP Submission No 42 |
| Traffic        | Concerned about the traffic flow. We are already fully congested with pollution from heavy traffic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan which would be prepared with due<br>consideration for pedestrian safety. | Traffic        | The massive number of truck movements in and out of the terminal, the manoeuvring of the trucks inside the terminal and the inevitable queues of trucks will pollute even more what is essentially a residential area that has a larger than usual number of schools in it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Existing traffic issues have been reviewed and ILC operation traffic impacts have been modelled, further details are provided in EA Report Chapter 7. Traffic management measures during operation would be implemented through the Local Area Traffic                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 649               | DoP Submission No 65 |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Management Plan which would be prepared with due consideration of the location of schools and pedestrian safety. Trucks would be prevented from accessing residential streets.                                                                                                                                                                                                                                                                                                                                                                                                              |             |                      |
| Traffic        | NoPE continues to oppose plans for an intermodal terminal<br>at Enfield because we believe that the local and regional<br>roads, some already acknowledged by the RTA to be at<br>saturation, will not cope with the levels of road traffic<br>proposed here, no matter how many millions of taxpayers<br>dollars that might be thrown at "upgrades".                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Existing traffic issues have been reviewed and ILC operation traffic impacts have been modelled, further details are provided in EA Report Chapter 7. Traffic management measures during operation would be implemented through the Local Area Traffic Management Plan which would be prepared with due consideration for pedestrian safety. Trucks would be prevented from accessing residential streets.                                                                                                                                                                                  | 30          | DoP Submission No 93 |
|                | We also believe that in order to maximise efficiency in the transport chain containers should stay on trains until they are much closer to their final destinations mostly the industrial west and south west of Sydney.<br>Although the proponent claims that the proposed Enfield Intermodal Logistics Centre is now smaller (300,000 TEUs compared to 500,000 TEUs in the 2001 Port Enfield proposal), its impacts with regards to operational impacts and associated road and rail traffic would not be reduced, but in our opinion, would be greater because of the more extensive and intensive use of the site. This would result in greater truck numbers than the previous Port Enfield proposal which was rejected because "the scale and traffic impacts of Enfield alone make the current proposal unacceptable." | Alternative sites are considered in Chapter 3 of the EA<br>Report. The site at Enfield is considered to be the most<br>suitable site to service the inner and middle western<br>areas of the Sydney market, given the area available,<br>its location in an industrial area and its direct connection<br>to Port Botany by a dedicated rail freight line<br>Details of the proposed site operations are provided in<br>EA Report Chapter 4. The truck numbers are outlined<br>here and in EA Report Chapter 7 – Traffic and are able<br>to be accommodated by the surrounding road network. |             |                      |
|                | The Hon Milton Morris AO February 2003<br>introductory Letter to Minister Scully).<br>We believe that the only reason Enfield is being considered<br>again is because the 2005 Planning Reform legislation<br>gives a mechanism by which this development can<br>rammed through with scant disregard for the impacts that<br>this development will have on the local area, and indeed<br>the region.<br>We believe that the present proposal for the Enfield<br>intermodal Logistics Centre at Enfield should be rejected<br>for the same reasons as the previous proposals, that is the<br>scale of this development and the traffic impacts are<br>unacceptable in what is an essentially residential area,<br>which cannot be isolated from or shielded from these<br>impacts.                                             | The proposal is to be considered under Part 3A of the EP&A Act. An independent panel has been appointed too assess the project.<br>Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |                      |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ID          |                      |
| Traffic        | As you know, traffic at Roberts Road and Hume Highway<br>(Liverpool Road) are running at full capacity specially<br>during business hours (06.00 hrs onwards) and there are<br>no rooms for any additional traffic (trucks and semi trailers)<br>to add on to these two roads.<br>- We are really concerned that extra traffic generated by the<br>Logistic centre will spill into the residential areas of<br>surrounding suburbs<br>- dramatic increases in the number of trucks (an extra 900<br>semi-trailers/day) going along our roads and rail to and<br>around from the site as under the proposal will result in<br>more traffic, more pollution, more noise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. The<br>increase in truck numbers on these roads due to the ILC<br>is less than 1%. Traffic management measures during<br>operation would be implemented through the Local<br>Area Traffic Management Plan which would be<br>prepared with due consideration of local land use and<br>pedestrian safety. Trucks would be prevented from<br>accessing residential streets.<br>Noise, air quality and potential impacts on health and<br>wellbeing are considered in EA Report Chapters 11,12<br>and 17. Impacts on air and noise from the operation of<br>the site are acceptable within relevant guidelines and<br>should have no implications for public health.<br>Construction and Operation Environment Management<br>Plans would be implemented to manage any identified<br>impacts.                                     | 107         | DoP Submission No 68 |
| Traffic        | The increase in traffic along Roberts Rd since the completion of the M4 &M5 motorways has been 110% and the impact it has had on entering and leaving ones home to access the road has been enormous. I am informed through the project Newsletter that the volume of large trucks is expected to be approx 1160 vehicles per day. It is nothing for residents presently wishing to depart their homes by car to wait up to 2 hours during peak periods to be able to exit their driveways. The traffic flow now causes bedlam and mayhem- the future if this terminal is approved is a matter of grave concern. I and my neighbours have been blasted with car and truck horns when we indicate that we wish to drive into our driveway!! We want a solution to the present problems of traffic flow through Roberts Rd; not have the present problems exacerbated by the large trucks travelling the Road if the terminal is approved. I am very concerned with this proposal in particular the increase in traffic flow which will only add to the present problems and the increased noise levels associated with such a terminal being built in such a heavily populated housing environment | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>generation for m the ILC will result in less than 1%<br>increase in overall traffic in the area. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan which would be prepared with due<br>consideration of local land use, access and pedestrian<br>safety. Trucks would be prevented from accessing<br>residential streets.<br>Noise, air quality and potential impacts on health and<br>wellbeing are considered in EA report Chapters 11,12<br>and 17. Impacts on air and noise from the operation of<br>the site are acceptable within relevant guidelines and<br>should have no implications for public health.<br>Construction and Operation Environment Management<br>Plans would be implemented to manage any identified<br>impacts. | 623         | DoP Submission No 32 |
| Traffic        | Containers will be moved by rail from Port Botany to<br>Enfield, transferred then trucked within the central inner<br>west region. The Centre would be in operation for 24 hours,<br>7 days a week. The number of containers will increase from<br>the current 18/day to 110-120 per day. This will result in<br>more than 1,000 large truck movements per day and<br>thousands smaller trucks and continuous rail movements                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Existing traffic issues have been reviewed and ILC operation traffic impacts have been modelled, further details are provided in EA Report Chapter 7. Total truck movements into and out of the ILC will be about 1160 per day. Rail movements to and from the ILC will total no more than 20.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 686         | DoP Submission No 73 |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                   | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Stakeholder<br>ID | Name                              |

|                | 24 hours/day. These operations will result in considerably<br>increased road and rail traffic<br>At the least there should be a detailed independent traffic<br>management study which assesses how all trucking traffic<br>will get to and from Enfield and how impacts will be<br>mitigated from a community perspective | The traffic study undertaken for the EA assessed truck<br>movements and impacts. It concluded, amongst other<br>things, that traffic management measures during<br>operation would be implemented through the Local<br>Area Traffic Management Plan which would be<br>prepared with due consideration of local land use,<br>access and pedestrian safety. Trucks would be<br>prevented from accessing residential streets.<br>Further details would be provided during detailed<br>design and traffic routes used by trucks managed<br>through the Local Area Traffic Management Plan                                                                                                                                                   |                   |                                   |
| Traffic        | We are already subject to a lot of traffic                                                                                                                                                                                                                                                                                 | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 706               | DoP Submission No 77              |
| Traffic        | We believe that if the construction of the terminal is to go<br>ahead, it would cause and increase in traffic condition.<br>Not to mention the change in traffic conditions once the<br>freight arrives and is then being unloaded onto trucks and<br>then transported to destination.                                     | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan which would be prepared with due<br>consideration of local land use, access and pedestrian<br>safety. Trucks would be prevented from accessing<br>residential streets.                                                                                                                                                                                                                                                                            | 711               | DoP Submission No 69              |
| Traffic        | Dramatic increases in the number of trucks going along our<br>roads and rail to and from the site as under the proposal will<br>result in more traffic, more pollution more noise , increased<br>risk of road accidents and increased health risks.                                                                        | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Rail traffic<br>in EA Report Chapter 8. Traffic management measures<br>during operation would be implemented through the<br>Local Area Traffic Management Plan which would be<br>prepared with due consideration of local land use and<br>pedestrian safety. Trucks would be prevented from<br>accessing residential streets.<br>Noise, air quality and potential impacts on health and<br>wellbeing are considered in EA Report Chapters 11,12<br>and 17. Construction and Operation Environment<br>Management Plans would be implemented to manage<br>identified impacts. | 713               | DoP Submission No 138,140,143,119 |
| Traffic        | The significant increase in traffic numbers in excess of 1,000 truck movements would increase noise to the Greenacre area and affect resident's quality of life.<br>The traffic flow report indicates that there would be a small                                                                                          | Noise, air quality and potential impacts on health and<br>wellbeing are considered in EA Report Chapters 11,12<br>and 17. Construction and Operation Environment<br>Management Plans would be implemented to manage<br>identified impacts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 726               | DoP Submission No 12,178,172      |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | •                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | ID          |                           |
|                | number of container trucks using Boronia Road Greenacre<br>and there are no weight or time limits attached to the travel.<br>This would indicate that any size container truck would be<br>allowed to use Boronia Rd at any time of the day or night.<br>The number of container trucks using Boronia Rd as<br>advised in the Traffic Report is only an estimate and I<br>believe the number is inaccurate. I believe the number<br>would be higher as Boronia Rd, which becomes Juno Pde<br>is a road that cuts the Hume Hwy and Roberts Rd and<br>would be used by trucks as a possible short cut. The traffic<br>flow information has not been properly analysed especially<br>in relation to the increased impact to Boronia Rd residents<br>and the potential increase in traffic numbers.<br>Boronia Rd is not a suitable road for container traffic.<br>Boronia Rd is considered a residential road as there are<br>residential dwellings along the majority of Boronia Rd. The<br>road surface of Boronia Rd would not be suitable to carry<br>heavy vehicles and there have not been any noise<br>reduction measures placed by the Council to reduce traffic<br>volumes or any proposals by the State Government to<br>reduce noise.<br>I understand that Bankstown Council also objects to this<br>proposal and agrees that Boronia Rd should also be<br>treated as a residential road and would not be suitable as a<br>State road fro trucks due to the high number of residents<br>residing on Boronia Rd.<br>A specific statement advising no access to Boronia<br>Rd/Juno Pde Greenacre for container trucks from Roberts<br>Rd or form the Hume Hwy. This will force container trucks<br>to use the designated major arterial roads- Hume Hwy and<br>Bebort Rd. | Traffic would be managed through the Local Area<br>Traffic Management Plan. Further consideration of<br>these issues would be undertaken during preparation of<br>the Local Area Traffic Management Plan.<br>Boronia Road / Juno Parade is a State Road, and is<br>currently approved for use by B-Double trucks. There is<br>no mechanism to prevent any trucks from using this<br>route. However the EA, which takes into account the<br>origin/destination of ILC traffic, indicates only 6 trucks<br>per hour from the ILC (2-way) would use Juno Parade /<br>Boronia Road during the morning and afternoon peak<br>periods. The bulk of ILC trucks would use Roberts<br>Road to access the M4 or M5 Motorways. A Local Area<br>Traffic Management Plan would be implemented during<br>operation to ensure trucks avoid local/ residential<br>streets.<br>We acknowledge that Juno Parade and Boronia Road<br>are different in character to other State Roads such as<br>Roberts Road and the Hume Highway. However, any<br>changes to Juno Parade / Boronia Road's, State Road<br>and approved B-Double route status is a matter<br>between Council and the RTA. |             |                           |
| Traffic        | Peg 6 of your newsletter states that there will be a<br>lessening of traffic between Port Botany and the inner west.<br>However this merely means an increase in traffic in and<br>around Enfield and all its surrounding suburbs. You will not<br>be achieving a lessening of traffic in the Sydney basin as<br>such, you will merely be relocating the traffic problem from<br>the Botany environs to the Enfield environs/ Relocating a<br>problem is no substitute for curing a problem.<br>We also note from p6 of the newsletter that only one third of<br>new traffic generated by the intermodal will be light trucks.<br>Therefore two thirds of the new traffic will be heavy duty<br>trucks (e.g. semi trailers) which will exacerbate existing<br>problems along Liverpool Rd and Centenary Drive.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | The proposal would reduce the distance that freight is<br>transported via road. The EA report quantified the<br>reduction in truck traffic due to the freight by rail<br>proposal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 736         | DoP Submission No 129,130 |

| Traffic        | I object to the proposal to build a port at Enfield because of traffic                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 583         | DoP Submission No 1  |
| Traffic        | Hume highway is already congested by trucks from the<br>Sydney Markets, POST vehicles, traffic from Centennial<br>Drive, Roberts Road and Cosgrove Road and Rookwood<br>Cemetery. Accidents and delays on the Highway force<br>traffic into residential streets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The traffic volumes generated by the proposed ILC are<br>low. There is no reason why they alone would cause<br>traffic diversion into residential streets.                                                                                                                                                                                                                                                                                                                                                                                                                         | 671         | DoP Submission No 76 |
| Traffic        | Since the time (6-7) years ago that I came to live in Greenacre the traffic has increased 300%.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 594         | DoP Submission No 17 |
| Traffic        | It is going to create a lot of traffic as the traffic is already bad<br>in that area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Noted. Existing traffic issues have been reviewed and<br>ILC operation traffic impacts have been modelled,<br>further details are provided in EA Report Chapter 7.<br>Noise, air quality and potential impacts on health and<br>wellbeing are considered in EA Report Chapters 11,12<br>and 17. Impacts on air and noise from the operation of<br>the site are acceptable within relevant guidelines and<br>should have no implications for public health.<br>Construction and Operation Environment Management<br>Plans would be implemented to manage any identified<br>impacts. | 584         | DoP Submission No 2  |
| Traffic        | Already there is too much traffic in and around the<br>proposed area and leeching into the area as more and<br>more people and industries are crammed into our suburb<br>and surrounds/ No thank you we do not want that sort of<br>traffic, what we have is already overbearing and not<br>wanted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Existing traffic issues have been reviewed and ILC operation traffic impacts have been modelled, further details are provided in EA Report Chapter 7. |                | have the transport coming from interstate.<br>Leave the computer out of working out the problems. Send<br>out the trained staff to spend a long period of time seeing<br>for themselves the long period of blockage that will be<br>continuous occurring.<br>Very excessive planning is needed for the movement of<br>traffic or the William St fiasco will be only a pup with all the<br>commercial traffic in such a every day movement of traffic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The operation of this intersection now and in the future<br>has been discussed with RTA staff responsible for the<br>operation of traffic signals.<br>Further consideration of these issues would be<br>undertaken during preparation of the Local Area Traffic<br>Management Plan.                                                                                                                                                                          |             |                      |
| Traffic        | My family has lived at our address since 1961 and we have<br>watched our quiet street grow into a rather noisy area over<br>the years from increasing traffic which uses Hedges Ave<br>and adjoining streets to by pass Centenary Drive when it<br>becomes choked with traffic.<br>In view of the extra traffic from the proposal. Will you be<br>able to stop extra traffic from continuing onto Hedges Ave<br>etc as I believe the extra trucks will find it more difficult to<br>converge onto Centenary Drive.<br>Future development will bring extra traffic.<br>Trucks leaving Cosgrove Rd will move along the Hume<br>Hwy to Centenary Drive which is already showing signs of<br>congestion during morning and evening peak. Hour When<br>an accident occurs, which frequently causes traffic jams,<br>traffic uses Hedges Ave as a detour and we have seen<br>large trucks negotiating the roundabout and bridge at Cave<br>Rd/hedges Ave. | Traffic management measures during operation would<br>be implemented through the Local Area Traffic<br>Management Plan. Trucks would be prevented from<br>accessing residential streets.<br>The traffic volumes generated by the proposed ILC are<br>low. There is no reason why they alone would cause<br>traffic diversion into residential streets.<br>Noted. See comment above in ID 586.                                                                | 587         | DoP Submission No 5  |
| Traffic        | Concern about increase in traffic.<br>Does not believe that someone would think of locating a<br>port with such a high volume of traffic activity right in the<br>middle of a suburban area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Noted. The area is zoned for railway purposes and surrounding land uses are industrial.                                                                                                                                                                                                                                                                                                                                                                      | 588         | DoP Submission No 7  |
| Traffic        | Project will disrupt traffic                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan which would be prepared with due<br>consideration of local land use, access and pedestrian<br>safety. Trucks would be prevented from accessing<br>residential streets. | 589         | DoP Submission No 9  |
| Traffic        | I am objecting to the proposal because of traffic movements                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 590         | DoP Submission No 11 |
| Traffic        | Effective truck surveillance is important and should include<br>more than just video cameras as the truck drivers using<br>Norfolk Rd exit/entry right now use the road as if it is a drag                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan which would be prepared with due                                                                                                                                                                                                                                                                                                              | 539         | DoP Submission No 35 |

|                | An alternative exit/entry to the ILC should be considered,<br>the proposed Norfolk Rd exit at Roberts Rd is a poor choice<br>for many reasons. Cost should not be used as an excuse<br>for an alternative.                                                                                                                                                                      | Alternatives were considered during preparation of the road traffic assessment in EA Report Chapter 7 and Appendix B.                                                                                                                                                                                                                                                                                    |             |                      |
|                | One final point that last newsletter that went out to residents has a serious error. It reports of an intersection of Wentworth St and Roberts Rd, this is a mistake the intersection does not exist.                                                                                                                                                                           | Noted. Wentworth Street turns into Norfolk Road and therefore have been assumed as the same road.                                                                                                                                                                                                                                                                                                        |             |                      |
| Traffic        | A lot more heavy vehicles will come into the area which already has a heavy traffic load                                                                                                                                                                                                                                                                                        | Existing traffic issues have been reviewed and ILC operation traffic impacts have been modelled, further details are provided in EA Report Chapter 7. Traffic generation from the ILC will result in less than 1% increase in overall traffic in the area. Traffic management measures during operation would be implemented through the Local Area Traffic Management Plan.                             | 592         | DoP Submission No 15 |
| Traffic        | Traffic congestion in the local area with the great increase<br>in trucks. Roberts Rd is increasing in volume every week<br>without getting extra from a freight Terminal                                                                                                                                                                                                       | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>generation from the ILC will result in less than 1%<br>increase in overall traffic in the area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| As I live on Greenacre's thoroughfare, I have observed that<br>each day the already congested is becoming heavily<br>choked 24/7. The completion of the Terminal will no doubt<br>increase traffic volume, particularly heavy traffic volume up<br>and down our streets. Roads will deteriorate                                                                                                                                                                                                                                                                                                                                                                    | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>generation from the ILC will result in less than 1%<br>increase in overall traffic in the area. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 598                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | DoP Submission No 22                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| I also believe that this proposal will increase the number of trucks will pass my home.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan. Through this trucks would be<br>prevented from accessing residential streets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 618                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| The building of the ILC is substantial and will result in a large increase in semi-trailer truck movement in the Enfield area. Since the Enfield and surrounding areas are predominantly residential this will result in a number of detrimental effects. Our local roads are already filled with traffic. The main roads in this area, the M5, Centenary Drive and King Georges Rd are already congested and very little public transport infrastructure has been added to alleviate this problem. It doesn't make sense to add to this problem by building an Intermodal, which due to lack of road infrastructure will probably not be able to run efficiently. | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>generation from the ILC will result in less than 1%<br>increase in overall traffic in the area. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan which would be prepared with due<br>consideration of local land use, access and pedestrian<br>safety. Trucks would be prevented from accessing<br>residential streets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 786                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | DoP Submission No 106                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Comments           been using Amy St, Regents Park, the shopping centre of<br>the suburb to negotiate between Rookwood Rd, over the<br>train line at the Regents Park railway station, to access<br>Park Rd leading west to Sefton or north to Auburn and<br>beyond.           Traffic banks up to a standstill each way at am and pm<br>peaks.         The completion or north to Auburn and pm<br>peaks.           As I live on Greenacre's thoroughfare, I have observed that<br>each day the already congested is becoming heavily<br>choked 24/7. The completion of the Terminal will no doubt<br>increase traffic volume, particularly heavy traffic volume up<br>and down our streets. Roads will deteriorate           I also believe that this proposal will increase the number of<br>trucks will pass my home.           Concerned about the traffic flow. We are already fully<br>congested with pollution from heavy traffic.           Roberts Rd is an "EXPRESS" not a road for more trucks<br>that fly past the homes creating noise dirt and dust.           The building of the ILC is substantial and will result in a<br>large increase in semi-trailer truck movement in the Enfield<br>area. Since the Enfield and surrounding areas are<br>predominantly residential this will result in a number of<br>detrimental effects. Our local roads are already filled with<br>traffic. The main roads in this area, the M5, Centenary<br>Drive and King Georges Rd are already congested and<br>very little public transport infrastructure has been added to<br>alleviate this problem. It doesn't make sense to add to this<br>problem by building an Intermodal, which due to lack of<br>road infrastructure will probably not be able to run<br>efficiently           Since local roads are already congested, there is a concern<br>that car drivers will increasingly use residential roads to<br>avoid the traffic.  < | Comments         Response           been using Amy St, Regents Park, the shopping centre of<br>the suburb to negotiate between Rockwood Rd, over the<br>train line at the Regents Park railway station, to access<br>Park Rd leading west to Sefton or north to Auburn and<br>beyond.         Station. Traffic volumes in this area attributable to the<br>LC will be small.           Traffic banks up to a standstill each way at am and pm<br>peaks.         Station. Traffic issues have been reviewed and ILC<br>operation traffic impacts have been reviewed and ILC<br>operation traffic impacts have been reviewed and ILC<br>operation traffic impacts have been reviewed and ILC<br>operation traffic intersuit in less than 1%<br>increase traffic volume, particularly heavy traffic volume up<br>and down our streets. |                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                          |             |                           |
| Traffic        | Strathfield has always been a quiet a pleasant residential<br>area and my children have grown up in this wonderful<br>suburb, this logistics centre will create more traffic and<br>congestion on our roads.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Existing traffic issues have been reviewed and ILC operation traffic impacts have been modelled, further details are provided in Chapter 7. Traffic management measures during operation would be implemented through the Local Area Traffic Management Plan. Through this trucks would be prevented from accessing residential streets. | 591         | DoP Submission No 14      |
| Traffic        | For those with any experience of the operation and<br>orientation of the Enfield site and the surrounding road<br>network up to 5km radius and the existing state of the rail<br>line and rolling stock it is clear that infrastructure of all types<br>is currently deficient. This is not just an RTA matter, the<br>infrastructure upgrading needs are much wider and<br>deeper.                                                                                                                                                                                                                                                                                                                                   | Noted.<br>Upgrade of road infrastructure is a matter for the RTA<br>and Councils. Rail issues will be discussed between<br>relevant agencies such as RailCorp, ARTC and DEC.<br>SPC will assist in considering ways of mitigating<br>impacts associated with rail operations in the dedicated<br>freight rail corridor.                  | 817         | DoP Submission No 120,181 |
|                | There appears to be little acknowledgement that roads<br>leading to and from the site, not just in the immediate<br>perimeter, but further afield will be under stress from<br>additional truck movements generated by the proposed<br>development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Existing traffic issues have been reviewed and ILC operation traffic impacts have been modelled, further details are provided in EA Report Chapter 7.                                                                                                                                                                                    |             |                           |
|                | On the site perimeter the following are significant<br>constraint: width of the intersection of Norfolk and Roberts<br>Road the main proposed ingress/egress for B doubles is<br>already inadequate as demonstrated by recent B doubles<br>turning circle trials. Norfolk/Wentworth are the main access<br>routes for small and medium sized businesses and access<br>to these sites will become problematic if in competition with<br>B Doubles from the Enfield site. Turning circles on the<br>corner of the Hume Highway and Cosgrove Road for right<br>turn in from Hume Highway heading east are extremely<br>tight. Conflicts exist for heavy vehicles entering and leaving<br>Gould Street via Hume Highway.  | The ability of B-doubles to negotiate key intersections<br>has been tested subsequent to the submission of the<br>EA documents and confirmed with the RTA.<br>Modifications would be made to the Roberts Road /<br>Norfolk Road intersection to better manage B-Double<br>turning and safety for all intersection users.                 |             |                           |
|                | The EA acknowledges that several critical intersections in<br>the road network are now saturated (Table 4-6 p57 FTWP)<br>or will be by peak operation in 2016. (v2 Final Transport<br>Working paper p8). These include, but are clearly not<br>limited to: Roberts Rd/Juno Pde, King Georges<br>Rd/Punchbowl Rd, Hume Hwy/Roberts Rd/Centenary<br>Drive, Hume H\vyI Coronation Pde, Hume Hwy/Cosgrove<br>Rd ant Centenary Drive/Arthur St.). There is no suggestion<br>as to how this will be managed or its impact on the efficient<br>operation of the terminal. The issue here is that if as<br>suggested the roads are already at capacity and can only<br>get worse. Why would you advocate locating a transport | The ILC can perform adequately in the road network. In<br>the future it is the growth in background traffic affecting<br>the performance of some intersections<br>Most of the ILC trucks will access the site by<br>Roberts/Norfolk which is able to accommodate the level<br>of traffic in agreeance with the RTA assessment.           |             |                           |

|                | terminal in the location that is dependent on efficient<br>network operation to be economically viable? The degree<br>to which the presence of the Intermodal terminal adds to<br>the existing or emerging situation is problematic. Traffic<br>generation figures from the site are contestable and<br>reference is made to Strathfield Council's submission in<br>this, regard. Even the Transport Working Paper admits that<br>it is almost impossible to quantify the number of vehicles to<br>be generated from the site as there are too many variables<br>at work. (p9). Additionally, Local area knowledge suggests<br>that Peak hour traffic generated by the ELC will impact on<br>the journey to work and to local schools not just by heavy<br>vehicles but from movement off employees vehicles.<br>Proposed staffing for the site is 378. At a worst case<br>scenario this may mean at least 700 movements in and out<br>of the site per day Future traffic generating activity around<br>the site is given scant regard. The EA acknowledges that<br>the presence of the intermodal terminal will change land<br>uses over time(VI pI4-10) the best guess estimate would be<br>that the predominant use will become warehousing and<br>freight industry focused ie traffic generating. Such a<br>possibility has not been factored into the modelling.<br>Passing mention is only made that there is no knowledge of<br>any current development applications in the area. The EA<br>states that additional truck activity generated by the<br>Terminal would be concentrated on key arterial roads, yet<br>ignores that to get to them trucks must pass through or<br>adjacent to residential areas egalong Centenary Drive,<br>Hume Hwy Roberts Rd.<br>Further to this, The EA suggests that there is likely to be<br>more truck movement along the Hume to and from<br>Coronation Pde which is heavily residential areas.<br>Further, access issues and priority given to vehicles<br>entering and leaving the site as distinct from existing and<br>future businesses located on streets on the<br>periphery/boundary of the site is of concern. Regulation<br>and enforcement of traffic routes/load restrictions | Most employees at the ILC would work shifts which<br>would mean they are not travelling during the network<br>peak times.<br>Employee trips were factored into the traffic modelling,<br>although most employee movement would occur<br>outside of the wider network peaks.<br>Future traffic generating developments in the area were<br>incorporated in the traffic assessment and modelling<br>through a general increase in background traffic growth.<br>Specific inclusion was also made of a new light<br>industrial area adjacent to the ILC along Cosgrove<br>Road.<br>Roberts Road, Hume Highway and Centenary Drive are<br>key components of Sydney's arterial road network. The<br>use of these roads by ILC traffic is entirely appropriate.<br>Local Area Traffic Management Plans would ensure<br>that residential streets are avoided and trucks remain<br>on arterial roads.<br>The EA indicates that there would be 1-2 ILC trucks that<br>would use the Hume Highway east of Cosgrove Road.<br>However, given the market catchment for the ILC<br>(predominantly west of Enfield) the impact on the Hume<br>Highway (East) would be minimal.<br>SPC is committed to ensuring that ILC operations<br>comply with all relevant regulations and legislation, to<br>minimise the impacts on the local community.<br>In discussion with the RTA, modifications to the Roberts<br>Road / Norfolk Road have been nominated to cater for<br>turning B-Doubles. |                   |      |

|                | Bus route review - re-routing of buses from/to Strathfield,<br>Bankstown and Belmore Station through Cosgrove Rd.<br>This would assist not only future employees but local<br>residents. Strathfield Council has already made<br>representations, thus far unsuccessfully, to improve the<br>North South route of buses for residents south of Liverpool<br>Rd.                                                                                                                                   | Public transport considerations could be further<br>reviewed and consultation undertaken with public<br>transport providers, council and Ministry of Transport.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                   |                       |
|                | RTA to take responsibility for reconstruction and<br>maintenance of Cosgrove Rd, Wentworth Rd north, Norfolk<br>Rd and all streets off same.<br>Cycle route- signalized pedestrian/cycle crossing on<br>Cosgrove Rd at Begnell Field giving access to the Cooks<br>River Cycleway. This would provide not only transport<br>options for employees but benefits to the local community<br>in providing linkages between currently isolated parts of the<br>community to open space and facilities. | RTA and SPC have reached agreement on intersection<br>improvements for Norfolk/Roberts Rd and traffic control<br>measures for Cosgrove egress during peak hours to<br>minimise impacts onto Hume Highway intersection<br>SPC has no plans to create cycle paths                                                                                                                                                                                                                                                                                                                                                                                  |                   |                       |
| Traffic        | The expansion of Port Botany has been estimated to add<br>approximately 2,000 more trucks per day to Sydney's<br>roads. When considered along with plans to dramatically<br>increase the 'footprint' of Sydney Airport, the impact will be<br>immense.                                                                                                                                                                                                                                            | The expansion of Port Botany and the future growth of<br>Sydney Airport have been incorporated into the traffic<br>model (as documented).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 811               | DoP Submission No 125 |
|                | Noise pollution, air pollution and traffic congestion will<br>increase and a whole of Sydney will be affected, including<br>suburbs in the Bankstown Local Government Area where I<br>live.                                                                                                                                                                                                                                                                                                       | Traffic volumes and their consequences will increase<br>over time, regardless of the presence of the ILC. Noise,<br>air quality and potential impacts on health and wellbeing<br>from the ILC are considered in EA Report, Chapters<br>11,12 and 17. Impacts on air and noise from the<br>operation of the site are acceptable within relevant<br>guidelines and should have no implications for public<br>health. Construction and Operation Environment<br>Management Plans would be implemented to manage<br>identified impacts.<br>Trucks would be prevented from accessing residential<br>streets through the Local Area Traffic Management |                   |                       |
|                | The impact of the massive network of inter-modal freight<br>transfer terminals in Botany, Enfield, Moorebank, Minto,<br>Ingleburn and Eastern Creek, which will service the new<br>port, will be felt all over Sydney. Suburban streets will<br>become industrial thoroughfares.                                                                                                                                                                                                                  | Plan.<br>The NSW metropolitan intermodal freight network<br>strategy is confirmed in the FIAB Report. This will<br>contribute to the NSW Government's goal of moving<br>40% of Port Botany containers by rail                                                                                                                                                                                                                                                                                                                                                                                                                                    |                   |                       |
|                | I urge the State Government to reconsider this<br>infrastructure development proposal. I do not want an<br>Inter-modal Logistics Centre in Enfield or the resulting<br>damage to the environment and increase in pollution, traffic<br>congestion and the consequent effect on the health of                                                                                                                                                                                                      | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                   |                       |

| Traffic        | <ul> <li>I have studied the Environmental Impact Statement (EIS) associated with the Intermodal Logistics Centre (ILC) at Enfield and believe the issue of noise and traffic have not been adequately addressed.</li> <li>1160 truck movement between 6am and 5pm would indicate this development should not proceed without significant road network improvements. The reports does not cover new industry being drawn to the area through the opening of the ILC or the additional traffic on Roberts Rd /Centenary Dr upon the opening of the M4 East, which is at full capacity at peak times now. The reports only recommendation is to further investigate network improvements.</li> <li>Upgrade the Cosgrove and Liverpool Road intersection. Liverpool Road travelling east is continually reduced to a single carriageway due to insufficient space for trucks to turn into Cosgrove Road, Gould Street and Braidwood Street. Road network improvements along Roberts Rd Centenary Drive.</li> </ul> | Noted. The noise and traffic impacts identified in the EA that are required to be mitigated, will be addressed in the preparation of Construction and Operation Environmental Management Plans.<br>There would be 1160 truck movements across the 24-hour period, reducing the peak impacts of the ILC. New growth in the local area has been addressed through the inclusion of background traffic growth.<br>Also, the assessment specifically includes a new light industrial development adjacent to the ILC on Cosgrove Road.<br>There are no firm proposals for the M4 East corridor, so it has not been included.<br>Widening of the Hume Highway to 3 lanes eastbound is one recommendation of the EA. This would be required in the future even without the ILC in operation. This has been discussed with the RTA. | 569         | DoP Submission No 131 |
| Traffic        | Just thinking about the truck traffic up and down. There is<br>enough traffic now already but I would like to know if this to<br>be a 24 hour seven day traffic problem, as well?<br>You don't win these applications, other times we had<br>similar traffic objections and they won then. The minister for<br>planning will get his way                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Traffic generation by the ILC will result in less than 1% increase in overall traffic in the area.<br>The Minister for Planning makes the determination on the proposed development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 812         | DoP Submission No 133 |
| Traffic        | It is expected that the number of semi trailers and B<br>doubles will increase up to 1000 per day. The existing<br>arterial roads are already too noisy too busy and too narrow<br>to manage an increase in large vehicles                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 813         | DoP Submission No 176 |
| Traffic        | I don't believe that the logistics centre will generate an extra<br>2% (rounded) of traffic for the current infrastructure -1<br>believe that vehicles moving in and exiting the proposed<br>facility based on current infrastructure will block other traffic<br>not using the facility - particularly Centennial Dr, Roberts<br>Road, Cosgrove Rd and Punchbowl Rd. More detailed<br>modelling/simulation needs to be done.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA Report Chapter 7. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan which would be prepared with due<br>consideration for pedestrian safety. Trucks would be<br>prevented from accessing residential streets.<br>The traffic impacts of the facility for 300,000 TEU have                                                                                                                                                                                                                                                                                                                                  | 814         | DoP Submission No 135 |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                              | ID          |                           |
|                | facility - more simulation studies need to be done on the<br>effects of running the logistics centre on wider roads –<br>particularly widening Cosgrove Rd and Punchbowl Rd. The<br>overhead bridge from Roberts Rd and Norfolk Ave is<br>insufficient if full utility of the land is proposed. Punchbowl<br>Rd needs to be widened - there has been provision for this<br>for over 40 years - check RTA plans. A road and bridge<br>from Punchbowl Road to the Logistics would be needed to<br>fully utilize the land and reduce the particulants.                                                                                                                                                                                                                                                             | been documented in Appendix B of the EA.<br>There are no proposals for road widening and no need<br>for widening to occur.                                                                                                                                                                                                                                                                                                                   |             |                           |
|                | Also funding for the widening of Cosgrove Rd needs to be<br>provided by the State rather than the ratepayers of<br>Strathfield in order to allow a far more smooth traffic flow of<br>b-doubles and trucks. The stopping, starting and idling of<br>trucks causing causes more particulants to be produced<br>and increases the waiting times to enter and exit the facility<br>for the current infrastructure. How Cosgrove Rd will get<br>widened to cope with the extra traffic will have to be<br>decided by the engineers at State and Local Government<br>levels - local businesses along this busy road will need<br>access particularly at peak times. Cosgrove Rd is not wide<br>enough as it is and more simulation studies need to be<br>done for the full utility of the proposed logistics centre. | These works will be required without the ILC being developed and should be discussed between the RTA and Councils.                                                                                                                                                                                                                                                                                                                           |             |                           |
|                | The capital requirements needed to better utilize the land<br>are - (1) widening Cosgrove Rd to handle extra traffic (2)<br>widening Punchbowl Rd with a bridge/path running from<br>Punchbowl Rd into Juno Pde into the proposed project. A<br>simulation study needs to be done in order to validate the<br>construction of this infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | See above comment.                                                                                                                                                                                                                                                                                                                                                                                                                           |             |                           |
| Traffic        | Sydney Ports claims, "there would be a reduction in growth<br>of heavy vehicle traffic on the M5 Motorway, due to a<br>reduction in truck activity from Port Botany to the inner and<br>mid-west of Sydney." (January Project Newsletter, page 6,<br>final dot point.). This is completely misleading. There will be<br>an overall increase in road traffic from Port Botany on the<br>M5, of such a magnitude that the M5 will need<br>amplification.                                                                                                                                                                                                                                                                                                                                                          | There will be a reduction in the growth of heavy<br>vehicles, not an overall reduction. An Intermodal<br>logistics centres would result in a reduction in truck<br>movements to/from Port Botany and Enfield, replaced<br>by containers being carried by train.                                                                                                                                                                              | 447         | DoP Submission No 315,158 |
|                | Other reports we have seen propose the widening of the King Georges Road/Roberts Road/Centennial Drive corridor, to accommodate the forecast increase in containers being transported by road because these arterial routes are already congested to saturation point for most of the day (SMH December 2004).<br>• There will be an overall increase in freight truck movements on these road networks of at least three times more than current numbers. because there will be a                                                                                                                                                                                                                                                                                                                              | There are no known proposals within the State<br>Government to widen this corridor. The increase in<br>throughput at Port Botany would only be possible if the<br>mode share to rail is increased. The Enfield ILC is a key<br>factor in reaching this target.<br>Overall truck numbers on the roads will increase due to<br>increased carriage of goods. This increase will be<br>relatively reduced by transferring goods to rail systems. |             |                           |
|                | three-fold increase in throughput at both Port Botany and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | for transport.                                                                                                                                                                                                                                                                                                                                                                                                                               |             |                           |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Stakeholder<br>ID | Name                  |

|                | Enfield                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                   |                       |
|                | Sydney Port's false claim of a reduction in truck<br>movements puts paid to its further claims that the<br>development will also reduce noise impacts, pollution and<br>greenhouse gas emissions. An increase in truck<br>movements and in train movements means an increase in<br>environmental impacts over what currently exists.<br>The trucks entering and leaving the Enfield facility will not<br>only make a significant impact in the immediate vicinity of<br>the operation, but also across Bankstown and South<br>Western Sydney. As these trucks travel to and from the<br>Enfield terminal they will add further to existing congestion<br>on the Hume Highway, Roberts Road - Centennial Drive<br>and other arterial routes. | Trucks currently move between Port Botany and<br>western Sydney. With the ILC in operation they would<br>travel only between Enfield and western Sydney. This<br>reduction in distance would result in a decrease in<br>vehicle emissions and fuel consumption.<br>A series of mitigation measure are proposed to be<br>developed further during detailed design, and through<br>Construction and Operation Environmental<br>Management Plans.<br>The ILC would increase the proportion of trucks on the<br>Hume Highway and Roberts Road by less than 1%. |                   |                       |
|                | Trucks accessing Enfield will comprise B-doubles carrying<br>full and empty containers, as well as smaller trucks bringing<br>in goods to be packed into containers and delivering<br>unpacked goods. This will also entail many trips by empty<br>trucks because of the difficulty of co-ordinating trips. This<br>will ensure a huge increase in truck activity in the locality<br>that is not acceptable.                                                                                                                                                                                                                                                                                                                                | The on-site warehousing will allow storage of<br>containers and goods, so that co-ordination of trucks is<br>not an issue. A vehicle booking system would be in<br>place to limit the number of trucks at the ILC at any one<br>time, and to minimise empty running. The ILC is<br>expected to operate with a backloading rate of 30% by<br>2016.<br>There is less congestion at night on the road network.                                                                                                                                                |                   |                       |
|                | Add to this the mainly night time traffic volumes from News<br>Ltd, Fairfax, Australia Post Parcels, Weston's Bakery and<br>the Chullora intermodal terminal, etc. With the proposed<br>levy on trucks carrying containers during daylight hours,<br>such vehicles are very likely to operate at night to avoid the<br>levy, adding to the road congestion in the area.                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                   |                       |
|                | It is not indicated how heavy vehicles will be prevented<br>from accessing Cosgrove Road via Punchbowl Road. This<br>can only be achieved by closing, or partially closing,<br>Cosgrove Road at the Southern end. There is nothing to<br>stop heavy vehicles, especially the non-container trucks<br>from crossing Roberts Road at Greenacre and<br>proceeding along Norfolk Road, an entirely residential<br>precinct, nor any means of policing these vehicles to                                                                                                                                                                                                                                                                         | Details relating to how traffic is to be prevented from<br>entering specific roads and residential streets would be<br>determined during development of the Local Area<br>Traffic Management Plan.                                                                                                                                                                                                                                                                                                                                                         |                   |                       |
|                | <ul> <li>enforce adherence to designated routes.</li> <li>It may be possible to restrict container trucks to arterial routes, but it will be much more difficult to restrict smaller trucks, that carry the unpacked goods to and from the containers. Because of main road congestion they will use local residential streets.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                  | The smaller trucks from and to the warehousing on the site will be of the order of 8-10 tonnes, and will be subject to Local Area Traffic Management (LATM) controls in residential streets. We anticipate that most of the smaller trucks would access the ILC via Cosgrove Road where the warehouses are located adjacent to this access point.                                                                                                                                                                                                          |                   |                       |
| Traffic        | Our highest concern is in regard to the proposed<br>development is the increase of traffic, particularly heavy<br>vehicles on roads surrounding the Enfield ILC. We are<br>concerned that increased amounts of heavy vehicles will                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Existing traffic issues have been reviewed and ILC operation traffic impacts have been modelled, further details are provided in EA report Chapter 7. The increase in overall traffic volume on streets in the                                                                                                                                                                                                                                                                                                                                             | 31                | DoP Submission No 136 |

|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|------|
|                | be using the same roads as motorists and increasing<br>congestion, pollution and compromising motorist safety.<br>In addition, we fear that light traffic will increase throughout<br>Strathfield Municipality by motorists trying to avoid arterial<br>roads such as Centenary Drive, Roberts Road and<br>Liverpool Road. There has been a noticeable increase in<br>traffic in Strathfield in the last ten years, particularly due to<br>major residential developments in areas such as<br>Homebush, Homebush West, Liberty Grove,<br>Rhodes and so on.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | vicinity of the ILC will be less than 1% and will not cause<br>a significant increase in congestion. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan which would be prepared with due<br>consideration for safety. Trucks would be prevented<br>from accessing residential streets.<br>The traffic volumes generated by the proposed ILC are<br>low. There is no reason why they alone would cause<br>traffic diversion into residential streets. |                   |      |
|                | Centenary Drive including the overpass across Liverpool<br>Road took many decades to be completed. This opening of<br>this road had the effect of moving some through traffic from<br>Strathfield's residential streets and expediting traffic<br>movement between key arterial roads and motorways.<br>With the increased use of Centenary Drive with heavy truck<br>vehicles, increased amounts of light traffic will use<br>Strathfield Municipality's residential streets in preference to<br>avoid heavy traffic and delays caused by increased use.<br>If this development proceeds, the State Government<br>should investigate intersections by building of overpasses<br>or underpasses at intersections such as<br>CentenaryDrive/Arthur Street, Centenary Drive, which is<br>part of the roadways of Homebush Bay Drive and Roberts<br>Road/King George Road, connects much of the traffic from<br>the north shore to the west and south west.                                                    | The assessment in the EA Report Chapter 7, shows<br>these works will be required without the ILC being<br>developed and should be discussed between the RTA<br>and Councils.                                                                                                                                                                                                                                                                                                                                                |                   |      |
|                | The development of the Rhodes Peninsula, Sydney<br>Olympic Park, Liberty Grove and proposed development in<br>the Parramatta Road corridor rely on these roads to<br>facilitate traffic movement, particularly small vehicle."<br>Many of the areas targeted under State Government Urban<br>Consolidation programs rely on these roads for transport.<br>Access to facilities including local business. The proposed<br>Intermodal terminal at Enfield will involve road access<br>points into the site at Cosgrove Road and Roberts Road.<br>Despite the claims by Sydney Ports that there will be no<br>access from the southern point of Cosgrove Road, trucks<br>will still enter into Cosgrove Road from Liverpool Road at<br>the north end. The proposed entry on Cosgrove Road<br>involves turning from Liverpool Road. Access to Cosgrove<br>Road by heavy truck vehicles will have a detrimental<br>impact on both residential and commercial properties in<br>Strathfield and Strathfield South. | Truck volumes will increase by less than 1% as a result<br>of the ILC. Most if not all of these will travel to/from the<br>west and mostly via Roberts/Norfolk Roads. No trucks<br>will access the ILC via Cosgrove Rd south.                                                                                                                                                                                                                                                                                               |                   |      |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                          | ID          |                              |
|                | If entry to the site from Cosgrove Road is open, trucks will<br>enter Cosgrove Road from Liverpool Road.<br>It is likely many trucks entering the Cosgrove Rd entry will<br>travel along Liverpool Rd from an eastern direction, rather<br>than from the Centenary Drive/Liverpool Road /<br>intersection, because trucks on Centenary Drive would<br>logically enter from Roberts Road [eg Roberts Road is the<br>continuance of Centenary Drive]. If trucks travel along<br>Liverpool Road from an eastern direction, this will have a<br>serious impact on residential areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | There would be few, if any, trucks accessing the ILC<br>from east of Enfield, due to the target market that the<br>ILC serves, to the west of Enfield. Trucks using the<br>Cosgrove Road access may come from the Hume<br>Highway west of Roberts Road.                                                                                                                                                                  |             |                              |
|                | The Environmental Assessment claims that the proposed<br>ILC would significantly increase the number of containers<br>delivered by rail close to where the importers and exporters<br>are, thereby reducing the number of truck kilometres<br>travelled. Certainly, this would occur if the final point of<br>delivery was located in close proximity to the Enfield<br>intermodal terminal. However, in the diagram 'Key<br>businesses within the Enfield ILC market catchment area'<br>many businesses are located over 20 kilometres from<br>Enfield, which will require road travel for the distance<br>between Enfield and their final destination. These include<br>sites at Huntingwood [25 kms from Enfield], Prestons<br>[28km from Enfield], Wetherill Park [24km from Enfield],<br>Seven Hills [26 kms from Enfield]. It should be noted that<br>most of the Enfield 'catchment area' is the outer Western<br>Suburbs. Transportation from the Enfield site would still<br>require the majority of trips from Port Botany to be via road,<br>not rail. | There would be a decrease in the kilometres travelled<br>by heavy vehicles in order to serve this market,<br>compared to if movement to/from Port Botany was by<br>road only. Most of the Enfield catchment area is within<br>15 km of Enfield. Some activities will be internalised on<br>site (containers to/from warehouses) which otherwise<br>would have been made on the external road system<br>from Port Botany. |             |                              |
| Traffic        | I note in your layout of key features you show only a small<br>arrow to the main exit and don't indicate the exit roads and<br>very little of Roberts Road and nothing of the residential<br>area on the other side of Roberts Rd who are the main<br>people affected by the increase in traffic. As you state in<br>your report all traffic would concentrate on Roberts Rd and<br>Centennial drive.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Noted. Traffic movement during operation would be<br>managed through the Local Area Traffic Management<br>Plan. This would take into consideration potential<br>impacts on residential areas.                                                                                                                                                                                                                            | 571         | DoP Submission No 13,154,170 |
| Traffic        | Traffic suggestion<br>There should be a dedicated link road directly onto Roberts<br>Rd incorporated into the development.<br>It should be an overpass road that directly feeds north and<br>south onto Roberts Rd with enough curb side run in lane<br>way that allows for the smooth integration of traffic both<br>onto and off Roberts Rd. The western end of the site could<br>easily provide for this direct link road. As the NSW<br>Government also control the road through the RTA I<br>cannot foresee any issues there. It should simply be two<br>arms of the NSW Government sorting it all out.<br>This would absorb most of the traffic generated by the<br>proposed development and would also remove the<br>increased traffic off the local roads- which are already at<br>capacity. That is not to say that there should not be street                                                                                                                                                                                                           | Numerous access options were considered prior to<br>documentation and submission of the EA. The two<br>access points of Cosgrove Road / Hume Highway and<br>Norfolk Road / Roberts Road were the most beneficial.                                                                                                                                                                                                        | 823         | DoP Submission No 99         |

|                | access both in and out off the local roads, but with the<br>flyover pass road feeding onto the main road- that would be<br>the main truck access in and out of the site.                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                   |                           |
| Traffic        | You can't even imagine how much noise, dust, vibration,<br>pollution will be experienced by us. Even before the actual<br>functioning starts, there will be so much construction traffic<br>that our life would be made hell.                                                                                                                                                                                                                                                                  | Noise, air quality and potential impacts on health and<br>wellbeing are considered in EA report Chapters 11,12<br>and 17. The impacts can be managed and consistent<br>with Government guidelines. Construction Environment<br>Management Plans would be implemented to manage<br>identified impacts.                                                                                                                                                                                                                                                                                                                                                                                                                       | 542               | DoP Submission No 122     |
|                | You can't hide behind the fact that Oh, Hume Highway is<br>already very busy and road traffic is predicted to rise in the<br>near future, so what the heck we might as well put some<br>more trucks on the road, wouldn't make much difference                                                                                                                                                                                                                                                 | Traffic issues are addressed in EA report Chapter 7.<br>The increase of traffic on Hume Highway will be very<br>low in the context of traffic already on the road and that<br>will be on the road in the future.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                   |                           |
| Traffic        | People will be forced to move away from the traffic snarls.                                                                                                                                                                                                                                                                                                                                                                                                                                    | Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled, further<br>details are provided in EA report Chapter 7. The<br>increase in overall traffic volume on streets in the<br>vicinity of the ILC will be less than 1% and will not cause<br>a significant increase in congestion. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan which would be prepared with due<br>consideration for safety. Trucks would be prevented<br>from accessing residential streets.                                                                                                                                    | 828               | DoP Submission No 182     |
| Traffic        | The road we reside on, Roberts Rd, is already an extremely<br>busy road. At all times of the day and night during the week<br>and on weekends the road is congested with traffic.<br>The traffic has resulted in many negative impacts on the<br>residents of Roberts Rd and a Sydney Port for a freight<br>terminal will only increase these negative impacts on<br>residents.<br>To build a freight terminal in Enfield will lead to increased<br>traffic and worse conditions for residents | Noted.<br>Traffic issues are addressed in EA report Chapter 7.<br>The increase of traffic on Roberts Rd will be low in the<br>context of traffic already on the road and in the future.<br>Existing traffic issues have been reviewed and ILC<br>operation traffic impacts have been modelled. The<br>increase in overall traffic volume on streets in the<br>vicinity of the ILC will be less than 1% and will not cause<br>a significant increase in congestion. Traffic<br>management measures during operation would be<br>implemented through the Local Area Traffic<br>Management Plan which would be prepared with due<br>consideration for safety. | Traffic        | The report states "This involves, in effect, containers being transported longer distances by rail followed by shorter haul by road to their end destination." (page 15, par. 1) This cannot be achieved if 300,000 containers per year are off-loaded at Enfield and the containers, or their contents, transported all over Sydney. 300,000 containers means                                                                                                                                 | Off loaded containers will be transported into the immediate catchment of inner and middle western Sydney. The use of rail for 18km will reduce the distance that each container has to move by road. 300,000 TEU equates to less than 200,000 containers per year, and could be carried by less than 150,000                                                                                                                                                                                                                                                                                                                                                                                                               | 447               | DoP Submission No 315,158 |

|                | 300,000 large trucks moving onto local roads, if they are                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | trucks. There would be 1160 truck movements per                                                                                                                                                                                                                                                                                                                                                                                                                                                    | ID          |                       |
|                | not unpacked.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | weekday.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |             |                       |
|                | However, if the containers are unpacked on site, we could<br>have 900,000 smaller trucks jamming up the roads around<br>Enfield, Strathfield and Bankstown. With local major roads<br>already at capacity for most of the day, especially the<br>Centenary Drive/Roberts Road/King Georges Road<br>corridor, the M5 and the Hume Highway, there would be an<br>extremely negative impact on the residents and motorists<br>of the area. Again, noise, road congestion and emissions<br>from the extra trucks will be a severe health issue in such a<br>dense residential area. | Truck numbers were identified in Chapters 4 and 7 of<br>the EA report. There would only be 334 smaller truck<br>movements per weekday. These numbers will make a<br>minimal impact on existing and future background traffic<br>on the road network.<br>Noise, air quality and potential impacts on health and<br>wellbeing are considered in EA report Chapters 11,12<br>and 17. Construction and Operation Environment<br>Management Plans would be implemented to manage<br>identified impacts. |             |                       |
|                | Although the report claims that a 'zero tolerance' policy will<br>help ensure that containers transported by road will use<br>only designated routes, there is no way of keeping these<br>smaller trucks off local residential streets.                                                                                                                                                                                                                                                                                                                                         | SPC is committed to monitoring the compliance of ILC trucks with relevant regulations and legislation. Truck movements would be controlled through a Local Area Traffic Management Plan, which will prevent trucks from accessing residential streets, particularly Norfolk Rd (west) opposite the main access point for the ILC.                                                                                                                                                                  |             |                       |
|                | Since most containers delivered by road within the metro<br>area are delivered in business hours, rebates will only be<br>available for containers travelling to regional or interstate                                                                                                                                                                                                                                                                                                                                                                                         | site. A rebate scheme for carrying containers by road<br>out of normal hours is not in operation.                                                                                                                                                                                                                                                                                                                                                                                                  |             |                       |
|                | destinations, unless the trucks travel to their metro<br>destinations and then park and clutter local streets until<br>they make their delivery. Designated night-time off-peak<br>hours are not indicated.                                                                                                                                                                                                                                                                                                                                                                     | The ILC will operate 24 hours a day 7 days a week.<br>It is not in the financial interest of the truck operator to<br>wait in streets to make their delivery. Most truck<br>movements will be in daylight hours. Those at night will<br>be to locations that are able to receive them                                                                                                                                                                                                              |             |                       |
| Traffic        | Gould Street / Hume Highway Intersection. (This important<br>intersection does not rate a mention - it is the access to<br>another container storage area and industrial sites - and<br>is approximately 70 metres west of, and parallel to<br>Cosgrove Road.                                                                                                                                                                                                                                                                                                                   | No change is anticipated at the Hume Highway / Gould<br>Street intersection, other than a general increase in<br>traffic associated with background growth, independent<br>of the ILC.                                                                                                                                                                                                                                                                                                             | 834         | DoP Submission No 319 |
|                | Comments.<br>To claim in the EA that the increased traffic flow from the<br>Enfield ILC will have little or no effect up until 2016 on traffic<br>flows on the above mentioned problem intersections<br>makes a mockery of local knowledge. One would wonder<br>who designed the traffic flow models, collated the biased<br>data, and the authenticity of the facts used in the<br>assessment.                                                                                                                                                                                 | Details of the traffic modelling are provided in EA<br>Report Chapter 7. The data on which the modelling is<br>based was collected by independent survey firms. The<br>modelling used industry standard practice<br>methodology.<br>There are currently some 60,000 vehicles which use<br>Roberts Road each day. The ILC would increase this<br>by less than 1%.                                                                                                                                   |             |                       |
|                | In the Road Network Link Capacity Assessment (Vol.2<br>Page 52—4.3) Ports seem to have stuck their heads in the<br>sand. The 2005 study indicated that Roads such as the<br>Hume Highway are at or approaching their theoretical<br>capacity, represented by a degree of saturation of > 0.9 or<br>greater. How can they then claim that the additional Ports                                                                                                                                                                                                                   | The volumes generated by the ILC and likely to travel<br>on Hume Highway are minimal and will have a small<br>impact on the road network performance.                                                                                                                                                                                                                                                                                                                                              |             |                       |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Stakeholder | Name |

|                | generated traffic flow (B-Doubles, articulated trucks,<br>smaller trucks and the private vehicles of employees) will<br>make only a negligible difference to intersection<br>congestion?                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | U           |      |
|                | During the major staff shift rotation 3.30p.m. to 4.30p.m.<br>(Vol 2 Page 41 3.3.7 Summary of Operational Staff.) ILC<br>indicate a truck movement of approximately 90 trucks (Vol<br>1 Fig 7-4). They fail to include the 236 employees who<br>come and go from the site at this time. As there is no public<br>transport to the site it seems likely that 236 private vehicles<br>will be added to the forecast number of truck movements<br>during that period. This equates to a possible 326 vehicle<br>movements to and from the site during this critical one hour<br>period.                                                           | The movement of staff has been incorporated in the assessment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |             |      |
|                | The greatest potential for gridlock will occur when the ILC traffic coincides with school starting and finishing times (8.00 - 9.30 and 2.30 - 4.30) when parents drop off and pick up their children from Strathfield South High School and Malek Fahd Islamic School (just off the Hume Highway in Waterloo Road, Greenacre.) The greatest concentration of vehicles at the Islamic school occurs from about 3.30 pm to approximately 4.15 pm and almost invariably the traffic ceases in the left hand lane of the Hume Highway.                                                                                                            | The movement of trucks to/from the ILC would be<br>dispersed so that the trucks are not concentrated on<br>one particular location. The 2 access points to the ILC<br>gives truck drivers flexibility to avoid congestion if<br>necessary.                                                                                                                                                                                                                                                                                                                                                                    |             |      |
|                | The EA also fails to recognise the importance of the Norfolk<br>Road intersection as an access point to the Chullora<br>Market Place and the parents dropping off and picking up<br>children from the Malek Fahd Islamic school .It also<br>provides important access for the residents of the high<br>density housing development known as Norfolk Village.<br>The intersection at Cosgrove Road and the Hume Highway<br>is stated as poor even without the operation of the<br>proposed ILC Development. This intersection is important<br>to the successful operation of the ILC (Chapter 7 7.4.4<br>Volume 1—Intersection<br>Performance.) | The EA predicts satisfactory operation of the Norfolk RD intersection at peak times even with the ILC in operation. In consultation with the RTA, the intersection would be upgraded to improve safety for all road users. The Hume Highway / Cosgrove Road intersection would provide a secondary access point to the ILC, necessary for safety and operational reasons. The main cause of congestion at this intersection is the absence of a 3 <sup>rd</sup> eastbound lane on the Hume Highway. The small proportion of ILC traffic that would use this intersection would not exacerbate this situation. |             |      |
|                | The proposal by the EA for ILC to have permanent use of<br>all four lanes at the northern end of Cosgrove Road could<br>lead to a monopoly on the entire paved road surface, thus<br>preventing roadside parking which is essential to the<br>already established businesses along this section of road.<br>Currently this section at the northern end of Cosgrove<br>Road is in fairly poor condition.                                                                                                                                                                                                                                        | The EA does not propose the removal of parking from this intersection to serve ILC interests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |             |      |
|                | If ILC hold over any of their stated 1160 truck movements<br>per day,then to prevent queueing,these trucks according to<br>ILC would be held on site. Subsequent hourly                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | There would be no reason for the ILC to hold over any truck movements. Trucks if necessary will queue on site to wait until serviced as normal.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |             |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Response                                                                                                                                                                                                                                                                                                                                                                                                            | Stakeholder | Name                  |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-----------------------|
|                | Clearing rates could then well exceed the estimated peak<br>flow of 100+trucks/hour.In addition ILC could not prevent<br>privately owned trucks from leaving the site. To do so<br>could prevent the removal off-site of the contents of<br>approximately 140 TEU's per day. These trucks will then<br>take any route they can to exit the site. If the Hume<br>Highway and Roberts Road have reached saturation then<br>the only way out is via the southern end of Cosgrove Road<br>to the Punchbowl Road Intersection.               | The two access points are able to accommodate the expected traffic volumes generated by the ILC The Cosgrove Road site access would be configured to prevent the movement of trucks between the ILC and the southern end of Cosgrove Road.                                                                                                                                                                          | U           |                       |
|                | Rat Running Here We Come                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Use of residential streets by heavy vehicles would be prevented through implementation of the Local Area Traffic Management Plan.                                                                                                                                                                                                                                                                                   |             |                       |
|                | EA (Table 7-6 page 7-19 Vol 1,Future Intersection<br>Operation.) shows 2 intersections with 2005 Level F -AM<br>Peak rating and 1 intersection with Level E-AM<br>Peak rating. Projections for 2016 show 5 intersections with<br>Level F-AM Peak rating, and 4 intersections with Level<br>F-PM Peak rating. These 2005 ratings are considered<br>by those with local traffic knowledge to be gross<br>underestimates of the current situation, so it follows that<br>the projected figures for 2016 could well be wide of the<br>mark. | Level of Service is a measure of the weighted average<br>delay experienced by all vehicles using an intersection<br>during a 1-hour period. So it may be that despite delays<br>on one or more legs of an intersection, an acceptable<br>level of service is demonstrated.<br>The 2005 Levels of Service were based on surveys of<br>volumes at each intersection during the morning and<br>afternoon peak periods. |             |                       |
| Traffic        | It would have disastrous impacts on our community, our<br>environment and our roads. Dramatic increases in the<br>number of trucks going along our roads to and from the site<br>as under the proposal will result in: Increased traffic                                                                                                                                                                                                                                                                                                | Impacts on community are discussed in Chapter 17.<br>ILC operation traffic impacts have been modelled,<br>further details are provided in EA Report Chapter 7.<br>Trucks would be prohibited from using residential<br>streets through the Local Area Traffic Management<br>Plan which will be prepared with safety one of the key<br>consideration.                                                                | 45          | DoP Submission No 179 |
| Traffic        | I have lived in Roberts Rd for 54 years. I feel sorry for the<br>people in cars trying to get home most nights as the cars<br>and trucks on Roberts Rd are bumper to bumper.<br>I don't drive and I have to cross Roberts Rd to go to my Dr<br>in Waterloo Rd and also I shop at Greenacre. I find it hard<br>to cross Roberts Rd.<br>I can't see how it will minimise the traffic on Roberts Rd as it<br>is bad enough now. My next door neighbour has trouble<br>getting her car out on Roberts Rd                                    | ILC operation traffic impacts have been modelled,<br>further details are provided in EA Report Chapter 7. The<br>increase of traffic on Roberts Rd will be very low in the<br>context of traffic already on the road and that will be on<br>the road in the future.                                                                                                                                                 | 797         | DoP Submission No 171 |
| Traffic        | The residents of Belfield have to contend not only with<br>increased vehicular traffic but also rail traffic.<br>Although the proposal anticipates 'at least 75 per cent of<br>truck movements would be via Roberts Road and<br>Wentworth Street', I have noticed an increase in the<br>number of heavy vehicles using Burwood Road, Belfield,<br>turning into and from Punchbowl Road. With increased fuel<br>costs, many truck drivers are tempted to take shortcuts.                                                                 | Noted<br>ILC operation traffic impacts have been modelled,<br>further details are provided in EA Report Chapter 7.<br>Traffic would be managed through the Local Area<br>Traffic Management Plan which would also prohibit<br>trucks from using residential streets and would be<br>prepared with due consideration of access issues.                                                                               | 524         | DoP Submission No 110 |

|                | causes corteges to become fragmented, as they turn right<br>through traffic lights, This also occurs now in off peak<br>periods. It causes stress among mourners who lose their<br>way inside Rookwood.<br>5. Vehicles in funeral corteges generally depart en masse.<br>Annually more than 5,200 funerals are conducted, and<br>more than 1.3M people visit Rookwood.<br>6. Traffic exiting Rookwood must share the narrow lanes of<br>the railway overpass close to Centenary Drive. This often is<br>not possible, as the large trucks operated by Australian<br>Post at the Sydney Letters Facility cannot fit in the lanes of            | Noted.<br>This issue is independent of the ILC.                                                                                                                                                                                                                                                                                                                                    |                   |      |
|                | a bridge originally designed for two lanes and subsequently<br>divided into three lanes.<br>The delays in exiting Rookwood become more frequent as<br>the number of large AP trucks increase.<br>7.;Delays for exiting traffic are exacerbated further by<br>unlimited parallel parking on the northern side of Weeroona<br>Road and the<br>short traffic light phasing at Weeroona Rd/Centenary Dr<br>intersection.                                                                                                                                                                                                                          | This issue is independent of the ILC.                                                                                                                                                                                                                                                                                                                                              |                   |      |
|                | <ul> <li>I he upshot of point Nos 6 and 7 is that exiting funeral traffic banks up Memorial Avenue, Rookwood for hundreds of metres. (75% of cemetery traffic using the Strathfield gate flows along Memorial Avenue, as it is the route to the Crematorium and Catholic .Cemeteries.)</li> <li>'9. The above numbered points describe existing traffic problems. The Road Traffic &amp; Transport studies in the EA show the status quo will be deteriorated further by: 10. Failing to take account of the traffic problems mentioned above and failing to recognize the needs of the bereaved and mourners in funeral corteges.</li> </ul> | This issue is independent of the ILC.                                                                                                                                                                                                                                                                                                                                              |                   |      |
|                | 11. Increasing certainty that the intersections at Arthur<br>Street/Centenary Dr; Hume Hwy/Centenary Dr and Hume<br>Hwy/Cosgrove Rd will fall below category C of Table 7-1<br>(EA Ch.7 Sinclair Knight Merz, [SKM] page7-5).                                                                                                                                                                                                                                                                                                                                                                                                                 | These intersections are forecast to expect diminished<br>level of performance in the future due to natural<br>background traffic growth, regardless of the ILC<br>development.                                                                                                                                                                                                     |                   |      |
|                | 12. That, given that the traffic lights are biased to the Centenary Dr flow, the average delay per vehicle for cemetery traffic at Weeroona Rd/Centenary Dr. is worse than category B now and will deteriorate under the effects of the proposed project,                                                                                                                                                                                                                                                                                                                                                                                     | Level of Service is a measure of the weighted average<br>delay experienced by all vehicles using an intersection<br>during a 1-hour period. So it may be that despite delays<br>on one or more legs of an intersection, an acceptable<br>level of service is demonstrated.<br>The ILC contributes less than 1% of overall traffic<br>volumes on the adjacent arterial road network |                   |      |
|                | 13. The traffic study by SKM is based on compounded assumptions making the conclusions and sensitivity estimates less reliable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The traffic study was based on industry normal practice.<br>The assumptions used and the sensitivity analysis is<br>documented in the EA.<br>The 2005 traffic volumes were based on surveys<br>conducted by an independent survey company.                                                                                                                                         |                   |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Stakeholder | Name                  |

|                | 14. The traffic study suggests that an undefined rate of<br>"natural" traffic growth will congest a number of<br>intersections used by funeral and cemetery traffic and the<br>ILC Enfield will make no difference. This tends to remove<br>responsibility for upgrading intersections from the project<br>proposers to the RTA. We are left wondering how long<br>major intersections such as Hume Hwy/Centenary Ave and<br>Arthur St/Centenary Ave would be left to congest before<br>the RTA took •remedial action and even whether it would<br>be possible to increase their capacity. | All relevant assumptions regarding traffic generation by<br>the ILC were taken into account based on current<br>industrial/logistics knowledge.<br>Traffic volumes continue to grow for many reasons<br>including increased population, development and<br>redevelopment of sites in existing areas, and increased<br>mobility. It is prudent to allow for this when predicting<br>future traffic conditions. The ILC contributes less than<br>1% of overall traffic volumes on the adjacent arterial<br>road network.                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <u> </u>    |                       |
|                | 15.Although the traffic study indicates low numerical increases in traffic following the commissioning of the ILC Enfield, there does not appear to be recognition that these increments in traffic volumes represent slow-to-roll heavy vehicles a significant portion of which are longer than six cars.                                                                                                                                                                                                                                                                                 | The different operating characteristics of heavy vehicles have been incorporated into the traffic analysis presented in the EA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |             |                       |
| Traffic        | Rat running is common in the area and with streets such as<br>water (Enfield), Burwood Rd (Belfield and Belmore) being<br>narrowed the hold ups are already a problem.<br>Face to face everyone I speak with agrees the increase in<br>traffic is a big worry and then the plan is to go ahead<br>regardless of what we poor bloody rate payers think.<br>Need I mention the radio traffic reports to tell us Roberts<br>Rd, Centenary Drive etc have traffic hold-ups nearly every<br>day?                                                                                                | Trucks would be prevented from using residential<br>streets through the Local Area Traffic Management<br>Plan which will be prepared with safety one of the key<br>considerations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 87          | DoP Submission No 102 |
| Traffic        | We believe the location of the proposed Centre is<br>extremely inappropriate. This is a major concern as we<br>know our Property's price value will dramatically decrease<br>due to increased traffic and noise.<br>We are very concerned about our family's safety and health<br>due to the high levels of truck movement, queuing and<br>pollution.                                                                                                                                                                                                                                      | Property values over Sydney as a whole have been<br>increasing and given the limited impacts associated<br>with the proposal there are no reasons why the<br>proposal would affect local property prices. Further<br>details are provided in The traffic study was based on<br>industry normal practice. The assumptions used and<br>the sensitivity analysis is documented in the EA report<br>Chapter 17.<br>Traffic, noise, air quality and potential impacts on health<br>and wellbeing are considered in The traffic study was<br>based on industry normal practice. The assumptions<br>used and the sensitivity analysis is documented in the<br>EA.Report. Chapters 7,11,12 and 17. Impacts on air<br>and noise from the operation of the site are acceptable<br>within relevant guidelines and should have no<br>implications for public health. Construction and<br>Operation Environment Management Plans would be<br>implemented to manage identified impacts. | 792         | DoP Submission No 116 |

|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|-----------------------|
| Traffic        | It will be a large and noisy traffic generating development<br>right in the centre of suburban western Sydney between<br>Belfield, South Strathfield and Greenacre suburbs where a<br>lot of people live and work and where there is already a<br>great deal of through traffic with Roberts Rd, the Hume<br>Hwy and Georges River Rd being major traffic arteries.<br>Over 200 dwellings were built in 1992 on the corner of<br>Roberts Rd and Norfolk Rd where the intersection is with<br>Wentworth St, the roadway which will carry 70% of traffic<br>from the ILC.<br>I fail to see how adding more truck traffic to Roberts Rd and<br>the Hume Hwy is going to be possible without dangerous<br>gridlock occurring. | ILC operation traffic impacts have been modelled.<br>Further details are provided in The traffic study was<br>based on industry normal practice. The assumptions<br>used and the sensitivity analysis is documented in the<br>EA. Report Chapter 7. Traffic would be managed<br>through the Local Area Traffic Management Plan which<br>would also prohibit trucks from using residential streets<br>and would be prepared with due consideration of<br>access issues. | 793               | DoP Submission No 147 |
|                | The traffic that will be generated by this development does<br>not begin and end at the entrance to the ILC but fans out<br>across the metropolitan area especially metropolitan west.<br>I as a Greenacre resident expect to experience more traffic<br>delays, dangers and frustrations when trying to exit or<br>enter Greenacre from Roberts Rd via Norfolk RD.                                                                                                                                                                                                                                                                                                                                                       | The increase of traffic on Roberts Rd will be low in the context of traffic already on the road and in the future.                                                                                                                                                                                                                                                                                                                                                     |                   |                       |
| Traffic        | The development could cause many hazardous<br>implications such as: movement of heavy road traffic<br>(trucks, semi trailers) freight movements.<br>Increased road traffic hazards, traffic congestion on<br>residential roads                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Accident rates and other road safety issues were<br>considered in the EA. Pedestrian safety would be<br>considered during preparation of the Local Area Traffic<br>Management Plan. An Emergency Response and<br>Incident Management Plan would also be prepared for<br>the site. Trucks would be prevented from entering<br>residential streets.                                                                                                                      | 810               | DoP Submission No 168 |
| Traffic        | We oppose the proposal as we already have trucks and<br>semis at the moment and do not which (sic) to increase<br>more pollution and noise                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 796               | DoP Submission No 169 |
| Traffic        | The building of the ILC is substantial and will result in a large increase in semi-trailer truck movement in the Enfield area.<br>Our local roads are already filled with traffic. The main roads in this area, the M5, Centenary Drive and King Georges Rd are already congested and very little public transport infrastructure has been added to alleviate this problem. It doesn't make sense to add to this problem by building an Intermodal, which due to lack of road infrastructure will probably not be able to run efficiently.                                                                                                                                                                                | ILC operation traffic impacts have been modelled,<br>further details are provided in EA Report, Chapter 7.<br>The increase of traffic on arterial roads will be very low<br>in the context of traffic already on the roads and in the<br>future.                                                                                                                                                                                                                       | 809               | DoP Submission No 123 |
|                | Since local roads are already congested, there is a concern<br>that car drivers will increasingly use residential roads to<br>avoid the traffic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Traffic would be managed through the Local Area<br>Traffic Management Plan which would also prohibit<br>trucks from using residential streets and would be<br>prepared with due consideration of access issues.                                                                                                                                                                                                                                                        |                   |                       |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Response                                                                                                                                                                                                                                                                                            | Stakeholder | Name                      |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                     | ID          |                           |
| Traffic        | Huge increase/volume of trucks that will use present<br>infrastructure (roads) which cannot cope.<br>Not all trucks will use Roberts Rd exit and use Cosgrove<br>Rd. Roads are overused presently, it will be sheer horror.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | ILC operation traffic impacts have been modelled,<br>further details are provided in EA Report Chapter 7. The<br>increase of traffic on Cosgrove Rd will have few<br>implications on the intersection performance. Problems<br>may result from the natural growth of traffic on Hume<br>Highway.    | 798         | DoP Submission No 174     |
| Traffic        | Obviously there will be more trucks and semi trailers going<br>down Liverpool Road, probably even at night. Liverpool<br>Road is already very congested, especially during<br>peak/hours. If during those times you are forced to use<br>Liverpool Road you often wonder if it would not be quicker<br>to walk. Inconvenience: because of this traffic the trucks<br>and semitrailers would slow us down even more.                                                                                                                                                                                                                                                                                                             | ILC operation traffic impacts have been modelled,<br>further details are provided in EA Report Chapter 7. The<br>increase of traffic on Hume Hwy will be very low in the<br>context of traffic already on the road and in the future.                                                               | 799         | DoP Submission No 139     |
| Traffic        | I request that a reconsideration of this plan be made as we<br>are already fully / congested with noise and air pollution<br>from the heavy traffic. This development will definitely<br>increase the current problem.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Impacts on air and noise from the operation of the site<br>are acceptable within relevant guidelines and should<br>have no implications for public health.<br>Operation Environmental Management Plans would be<br>implemented to address any potential impacts.                                    | 800         | DoP Submission No 146     |
| Traffic        | A main worry to us is the closure of Cosgrove Road at the<br>intersection with Punchbowl Road. This acts as the outlet<br>for the people in the area as it is light controlled and we do<br>not have to battle with chaos of Punchbowl Road. Most of<br>our access to Bankstown and Chullora is through this<br>outlet.                                                                                                                                                                                                                                                                                                                                                                                                         | This intersection will not be closed. Heavy vehicles from<br>the IILC will be prevented from travelling through the<br>intersection, but no other vehicles will be affected.                                                                                                                        | 802         | DoP Submission No 118     |
| Traffic        | The purpose of this submission is to object to the proposal.<br>Reasons for the objection of this proposal include:<br>Increased in traffic in the area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | ILC operation traffic impacts have been modelled,<br>further details are provided in EA Report Chapter 7. The<br>increase of traffic on arterial roads will be low in the<br>context of traffic already on the roads and in the future.                                                             | 803         | DoP Submission No 153     |
| Traffic        | Liverpool Road is quite congested at the best of times. Now you want still to add countless trucks and semi-trailers and pollution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | ILC operation traffic impacts have been modelled,<br>further details are provided in EA Report Chapter 7. The<br>increase of traffic on arterial roads will be low in the<br>context of traffic already on the roads and in the future.                                                             | 804         | DoP Submission No 155     |
| Traffic        | Important data and presumptions contained in the EA are<br>flawed. Traffic data contained in the EA conflicts with data<br>collected by Council's own traffic engineers.<br>These anomalie, that are of great concern, jeopardise the<br>accuracy of the EA and are detailed in Council's<br>submission on the project. Council's traffic engineers have<br>demonstrated throughout our submission that many of our<br>roads and major intersections are already operating at<br>capacity. It does not make sense, to place further pressure<br>on these roads and also puts at risk the successful<br>operation of an Intermodal Logistics Centre at this location<br>The modelling of air quality and noise impacts from road | A response to Council's data is provided separately in<br>the Council response section. The results presented in<br>the EA are valid.<br>Impacts on air and noise from the operation of the site<br>are acceptable within relevant guidelines and should<br>have no implications for public health. | 838         | DoP Submission No 173,150 |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                             | Response                                                                                                                                                                                                                                                                                                                                                                                                             | Stakeholder<br>ID | Name                  |

|                | result from road traffic are also seriously questioned due to inaccurate traffic volume data.                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                      |                   |                       |
| Traffic        | Any use of the Enfield Marshalling Yards as a freight<br>terminal should not be approved. The site is completely<br>unsuitable for such facility given its proximity residential<br>areas and the adverse community and environmental<br>impacts the redevelopment would create. It would have<br>disastrous impacts on our community, our environment and<br>on our roads.<br>Sydney Ports proposal would have severe impact on the | Land use immediately surrounding the site is<br>predominantly industrial, further details are provided in<br>EA Report Chapter 14.<br>Impacts on roads and community are discussed in EA<br>Report Chapters 7 and 17.<br>Impacts on air and noise from the operation of the site                                                                                                                                     | 794               | DoP Submission No 117 |
|                | health of the residents as well as traffic flow within 10km radius of the site causing traffic jam, noise, air and lighting pollution for nearby residents.                                                                                                                                                                                                                                                                          | are acceptable within relevant guidelines and should have no implications for public health.                                                                                                                                                                                                                                                                                                                         |                   |                       |
|                | As you know Traffic at Robert Road and Hume Highway<br>(Liverpool Road) are running at full capacity specially<br>during business hours (06:00 Hrs onwards) and there are<br>no rooms for any additional traffic (trucks and semi trailers)<br>to add on to these two roads.                                                                                                                                                         | Traffic modelling showed that the contribution to the Hume Highway operation by the ILC would be of no significance in the overall performance.                                                                                                                                                                                                                                                                      |                   |                       |
|                | • We are really concerned that extra traffic generated by the Logistic Centre will spill into the residential areas of surrounding suburbs.                                                                                                                                                                                                                                                                                          | The Local Area Traffic Management Plan would include measures to prevent trucks from using residential streets.                                                                                                                                                                                                                                                                                                      |                   |                       |
|                | • Dramatic increases in the number of trucks (an extra 900 semi-trailers / day) going along our roads and rail to and around from the site as under the proposal will result in more traffic, more pollution, more noise, increased risk of road accidents and loss of property values.                                                                                                                                              | Traffic, noise, air quality and potential impacts on health<br>and wellbeing are considered in EA report, chapters<br>7,11,12 and 17. Impacts on air and noise from the<br>operation of the site are acceptable within relevant<br>guidelines and should have no implications for public<br>health. Construction and Operation Environment<br>Management Plans would be implemented to manage<br>identified impacts. |                   |                       |
|                |                                                                                                                                                                                                                                                                                                                                                                                                                                      | Property values over Sydney as a whole have been<br>increasing and given the limited impacts associated<br>with the proposal there are no reasons why the<br>proposal would affect local property prices. Further<br>details are provided in Chapter 17.                                                                                                                                                             |                   |                       |
| Traffic        | The additional traffic generated by this ILC will overwhelm<br>the major roads and will result in many vehicles using side<br>streets. All this additional traffic will result in more accidents<br>and add significantly to air pollution                                                                                                                                                                                           | Traffic, noise, air quality and potential impacts on health<br>and wellbeing are considered in EA Report, chapters<br>7,11,12 and 17. Construction and Operation<br>Environment Management Plans would be<br>implemented to manage identified impacts. Safety<br>would be a key consideration during preparation of the<br>Local Area Traffic Management Plan.                                                       | 840               | DoP Submission No 322 |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <u> </u>    |                       |
| Traffic        | This proposal should not go ahead in a quiet residential<br>area like Enfield. Dramatic increases in the number of<br>trucks going along roads to and from the site, the increased<br>pollution, increased noise and increased congestion hence<br>greater road accidents.                                                                                                                                                                                                                      | Traffic, noise, air quality and potential impacts on health<br>and wellbeing are considered in Chapters 7,11,12 and<br>17. Construction and Operation Environment<br>Management Plans would be implemented to manage<br>identified impacts. Safety would be a key consideration<br>during preparation of the Local Area Traffic<br>Management Plan.                                                                                                                                                                 | 841         | DoP Submission No 323 |
| Traffic        | This proposal should not go ahead in a quiet residential<br>area like Enfield. Dramatic increases in the number of<br>trucks going along roads to and from the site, the increased<br>pollution, increased noise and increased congestion hence<br>greater road accidents.                                                                                                                                                                                                                      | Traffic, noise, air quality and potential impacts on health<br>and wellbeing are considered in Chapters 7,11,12 and<br>17. Construction and Operation Environment<br>Management Plans would be implemented to manage<br>identified impacts. Safety would be a key consideration<br>during preparation of the Local Area Traffic<br>Management Plan.                                                                                                                                                                 | 66          | DoP Submission No 324 |
|                | On page 8 of the Executive summary "the assessment<br>found that there would be about 1,160 truck movements<br>into and out of the site per day' The majority of these would<br>be between 6am and 5pm, with a daily peak of 103<br>movements between 2pm&3pm. "<br>The Cosgrove -Hume Hwy intersection is already one of<br>the busiest in Sydney and is highly congested between<br>8am - 10 am and 2pm - 4pm. So when you add additional<br>trucks form the logistics centre you have chaos. | The Hume Highway / Cosgrove Road intersection would provide a secondary access point to the ILC, necessary for safety and operational reasons. The main cause of congestion at this intersection is the absence of a 3 <sup>rd</sup> eastbound lane on the Hume Highway. The small proportion of ILC traffic that would use this intersection would not exacerbate this situation.                                                                                                                                  |             |                       |
|                | In a media release on Jan 17 Greg Martin stated " Sydney<br>ports Corporation is working with traffic modelling experts<br>to design the best possible system" You mean to tell me<br>that a traffic management plan still hasn't been devised.<br>Well of course not traffic is not a Sydney Ports problem it is<br>an Rat's. So build the development and worry about traffic<br>later even if it causes significant damage and accidents.                                                    | Further consideration of traffic issues would be<br>undertaken during detailed design and during<br>preparation of the LATM plan.                                                                                                                                                                                                                                                                                                                                                                                   |             |                       |
| Traffic        | This proposal should not go ahead in a quiet residential<br>area like Enfield. Dramatic increases in the number of<br>trucks going along roads to and from the site, the increased<br>pollution, increased noise and increased congestion hence<br>greater road accidents.                                                                                                                                                                                                                      | Traffic, noise, air quality and potential impacts on health<br>and wellbeing are considered in Chapter 7 of the EA<br>report. The increase of traffic on arterial roads will be<br>very low in the context of traffic already on the roads<br>and that will be on the roads in the future. Construction<br>and Operation Environment Management Plans would<br>be implemented to manage identified impacts. Safety<br>would be a key consideration during preparation of the<br>Local Area Traffic Management Plan. | 842         | DoP Submission No 325 |

|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|-----------------------|
| Vibration      | The report states that "construction and operation activities<br>at the site would cause ground vibration but are unlikely to<br>cause significant ground vibration beyond 25m from the<br>source" and that 'the potentially affected residential<br>premises to the proposed ILC are approximately 50m<br>away" How can this not be an issue? You are kidding right?<br>A development of this size would cause greater impact<br>than 25 metres, more closer to 100metres which would<br>definitely impact residential areas and cause significant<br>damage to property and health. Will Sydney ports be<br>responsible for the damage bill. | Vibration was addressed in the EA. The types of<br>activities carried out on site during both construction and<br>operation are unlikely to cause significant ground<br>vibration beyond 25 m from the source. Given that the<br>nearest potentially affected premises to the ILC are<br>more than 50 m away, it is unlikely that ground vibration<br>will be an issue on this site.<br>There will be no substantial change in truck traffic<br>volumes on any road near residential areas. Therefore,<br>there will be no change in existing vibration conditions<br>due to traffic. | <u>ID</u><br>841 | DoP Submission No 323 |
| Vibration      | Further, within the Environmental Assessment itself, there<br>is no mention of provisions to guard against the huge<br>increase in noise, pollution and vibration that will directly<br>affect myself and other residents living near the freight line<br>in Marrickville. The provision of noise walls or sound<br>barriers etc along residential areas appears to be a<br>reasonable minimum requirement should your project go<br>ahead regardless of tax payers' dissent.                                                                                                                                                                  | The appropriate approach to the management of effects<br>from the rail freight line through is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor.                                                                                                                                                                                                        | 831              | DoP Submission No 316 |
| Vibration      | You can't even imagine how much noise, dust, vibration,<br>pollution will be experienced by us.<br>Even before the actual functioning starts, there will be so<br>much construction traffic that our life would be made hell.<br>I can imagine how much noise, vibration, pollution, dust<br>would be generated by this. Its simply not a viable idea.                                                                                                                                                                                                                                                                                         | Vibration was addressed in the EA. The types of<br>activities carried out on site during both construction and<br>operation are unlikely to cause significant ground<br>vibration beyond 25 m from the source. Given that the<br>nearest potentially affected premises to the ILC are<br>more than 50 m away, it is unlikely that ground vibration<br>will be an issue on this site.<br>There will be no substantial change in truck traffic<br>volumes on any road near residential areas. Therefore,<br>there will be no change in existing vibration conditions<br>due to traffic. | 542              | DoP Submission No 122 |
| Vibration      | There is no mention of provisions against the huge<br>increase in noise, pollution and vibration that will directly<br>affect all residents along the freight lines: The provision of<br>noise walls or sound barriers along residential areas should<br>appear as a reasonable minimum requirement if the project<br>were to go ahead regardless of tax-payers' dissent.                                                                                                                                                                                                                                                                      | The appropriate approach to the management of effects<br>from the rail freight line through is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor.                                                                                                                                                                                                        | 788              | DoP Submission No 112 |
| Vibration      | At times, we now experience vibrations in our home when<br>trains and large freight trucks pass by and the construction<br>has not even commenced. We can only imagine what they<br>would be like once the proposal is granted.                                                                                                                                                                                                                                                                                                                                                                                                                | Vibration was addressed in the EA. | amenity/quality of life                                                                                                                                                                                                                                                                                                                      | The site is in close proximity to established residential areas and intensification of use involving 24/7 road and rail use, light spill, night noise and airborne pollution will severely compromise amenity. Given the apparent absence of funding to develop a network of similar terminals beyond Enfield, the proposed Centre, if approved, would be subject to ever increasing demands for expansion, thus further eroding residential and environmental amenity. The proposed Intermodel Logistics Centre will affect every community along the rail freight line and road transport routes from Port Botany. The site is in close proximity to a number of local schools and will create health risks. | Amenity, wellbeing and quality of life are further<br>considered in Chapter 17 of the EA Report. Noise and<br>air pollution are considered in Chapters 11 and 12 of<br>the EA Report. These studies show that amenity will be<br>unaffected during operation of the proposed<br>development as air and noise criteria set by DEC<br>guidelines will be met during most operations. These<br>criteria are health based and, as long as they are met,<br>there is no reason why there should be a greater risk to<br>the health of school children in the area. SPC is<br>committed to achieving noise and air quality goals<br>during operation. Construction impacts can be<br>managed to achive a satisfactory level. Light spill was<br>addressed in Chapter 16 and Appendix I of the EA and<br>will be managed by the use of appropriate light fittings<br>and levels. The increased traffic on the surrounding<br>road network due to the proposal was discussed in<br>Chapter 7 and Appendix B of the EA. It will be minimal.<br>Traffic on the streets surrounding the lLC would be<br>controlled through a Local Area Traffic Management<br>Plan. Road safety will be managed through this<br>process, and the risk of accidents for pedestrians will<br>not change. The ILC will be capped at 300,000 TEU by<br>virtue of the size of the site and the conditions of<br>consent. The appropriate approach to the management<br>of effects from the rail freight line through the area is<br>one that includes all relevant Government agencies,<br>including DEC, RailCorp and ARTC. SPC will work with<br>these other agencies and relevant Councils to consider<br>ways of managing impacts associated with rail<br>operations in the dedicated freight rail corridor. |                                                                                       |                                                                                                            |

| Traffic                                                                                                                                                                                                                                                                                                                              | Efficient ingress to and egress from the site has been<br>demonstrated to be unfeasible given the current road<br>configuration.<br>The surrounding road network has already reached<br>capacity, extensive queuing is experienced and road<br>accidents at already high levels. The roads in the locality<br>are unable to support the type and number of heavy<br>vehicles proposed.                                                                                                                                                                                                                              | Ingress and Egress have been modelled as part of the<br>Traffic Assessment provided in Appendix B and Chapter<br>7 of the EA Report. Access to the site will be redesigned<br>to provide for heavy vehicles. The corner at Norfolk Rd<br>and Roberts Rd will be redesigned to allow safe and<br>appropriate access for trucks.<br>The current and projected traffic volumes were<br>considered during preparation of the Traffic Assessment<br>and the road network is able to support the project<br>increase in truck numbers on the road network. |                                                                                       |                                                                                                                            |
|                                                                                                                                                                                                                                                                                                                                      | Given the attendant costs of upgrading external and<br>internal infrastructure, noise attenuation, pollution controls<br>etc., the proposal is deemed uneconomic and unviable.<br>Additionally, because rail freight termination at Enfield will<br>still require massive truck movements to and from the site<br>to service markets in outer Sydney, uneconomic queuing<br>on and near the site will inevitably occur., to the frustration<br>of transport operators, because of access difficulties. The<br>Enfield location has passed it's "use by" date: it is no longer<br>sufficiently far from Port Botany. | Information relating to the project justification is provided<br>in Chapter 22 of the EA. The project as described is<br>clearly justified in economic terms and in its ability to<br>safeguard the local environment.<br>Chapter 3 of the EA provides a clear justification for the<br>site to be located within the market catchment area it will<br>serve.                                                                                                                                                                                        |                                                                                       |                                                                                                                            |

| Alternative Sites | There are other and better alternatives to and for the Enfield site. | Alternative sites are considered in Chapter 3 of the EA<br>Report. The site at Enfield is considered to be the most<br>suitable site to service the inner and middle western<br>areas of the Sydney market, given the area available,<br>its location in an industrial area and its direct<br>connection to Port Botany by a dedicated rail freight<br>line. | 821           | Submission no 317 |

| IssueCategory           | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | StakeholderID | Name           |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|----------------|
| amenity/quality of life | The site is in close proximity to established<br>residential areas and intensification of use involving<br>24/7 road and rail use, light spill, night noise and<br>airborne pollution will severely compromise<br>amenity.<br>The site is in close proximity to a number of local<br>schools and will create health risks.<br>Given the apparent absence of funding to develop a<br>network of similar terminals beyond Enfield, the<br>proposed Centre, if approved, would be subject to<br>ever increasing demands for expansion, thus<br>further eroding residential and environmental<br>amenity.<br>The proposed Intermodel Logistics Centre will<br>affect every community along the rail freight line<br>and road transport routes from Port Botany. | Amenity, wellbeing and quality of life are further<br>considered in Chapter 17 of the EA Report.<br>Noise and air pollution are considered in<br>Chapters 11 and 12. These studies show that<br>amenity will be unaffected during operation of the<br>proposed development as air and noise criteria<br>set by DEC guidelines will be met during most<br>operations. These criteria are health based and,<br>as long as they are met, there is no reason why<br>there should be a greater risk to the health of<br>school children in the area. SPC is committed to<br>achieving noise and air quality goals during<br>operation. Construction impacts can be managed<br>to achieve a satisfactory level.<br>Light spill was addressed in Chapter 16 and<br>Appendix I of the EA and will be managed by<br>the use of appropriate light fittings and levels.<br>The increased traffic on the surrounding road<br>network due to the proposal was discussed in<br>Chapter 7 and Appendix B of the EA. It will be<br>minimal. Traffic on the streets surrounding the<br>ILC would be controlled through a Local Area<br>Traffic Management Plan. Road safety will be<br>managed through this process, and the risk of<br>accidents for pedestrians will not change.<br>The ILC will be capped at 300,000 TEU by virtue<br>of the size of the site and the conditions of<br>consent.<br>The appropriate approach to the management of<br>effects from the rail freight line through the area<br>is one that includes all relevant Government<br>agencies, including DEC, RailCorp and ARTC.<br>SPC will be happy to work with these other<br>agencies and relevant Councils to consider ways<br>of managing impacts associated with rail<br>operations in the dedicated freight rail corridor. | 821           | Submission 317 |

| IssueCategory           | Comments                                                                                                                                                                              | Response                                                                                                                                                                                                                                                                                                                                                                                   | StakeholderID | Name                         |

| justification for project | Whilst I acknowledge the economic importance of moving<br>from road to rail freight to cater for future increases in<br>containerised trade, I am not at all confident that this<br>proposal has been adequately planned, nor sufficient fund<br>allocated to a.) upgrading of infrastructure to make the<br>proposal economically viable, b.) safeguarding the<br>environment or c.) ameliorating the effects on local<br>communities. | The project as described is clearly justified in economic terms and in its ability to safeguard the local environment. Further information relating to justification for the project is provided in Chapter 22 of the EA Report. | 821            | Submission no 317 |

# SUBMISSIONS PETITION NOISE

| IssueCategory | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Response                                                                                                                                                                                                                                                                                                                                                                                      | Stakeholder ID | Name                      |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|---------------------------|
| Noise         | Our quality of life would be affected by the pollution, dust and noise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Air pollution and noise impacts are considered<br>in Chapters 11 and 12. Noise mitigation<br>measures have been proposed for the site<br>which would be further developed during<br>detailed design and during preparation of the<br>Construction and Operation Environmental<br>Management Plans.                                                                                            | 701            | Submission 97             |
| Noise         | We live in Railway Rd, Sydenham, which backs directly<br>onto the freight line. We have double glazing but the noise<br>levels are already high from night trains.<br>We can put up with it at the present level of train movement<br>but living here would be unbearable if the number of trains<br>increased.<br>Rolling stock is antiquated and ill maintained. Screaming<br>brakes and loud banging noises are frequent in the middle<br>of the night, waking even those residents who have double<br>glazing installed.<br>Unlike the airlines that have made a commitment to<br>reducing plane noise, there has been no effort made to<br>reduce the impact of freight train noise apart form the<br>erection of a few ineffectual and ugly noise barriers.<br>If trains are well maintained, noise levels could be reduced<br>if trains travel at a slow speed. At the moment there are re<br>no restraints at all on speed. Drivers regularly travel at high<br>speed with correspondingly high levels of carriage and<br>brake noise.<br>The metal truss bridge over the Illawarra line is particularly<br>noisy on the northern side of the tracks, with frequent loud<br>banging noises indicating a structural or maintenance<br>problem | The appropriate approach to the management<br>of effects from the rail freight line through the<br>area is one that includes all relevant<br>Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these<br>other agencies and relevant Councils to<br>consider ways of managing impacts associated<br>with rail operations in the dedicated freight rail<br>corridor. | 664            | Submissions 177, 132, 175 |
| Noise         | The noise currently experienced from 4 speed inhibitors in<br>Barremma Rd and used by many young drivers as an<br>obstacle course will increase.<br>The residents on the first floor will experience higher noise<br>levels                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Barremma Rd will not be subject to traffic from the ILC.                                                                                                                                                                                                                                                                                                                                      | 663            | Submission 24             |

#### SUBMISSIONS PETITION POLLUTION

| IssueCategory | Comments                                                                | Response                                                                                                                                            | StakeholderID | Name             |

| pollution     | Our quality of life would be affected by the pollution, dust and noise. | Dust and noise from the ILC site will be managed to<br>acceptable levels and quality of life for neighbours will<br>not be affected by the proposal | 701           | Submission No 97 |

#### SUBMISSION PETITION PROPERTY IMPACT

| IssueCategory   | Comments                                                                                             | Response                                                                                                                                                                                                                                     | StakeholderID | Name              |
|-----------------|------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|-------------------|
| Property Impact | Hundreds of millions of dollars will be wiped off residential property values. This is unacceptable. | Property values over Sydney as a whole have been increasing and given the limited impacts associated with the proposal there are no reasons why the proposal would affect local property prices. Further details are provided in Chapter 17. | 821           | Submission no 317 |
| Property Impact | Our properties would suffer (from the development)                                                   | Property values over Sydney as a whole have been increasing and given the limited impacts associated with the proposal there are no reasons why the proposal would affect local property prices. # RE: ENFIELD ILC – ADDITIONAL INFORMATION AND NOISE MITIGATION OPTIONS TO BE CONSIDERED DURING DETAIL DESIGN & EMP PHASE

This Technical Memo, in particular, deals with the issues raised in submissions by DEC and NSW Health, which require the provision of additional information to address the identified issues. The key issues addressed herein include:

- how conservative the noise modeling is that was presented in the Noise Impact Assessment (NIA) compared to the noise modeling results of likely/typical operational scenarios during day, evening and night under calm and a range of worst-case wind conditions,
- confirmation of SPC's commitment to achieve the Project Specific Noise Levels (PSNLs) through the provision of additional physical and management noise mitigation measures to be considered during the Detailed Design (DD) and Environmental Management Plan (EMP) phase, where more detailed noise modeling would be undertaken,
- 3. provision of a more detailed analysis and additional information with respect to noise impacts potentially causing sleep arousal,
- 4. provision of wind data used in the noise assessment, and
- 5. provision of a more detailed analysis and additional information with respect to traffic noise impacts.

# 1. CONSERVATIVE NOISE MODELLING & ASSESSMENT

As an operator has not yet been appointed for the site, the design and operation of the site is fluid in many ways, leaving several uncertainties pertaining to the final site layout/ design, construction of buildings and general operations on site.

Given the above, and consistent with our instructions from SPC to undertake noise modeling for the "worst-case" scenario so as not to unnecessarily prescribe the operation of the site at this stage, a "worst case" noise model was built and a conservative assessment was undertaken in accordance with all relevant noise policies and guidelines.

Whilst DEC's comments acknowledge that the NIA conservatively assesses a "worst-case" operational scenario, especially with regards to the INP's 'Amenity' noise criteria (which are more stringent than the 'Intrusiveness' criteria for this project), the need to present a likely or typical operational scenario is identified in order to demonstrate that noise impacts can be curtailed and managed if necessary.

Before considering any additional noise mitigation measures to those already included in the NIA, it is important to identify the key areas where the NIA model can be viewed as being conservative. Table 1 below presents the key areas of conservatism which are built into the assumptions used in the NIA noise model for assessing impacts at night, and what effect each of these would have if one were to model a likely or typical night operational scenario.

| Item Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Differences between NIA's 'Worst-<br>Case' Noise Assessment and a<br>'Typical' Night Noise Assessment                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Operations at Night the Same as for Day<br>The modelled "worst-case" scenario is assessed as if it would occur<br>24 hours per day, 7 days per week. Although this is possible in<br>situations where the ILC might operate at its maximum capacity at<br>night, it is likely that night-time activities on site would be a fraction<br>of the peak daytime activities as can be derived from the<br>operational daily profile information available at this stage – see<br>"Daily Truck Movement Profile" graph presented in Section 3.2 of<br>this Technical Memo.                 | According to the information presented<br>in Annexure 1, the night-time<br>assessment presented in the NIA would<br>be 2dB(A) higher for a 15 minute<br>'intrusiveness' criteria assessment and<br>7dB(A) higher for a 9hr 'amenity'<br>criteria assessment, than for a typical<br>night scenario with respect to noise<br>contributions from mobile plant<br>(forklifts, gantry cranes, reach stackers                                                         |
| 2. Activities at Capacity throughout the Entire Assessment<br>Period The NIA conservatively assumes that the "worst-case" scenario operations will occur for an entire 9-10 hour night-time duration, where night is 10pm-7am on Mon-Sat and 10pm-8am on Sundays and Public Holidays, as is the case when assessing to the INP's Amenity Criteria. The modelled "worst-case" scenario may occur for short periods in the night, but from what can be derived from the operational information available at this stage, this is unlikely to occur for the entire 9-10 hour night period. | and trucks).<br>SPC advises that for a typical night<br>scenario, each train would take approx.<br>2hrs to load/unload and up to 2 trains<br>would be handled in one night. So<br>locomotive noise can be assumed to<br>occur for approx. 40% of a 9-10hr night<br>period. Therefore, the night-time<br>assessment presented in the NIA would<br>be 4dB(A) higher than for a typical night<br>scenario with respect to noise<br>contributions from locomotives. |
| <ul> <li>Wind Blows in the Same Direction throughout the Entire Assessment Period</li> <li>Noise exceedances presented in Table 4.11 on p.35 of the NIA (or Table 11.7 on p.11-12 of the EA), are for when adverse winds blow in a direction that enhance noise to neighbouring residences and</li> </ul>                                                                                                                                                                                                                                                                               | Based on a detailed analysis conducted<br>on the hourly wind data from the<br>Lidcombe AWS for the entire year of<br>1999 (a copy can be provided on<br>request), noise-enhancing winds to any                                                                                                                                                                                                                                                                  |

## Table 1 – Conservatism in the NIA's Night-time Noise Assessment

| Item Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Differences between NIA's 'Worst-<br>Case' Noise Assessment and a<br>'Typical' Night Noise Assessment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| most of the exceedances are found when assessing site noise to<br>the INP's Amenity Criteria. It is assumed in the NIA that such noise<br>enhancing winds blow with strengths of less than 3m/s and in the<br>same direction for the entire 9-10 hour night period. Based on the<br>review of hourly wind data recently provided to us by SKM, this is<br>not likely to occur frequently.                                                                                                                                                                                                                                                                       | one receiver are not likely to remain<br>steady in any single direction for more<br>than 69% of an entire night-time<br>assessment period. This proportion of<br>time in one night that noise-enhancing<br>(adverse) wind could blow in any single<br>direction, equates to 1.6dB(A). That is,<br>the NIA night-time predictions would be<br>1.6dB(A) higher than for a typical night<br>scenario with respect to this aspect<br>alone.                                                                                                                                                                                                                                                                                           |
| 4. Wind Blows at a Constant Maximum Speed throughout the Assessment Period Where adverse (or noise enhancing) wind conditions are identified to occur for more than 30% of the time, making wind a feature of the area, an assessment under these conditions is required. The noise model has conservatively used the maximum noise-enhancing wind of 3m/s occurring for the entire 9-10 hour night period. From the hourly wind data available it can be seen that wind strengths will vary up and down from 0m/s to 3m/s throughout the night, therefore the wind's level of noise enhancement is not likely to be as prominent as that modelled for the NIA. | Given that noise-enhancing winds to<br>any one receiver are not likely to<br>remain at a steady 3m/s speed<br>throughout an entire night, but are<br>shown to fluctuate between 0 and 3m/s<br>throughout the night, then the night-<br>time assessment presented in the NIA<br>would be significantly higher than what<br>is likely to occur. For example,<br>depending on the location, the NIA<br>noise model would be up to 6-7dB(A)<br>higher than with a 1.5m/s wind speed<br>(the highest mean and median wind<br>speed from all four seasons analysed<br>from the Lidcombe hourly wind data),<br>and up to 4-5dB(A) higher than with a<br>2m/s wind speed, representing the<br>average wind speed over a typical<br>night. |
| 5. No Acoustic Shielding from Containers on Site<br>Local shielding benefits provided by container stacks on site are not<br>included in the NIA noise model. Containers, which can be stacked<br>5-6 high (2.4m each x 5 containers = 12m high), especially in the<br>two storage areas located in the NW and SW corners of the site,<br>can provide 5-10dB(A) noise shielding during times when mobile<br>plant operates behind a stack and 0dB(A) noise shielding when<br>operating without stacking.                                                                                                                                                        | Based on an assumption that for 50%<br>of the time in an assessment period,<br>mobile plant is likely to be working in<br>positions shielded by containers<br>stacked on site and for the remaining<br>50% of the period mobile plant will not<br>be shielded by containers, the night-<br>time assessment presented in the NIA<br>would be 3dB(A) higher than for a<br>typical night scenario with respect to<br>noise contributions from mobile plant<br>(forklifts, gantry cranes, reach stackers<br>and trucks).                                                                                                                                                                                                              |
| 6. Non-Industrial Small Buildings Off-Site not Modelled<br>All non-industrial (ie residential and small commercial buildings) off-<br>site have not been included in the noise model, so acoustic<br>shielding benefits provided by such buildings located between the<br>site and noise receiver locations are not accounted for.                                                                                                                                                                                                                                                                                                                              | For the worst-affected (first-row) of<br>dwellings impacted upon by site noise,<br>the NIA is not conservative and<br>therefore is suitable for a typical night<br>scenario assessment.<br>However, for rows of dwellings located<br>beyond the first row, the noise<br>assessment presented in the NIA would<br>be 5-10dB(A) higher than if the model<br>included all of the off-site small<br>buildings.                                                                                                                                                                                                                                                                                                                        |

Table 1 above shows how the noise impacts presented in the NIA are conservative and how they can be significantly reduced should the most realistic operational scenario be modelled. These types of adjustments to noise modelling can be incorporated in the detailed noise model once the operators of the site have been appointed and at the Detailed Design and Environmental Management Plan phase to accurately establish the likely operational noise levels from the ILC site.

In the interim however, the most likely or typical operational scenario has been modelled from all available information known at this stage of the project. To model the typical operational scenario the following assumptions were included in the noise model:

- the earth mound of 2-5m described in the EA as running along the eastern side of the site, is modelled at a 5m height in most areas including the gaps between Buildings A, B, C, D and E, down to a 2m height when immediately behind Buildings A, B, C, D and E, with a 2m solid fence along the top of the earth mound the NIA noise model did not include a 2m fence on top of the earth mound and was not at a constant 5m height in all critical sections along the boundary as has been modelled herein,
- a row of containers stacked 3 high (3 x 2.4m = 7.2m) along the western side of the 'Toll Lease' area,
- a row of containers stacked 3 high (3 x 2.4m = 7.2m) along the southern side of the Empty Container Storage (ECS) area,
- placement of fixed mechanical services plant behind buildings, screens and/or in plantrooms, so to not contribute to the overall noise emissions from the site,
- site operation corrections for the number and duration of activities expected to occur during the day, evening and night periods to permit assessment of impacts in terms of the 'intrusiveness' and 'amenity' criteria for each period – see Annexure 1,
- wind direction corrections for the proportion of time that noise-enhancing winds blow to any one receiver over the entire 'amenity' assessment periods: less than 43% during the 10-11 hour day period, 53% during the 4 hour evening period and 69% during the 9-10 hour night period (based on an analysis of hourly wind data from Lidcombe AWS for the entire year of 1999 provided to us by SKM – a copy of this data can be provided if required), and
- wind speed corrections for the noise-enhancing winds blowing from the site to any one receiver over an entire assessment period the noise model was corrected to have a wind speed of 1.5m/s at night and 2m/s in the day and evening (being the highest mean and median wind speeds per period from all four seasons analysed from the Lidcombe hourly wind data referred to above), representing the wind speeds over most of a typical day/evening/night 'amenity' assessment period, and a 2.5m/s wind speed assumed for most of the time during the day/evening/night 'intrusiveness' periods.

The NIA presented the worst-case operational scenarios and assessed these against the most noise-sensitive period being the Night period. As the typical operational scenario is different for each of the three assessment periods (Day, Evening and Night), the results of noise modelling presented here in Tables 2, 3 and 4 are for the Day, Evening and Night periods, respectively. For each of the three assessment periods, noise was modelled for calm conditions and for the worst-case wind conditions based on a more detailed wind-vector analysis conducted of all available wind-rose data for each of the three assessment periods and 4 directions during the most critical Night period). Separate noise models for the 'intrusiveness' and the 'amenity' assessment periods, were run to allow for the direct assessment of impacts for each scenario during each of the three assessment periods.

|     |                                     |          | 'Intrusive' Noise Levels, L <sub>Aeq(15min)</sub> |                  |                |                     |                |                  |                |                  |          | 'Amenity' Noise Levels, L <sub>Aeq(night)</sub> |                  |                |                  |                |                  |                |                  |

#### Table 2 – 'Daytime' Operational Scenario With Mitigation Measures, dB(A)

Note: 1. Bold font indicates exceedance with NSW EPA Industrial Noise Criteria

2. Equivalent to internal criteria of 40dB(A), as per Table 2.1 and Note 10 of the NSW INP, which is more stringent than the 'school playground' criterion of 55dB(A) as per Table 2.1 of the NSW INP.

# Table 4b – 'Night' Operational Scenario With Mitigation Measures – INP 'Amenity' Assessment, dB(A)

Note: 1. Bold font indicates exceedance with NSW EPA Industrial Noise Criteria

Tables 2, 3, 4a and 4b above show how noise emissions from the site during typical operations, with the NIA noise mitigation measures applied and the assumptions and measures noted above, will comply with both the 'Intrusiveness' and the 'Amenity' noise criteria under calm conditions and worst-case noise-enhancing wind conditions, at all receivers with the exception of the following slight exceedances:

- > Daytime (Intrusiveness): Locations A5 & A6 under a NW wind condition by 1dB(A)
- ➤ Night-time (Intrusiveness): Location A1 under a SE wind condition by 2dB(A)
- > Night-time (Intrusiveness): Location A6 under a NW wind condition by 4dB(A)

As shown above, and consistent with the NIA, the greatest impacts are expected to occur during the night-time period of 10pm to 7am/8am. An analysis of the daily background noise level profiles shows that during the 'morning shoulder period' of 6am to 7am, which technically falls within the night period but according to the INP can be assessed separately as the 'morning shoulder period', background noise levels tend to increase by 5-10dB(A) compared to 2-4am when background noise levels are lowest and subsequently influence the night 'intrusiveness' noise criteria. Given that most of the ILC site maximum noise events at night are likely to occur during the hour commencing at 6am (see Table 5 in Section 3 below), then impacts during this end of night-time period ('morning shoulder period') would be significantly less than indicated above.

Furthermore, the modelled typical operational scenarios presented in Tables 2, 3, 4a and 4b above do not include additional noise mitigation measures, such as those discussed in Section 2 below. Therefore, there is scope to further reduce noise emission levels from the operation of the site as part of the DD / EMP phase in order to comply with the Project Specific Noise Levels.

Notwithstanding he above, a 1-2dB(A) noise exceedance is generally considered marginal and inconsequential, and a 4dB(A) exceedance is generally considered of minor significance. Such noise exceedances are manageable through the process of preparing and implementing an effective Environmental Management Plan for the operation of the site.
### 2. NOISE MITIGATION OPTIONS TO BE CONSIDERED DURING DETAIL DESIGN & EMP PHASE

It is considered that all practical (reasonable/ feasible) noise mitigation options were considered at the NIA stage to reduce noise level emissions from site. These included residential grade mufflers (capable of providing a 6dB reduction to plant) and the construction of two noise walls, one to the north west, the other to the south east. At the EA/ concept stage it was known that these measures could be incorporated onto the site, and it was therefore possible for SPC to commit to them.

Due to the number of uncertainties about the site layout/ design, construction of buildings and general operations on site, it was deemed impractical to consider further mitigation at this stage. It will however be necessary to consider all possible mitigation options during the Detailed Design (DD) and Environmental Management Plan (EMP) phase where more detailed noise modeling would be undertaken, once the operators have been appointed to the site and specific operational details are better known.

The noise mitigation options which would be considered further during the DD and EMP phase and evaluated in terms of their reasonableness and feasibleness include:

#### A. Physical Mitigation Measures

- 1. optimise the detailed design of noise barriers, earth mounds and fencing in terms of their location, heights and lengths
- 2. the use of quieter plant and equipment (where available)
- 3. the strategic placement and/or acoustic treatment of fixed plant and the replacement of PA systems with alternative means of communications on site to avoid noise contributions from such items
- 4. the strategic placement of container stacks on site to provide shielding to nearest residential receptors
- 5. the strategic placement of buildings on site to provide shielding to nearest residential receptors
- 6. the construction of acoustic screens, sheds or canopies (partial enclosures) over noise generating areas
- 7. work with the rail industry to minimize locomotive impacts within the context of the Rail Working Group for Port Botany Expansion

### B. Management Measures

- 8. training and educational programs for employees on how to minimise unnecessary noise at night (eg quiet methods for handling and moving containers etc)
- 9. minimise certain operations at night (ie capacity / operational hours) where such actions would not affect the feasibility of the site's operation
- 10. management of operations to minimise unnecessary locomotive presence / idling / movements
- 11. monitor noise levels on site to determine actual noise levels compared to PSNLs and to address specific issues
- 12. incorporate all reasonable and feasible physical and management measures into the final EMP for the operation of the site

At this stage SPC commits to achieving the Project Specific Noise Levels (PSNLs) established in the EA when the site is operational through the implementation of more specific noise mitigation and management measures, to be determined at the DD and EMP phase.

### 3. SLEEP AROUSAL – ADDITIONAL DETAILED ANALYSIS

It is reiterated that peak noise level events such as noise from dropping heavy items or other high noise level events have the potential to cause sleep disturbance. The NSW Industrial Noise Policy (INP) does not specifically address sleep disturbance from high noise level events.

The potential for high noise level events at night and effects on sleep are addressed in the NIA, however in response to the additional information requested by DEC in their submission the following additional assessment is provided.

The result of DEC's review of current research on sleep disturbance is presented in the NSW "Environmental Criteria for Road Traffic Noise" (ECRTN) that was published in 1999. At this time it was concluded that the range of results is sufficiently diverse and that it is not reasonable to issue new noise criteria.

From the available research, DEC recognises that current sleep disturbance criteria of  $L_{A1,(1min)}$  less than  $L_{A90,(15min)}$  plus 15 dB(A) is not ideal. Nevertheless as there is insufficient evidence to conclude what should replace it, DEC continue to use it as a guide that identifies the likelihood of sleep disturbance.

Sleep disturbance is assessed as the emergence of the  $L_{A1(1min)}$  level above the  $L_{A90(15min)}$  level at the time. Appropriate screening criteria for sleep disturbance are determined to be an  $L_{A1(1min)}$  level 15dB(A) above the Rating Background Level (RBL) in each area for the night-time period.

It is noted that the  $L_{A1(1min)}$  descriptor is meant to represent a maximum noise level measured under "fast" time response and normally an analysis based on either  $L_{A1(1 min)}$  or  $L_{A(max)}$ , is acceptable.

The NIA, in assessing the worst-case operational scenarios, had identified Locations A1 and A5 during calm-isothermal conditions and Locations A1, A4, A5 and A6 during adverse wind conditions, where the screening criterion for sleep disturbance is exceeded.

To provide a more detailed analysis of the noise exceedances, the following are addressed herein:

- > present the extent that the maximum noise level exceeds the background level,
- > estimate the number of times or how often high noise events will occur at night,
- time of day sleep disturbance is likely to occur sleep disturbance is normally taken to occur between 10pm and 7am as is for this assessment,
- evaluate whether there are times of day when there is a clear change in the noise environment (ie such as during early morning shoulder periods), and
- comparison of existing maximum noise levels to those predicted to occur in future from the operation of the site.

# 3.1 EXTENT THAT MAXIMUM NOISE LEVEL EMISSIONS EXCEED NIGHT BACKGROUND NOISE LEVELS

The results from Table 4.9 from the NIA are repeated below in Table 5, with some additional results from modeling in two extra wind directions, showing the extent that the predicted ILC maximum noise emissions exceed the monitored night-time background noise levels (RBLs) presented in Table 3.2 of the NIA.

# Table 5 – Assessment of Predicted ILC Site Maximum Noise Emissions Compared to Night Background Noise Levels

| Location Night-time |                              | Night-time                                                    |             |                 | I     | Predicted IL   | .C Maxim | um Noise L     | evels, dB | (A)            |       |                |

Note: Bold indicates areas where exceedances occur to the screening sleep arousal criteria

### 3.2 NUMBER OF ILC MAXIMUM NOISE EVENTS PER NIGHT

Although this level of detail cannot be provided accurately at this early stage of the project, without having appointed operators for the site, estimates of the likely number of maximum noise events are presented below based on the nightly hourly profile of container movements.

According to SPC, the profile diagram of container movements will tend to follow the profile of on site container truck activity, as presented in Figure 7-4 and Table 7-4 of the EA – see figure below.

That is, based on 300,000 TEU throughput per annum = 1,000 TEU throughput per week day (equivalent to 630 containers), and assuming at least one train (80 TEU capacity train equating to 40 containers) to be unloaded in between 10pm-5am, the following hourly profile at night is assumed. Furthermore, it is assumed that there will be approximately 2 'bangs' per container movement (eg. train to storage area or storage area to transport vehicle).

| Hour Commencing             | 10pm | 11pm | 12am | 1am | 2am | 3am | 4am | 5am | 6am |
|-----------------------------|------|------|------|-----|-----|-----|-----|-----|-----|
| Truck container truck       | 18   | 8    | 7    | 11  | 11  | 0   | 0   | 15  | 41  |

Table 6 – Estimated No. of ILC Maximum Noise Events per Hour at Night

Note: as an example train assumed to unload between 10pm and midnight

The figure above taken from the EA and Table 6 above, both show clearly that most of the truck and container movements and subsequently likely maximum noise events from the ILC site, are expected to occur during the day period with some occurring during the evening period and only a very few at night (13% of total). The time of the night when most of the maximum noise events are likely to occur is shown in the table above to be at the start and end of the night-time period, which tend to have higher background noise levels than in the middle of the night-period, resulting in less sleep disturbance impacts.

Furthermore, the likely number of maximum noise events are determined and presented as a range for each hour at night.

Importantly, during the time of the night (around 3am and 4am) when background noise levels are at their lowest and sleep disturbance risks are greatest, maximum noise events would likely be low.

# 3.3 TIME OF DAY OF SLEEP DISTURBANCE & TIMES OF DAY WHEN THERE IS A CLEAR CHANGE IN THE NOISE ENVIRONMENT

A further analysis of the daily noise monitoring graphs presented in Appendix C of the NIA was conducted. From this, it was found that during the early morning shoulder period of 6am to 7am, which technically falls within the night period but according to the INP can be assessed separately as the 'morning shoulder period', background noise levels tend to increase by 5-10dB(A) compared to 2-4am when background noise levels are lowest.

Given that background noise levels during the quietest time of the night, being 2-4am, tend to influence the RBLs the most, and subsequently set the sleep disturbance criteria, then the screening sleep arousal criteria at assessment locations would also increase and become less stringent by 5-10dB(A) for the 'morning shoulder period'. Furthermore, given that most of the ILC site maximum noise events at night are likely to occur during the hour commencing at 6am (see Table 6 above), then sleep disturbance impacts throughout the night-time period would be significantly less than predicted in Table 5 above and in the NIA.

# 3.4 COMPARISON OF EXISTING MAXIMUM NOISE LEVELS TO PREDICTED ILC MAXIMUM NOISE LEVELS

Monitoring of existing night-time maximum noise levels was undertaken as part of the NIA. To compare the magnitude of maximum noise events modeled from the operation of the site to the

magnitude of typical maximum noise levels that currently occur in the existing noise environment, a more detailed analysis was undertaken of the available noise data acquired from noise monitoring conducted in February-March 2005 at representative locations surrounding the site.

Below the  $L_{max}$  noise levels presented are those monitored at the six monitoring locations selected as best representing the assessment locations relevant to site operational noise.

The tables below present for each monitoring location the typical range of maximum noise levels ( $L_{max}$  Range) and the typical range of differences measured between the maximum and the equivalent-continuous noise levels ( $L_{max} - L_{eq}$  Range). The  $L_{max}$  noise levels reported below are those that occur at night, and for  $L_{max}$  noise levels greater than 65dB(A) where  $L_{max} - L_{eq} \ge 15dB(A)$ .

Table 12 – Location M6: 40 Bazentin Street, Belfield

The above tables show that maximum noise levels forming part of the existing acoustic environment are currently high and well above the  $L_{A90}$  background noise plus 15dB(A) screening criterion and also above 65dB(A), which is considered to be the external noise level that could cause sleep arousal based on recent research (see Section 4.1.2 of the NIA). Furthermore, the above tables show that the measured maximum noise levels are generally greater than the emergence criterion of  $L_{max} - L_{eq} \ge 15$ dB(A).

Table 13 below compares typical existing maximum noise levels monitored at the noise monitoring locations against the modeled maximum noise levels expected to occur at assessment locations in close proximity to the monitoring locations.

Table 13 shows that maximum noise levels from ILC site operations are predicted to generally be significantly lower in level than the measured existing maximum noise levels, even under adverse wind conditions at night.

### 4. WIND DATA

One of the DEC comments indicated that the wind data used in the noise assessment was not included in the NIA, although it is the same data as that used in Air Quality Assessment.

See Annexure 2 for the wind data provided to us by SKM which was used in the NIA.

In addition to the above data used in the NIA, hourly wind data over the year of 1999 was obtained from Lidcombe AWS after the NIA, and this data was analyzed in detail to determine suitable corrections to be applied to the typical operation noise model to account for the likelihood that noise-enhancing wind will not be steady in speed and in direction throughout any assessment period.

### 5. TRAFFIC NOISE

DEC noted in their submission that it would be beneficial for the traffic noise increase associated solely with ILC traffic to be reported. To address this point, traffic volumes provided to us by SKM for <u>with</u> and <u>without</u> the ILC project were used to determine the likely increase in traffic noise expected from the ILC project.

It can be seen from the traffic volume and composition tables in Annexure 3, that traffic will increase on the surrounding road network on all roads, with the exception of the Hume Highway (west-bound) where there will be a net decrease in traffic as a result of the operation of the ILC. It should be noted that the traffic numbers quoted above do not directly correspond to traffic numbers generated by on-site operations at the ILC. The reason for this is that the road network traffic modeling assumes likely route shifts that may occur as a result of the project. That is, vehicles that currently use Roberts Road may change to another route once the ILC project becomes operational.

Annexure 4 presents the traffic noise increases resulting from the ILC project. Along most of the roads surrounding the ILC site, the traffic noise increases due to the ILC project are 0 to 0.2dB(A), which is considered immeasurable, unnoticeable and inconsequential to the overall traffic noise levels of the area.

The only exception to this is Cosgrove Rd (south-bound from Hume Highway), which shows the largest increase in traffic, equating to a noise increase of +1.4dB(A) in terms of the overall night-time  $L_{Aeq(9hr)}$  and daytime  $L_{Aeq(15hr)}$  noise metrics, and in terms of the hourly  $L_{Aeq(1hr)}$  noise metric. However, this section of road is totally within an industrial zoned area with no residential receivers affected.

With respect to the issue raised by DEC regarding 'acute' traffic noise levels [ie greater than daytime 65dB(A)  $L_{Aeq(15hr)}$  and night-time 60dB(A)  $L_{Aeq(9hr)}$ ], where 'acute' noise levels already exist the level of traffic noise increase generated from the ILC project is 0 to 0.2dB(A), which is considered minor and immeasurable. Furthermore, the NIA found that provision of noise barriers for residences is not possible as driveway access to roads is required. In summary, it would not be reasonable and feasible to reduce traffic noise levels in this case.

# ANNEXURE 1 – PROFILE OF TYPICAL SITE ACTIVITIES

| Daily Truck Movement Profile |       |                                  |                         |  |  |  |  |  |

#### Sources for Hourly Profiles

 Roberts Rd
 Classified Count undertaken for this study, February 05

 Punchbowl Rd
 Classified Count undertaken for this study, February 05, at Georges River Rd East of Coronation Rd

 King Georges Rd
 RTA Permanent Count Station 24008, 2002 data

 Cosgrove Rd
 Assume same daily profile as has been assumed as the operating profile for the ILC. Note that this may result in an over-estimate of night-time traffic.

 Hume Hwy
 Classified Count undertaken for this study, February 05, at Hume Hwy East of Cosgrove Rd

| Amenity Quality of Life | A major facility of this size will inevitably result in some<br>impacts at a local level. Having reviewed the detail of the<br>proposal the Council supports the proposed development<br>as achieving an appropriate balance between the strategic<br>(national state and regional) benefits accruing from the<br>facility and the localised amenity effects.<br>It is considered that careful planning and implementation<br>strategies will minimise potential local impacts to a level<br>where they do not override the critical benefits arising from<br>construction of this facility. | Noted.   | 844         | Property Council<br>Submission 327 |

| economic benefit | The development of intermodals needs to be undertaken<br>now so as to meet the demand which will result from the<br>forecast increase in containerised freight.<br>The inclusion of cross docking/warehousing facilities<br>together with container storage will lead to efficiencies for<br>on-site and off site industry and will assist in combating the<br>relatively high cost of doing business in Sydney. Believes<br>this will make Sydney a more attractive place for industry<br>and lessen the incentive for the logistics industry to locate<br>elsewhere.                                                                                                                                                                                                                                                                                                                                | Noted.   | 580          | Walker Corporation<br>Submission 151       |
| economic benefit | Believes the ILC is in the long term interests of the State.<br>The proposed ILC will be a significant part of a much wider<br>program to build an economically competitive and<br>environmentally sustainable freight network<br>The expansion of Port Botany and its associated<br>infrastructure, such as the ILC network is imperative if<br>Sydney is to retain its position as the premier port in<br>Australia. Land and sea infrastructure in Queensland,<br>Victoria and the Northern Territory is becoming<br>increasingly competitive. Brisbane Ports Corporation has<br>enough vacant land to continue expanding, and Victoria<br>currently has enough vacant land to continue expanding,<br>and Victoria currently has a highly regarded road transport<br>network.<br>The Enfield ILC is a key part of building an economically<br>competitive and environmentally sustainable industry | Noted.   | 579          | State Chamber Of Commerce<br>Submission 67 |
| economic benefit | The development of the ILC Enfield would result in a reduced cost base that would enable Weston Cereal Industries to further increase export business and local employment. (Kindly note Weston Cereal Industries was awarded the NSW Premier's Exporter of the Year Awards for the highest growth out of Sydney Port) George Weston Foods Limited has recently built a \$150m bakery at Chullora in close proximity to the proposed ILC at Enfield. The development of the ILC Enfield would enable this business to access imported ingredients in a more timely and cost effective manner. It would also provide opportunities to increase export business                                                                                                                                                                                                                                         | Noted.   | 577          | Weston Milling<br>Submission 57            |
| economic benefit | The shipping and logistics industry as a whole would be the<br>beneficiaries of an intermodal strategy and the<br>development of intermodal sites around Sydney, ultimately<br>passing on the benefits to the consumer.<br>It is the State government's responsibility to ensure that the<br>NSW trade is not diverted through other states (at an<br>additional cost to the NSW consumer), which will no doubt<br>occur if the necessary infrastructure is not made available<br>for an economical and sustainable operation                                                                                                                                                                                                                                                                                                                                                                         | Noted.   | 575          | Shipping Aust<br>Submission 40             |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |          | ID          |                                                  |
| Site qualities | From interaction with importing and exporting companies<br>believes the central location of the Enfield site makes it<br>ideal for an intermodal terminal being close to the freight's<br>source or destination. The size of the site and its vicinity to<br>major arterial roads and the rail freight network also<br>cements its strategic importance for Sydney's freight<br>distribution network.                                                                                                                                                  | Noted.   | 580         | Walker Corporation<br>Submission 151             |
| Site qualities | The Enfield site has many attributes such as its proximity to<br>the market place, freightline, trucking routes and its<br>location in an industrial area.                                                                                                                                                                                                                                                                                                                                                                                             | Noted.   | 579         | State Chamber of Commerce<br>Submission 67       |
| Site qualities | Being an intermodal terminal ourselves, we strongly<br>believe in the concept of moving freight to key locations<br>that can support different modes of transport under a<br>common user open access environment                                                                                                                                                                                                                                                                                                                                       | Noted.   | 578         | MIST<br>Submission 66                            |
| Site qualities | With the port projecting a tripling of capacity in twenty years<br>time, something needs to be done now to make sure that<br>the roads of Sydney don't become one long container truck<br>parking lot.<br>The solution is to move by rail, and to do that intermodal<br>terminals located close to where containers are headed or<br>come from. Enfield is an ideal location to be the first of a<br>network of intermodals terminals and should be developed<br>now.                                                                                  | Noted.   | 575         | Shipping Aust<br>Submission 40                   |
| Site qualities | The NSWRTA supports in principle the development of<br>projects, including this proposal that represents a<br>substantial improvement to land side infrastructure to<br>enable more efficient movement of containers to and from<br>Port Botany                                                                                                                                                                                                                                                                                                        | Noted.   | 845         | NSW Road Transport association<br>Submission 326 |
| Site qualities | The Enfield site ahs a long history of use for rail and<br>associated activity and the proposed intermodal facility is a<br>rational and appropriate extension of this long standing<br>use. The development of the logistics centre at the<br>proposed Enfield site is well located to the freight<br>distribution markets needing improved servicing and will<br>capitalise on the long established infrastructure already<br>existing at the site. The facility at this location is considered<br>more appropriate than possible alternative sites. | Noted.   | 844         | Property Council<br>Submission 327               |

| Traffic       | The existing infrastructure will be less able to cope as the trade through the Sydney Ports increases. Transport routes will become choked with trucks and Sydney's reputation as an efficient port and trading city will not be able to be sustained. In our view it would be environmental vandalism to not develop a conveniently placed intermodal terminal, which will better facilitate the movement of cargo into, out of and around Sydney. The ILC addresses our concerns so we support the development of it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Noted.   | 826               | CBFCA<br>Submission no number              |
| Traffic       | The development of inland terminals and the expanded use<br>of rail for freight distribution is essential to combat the ever<br>increasing demand on Sydney's roads form all sources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Noted.   | 580               | Walker Corp<br>Submission 151              |
| Traffic       | The FIAB's report 'Railing Port Botany's Containers'<br>demonstrated the importance of the Enfield ILC as a key<br>component of an intermodal network. Once established the<br>intermodal network will help to ease the pressure on<br>Sydney's road network by shifting more freight movements<br>to the rail network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Noted.   | 579               | State Chamber Of Commerce<br>Submission 67 |
| Traffic       | The Property council supports the proposal because it<br>contributes towards a significant reduction in freight<br>movements on the road network, in particular significant<br>reductions in the number of heavy truck using already<br>congested city road networks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Noted.   | 844               | Submission 327                             |
| Traffic       | For intermodal terminals to be commercially viable they<br>also need unimpeded rail and road access to attract<br>business and be well designed and managed. Therefore<br>any integrated planning strategy must ensure that<br>landside links to and from Enfield to port Botany<br>and the motorway network must be designed to encourage<br>terminal use. The terminal operator must engage genuinely<br>with industry to resolve operational issues.<br>NSW RTA also believes it is important to address<br>perceived community concerns regarding rat running by<br>truck drivers. Despite perceptions, this is not a common<br>practice at all, especially for semi trailer and B -double<br>operations, nor is it condoned in any way by NSW RTA.<br>With very few exceptions, operators and their drivers are<br>law abiding and recognise the advantages of the arterial<br>road network. Operationally it is difficult to navigate on local<br>roads. Load limits are respected and abided by except<br>where deliveries need to be made and there is no<br>alternative route. Therefore NSWRTA is confident that 'rat<br>running' would either be a very minor issue or not an issue<br>at all | Noted.   | 845               | NSW Road Transport Inc<br>Submission 326   |

|                | Councils Concerns about the Air Quality Assessment<br>Council concerns with the Air Quality assessment are as<br>follows.                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                            |             |                                                       |
|                | Air Quality Impacts Due to Traffic. We note that the relevant criteria appear not to be exceeded during the operation of the facility. However we also believe that the impacts due to trucks and traffic should have been included in this assessment rather than being treated as a separate                                                                                                              | It would be inappropriate to include the traffic air quality<br>data in the same assessment as that for the site air<br>quality. The impacts assessment for roads is a local<br>one, and the two impact assessments are not                                                                                                                                                                |             |                                                       |
|                | Item, since they are clearly associated with the operational<br>phase of the facility. We would like the operational<br>assessment reviewed to include the combined effects of all<br>equipment and associated traffic and if this is done then we<br>will accept the findings of the assessment regarding<br>operational air quality impacts. However when undertaking                                     | cumulative.<br>Truck and other vehicle movements on the site,<br>however, were included in the site assessment.                                                                                                                                                                                                                                                                            |             |                                                       |
|                | this review it is important that the assumptions about the decrease in traffic movements in some roads be verified, since this clearly has an important bearing on the air quality impacts associated with traffic.                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                            |             |                                                       |
|                | Management of Air Quality Council agrees that there is a<br>need for air quality impacts to be included as part of an<br>Environmental management Plan for the site. It is important<br>however that details of the plan be included in as part of the                                                                                                                                                      | Details of the construction methodology and information<br>on the final design needs to be available in order to<br>provide accurate management measures. The Dust                                                                                                                                                                                                                         |             |                                                       |
|                | EAR, and submitted for consideration before any approval is given to that facility. The plan should include measures                                                                                                                                                                                                                                                                                        | Management Plan would be developed by the Construction Contractor in consultation with DEC and                                                                                                                                                                                                                                                                                             |             |                                                       |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ID          |      |
|                | that will be effective in managing air quality impacts. In this<br>regard, whilst Council would agree with many of the<br>recommendations for managing air quality that is included<br>in the EAR, some appear to need further consideration. For<br>example, the suggestion to comply with "Best Practice" in<br>the selection and use of equipment needs further<br>development, as the feasibility and implications of this<br>recommendation for the proposal are not clear.                                                                                                                                   | SPC. This Plan will provide further details in relation to best practice etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |             |      |
|                | Construction Impacts. Council has a number of concerns<br>regarding air quality during construction: No monitoring of<br>NO2 levels during construction. It is noted that only PM10<br>levels were monitored and not NO2 levels during<br>construction. Whilst we accept that dust would be the main<br>impacts during construction there would also be machinery<br>involved that emit NO2 and which should have been<br>considered in the assessment. Until this has been<br>assessed we remain concerned about air quality impacts<br>during construction.                                                      | Further consideration of the need for NO2 monitoring<br>during construction would be undertaken during<br>preparation of the Construction Environmental<br>Management Plan.                                                                                                                                                                                                                                                                                                                                                                                              |             |      |
|                | Dust Impacts More significantly however we are concerned<br>about the potential dust impacts on some residences in<br>Greenacre during construction.<br>Whilst some of the mitigation measures (the requirement to<br>cease work when the wind speed is over 5m/sec), will<br>manage these impacts to some extent, the relevant figures<br>still show that some residences in Greenacre will be<br>affected by impacts in excess of EPA criteria. The other<br>suggested mitigation measure of ceasing work when the                                                                                               | The EA clearly identified that despite some<br>exceedances of the criteria used, the dust generated by<br>the proposed construction works would be able to be<br>managed adequately. A detailed Dust Management<br>Plan will be developed before construction begins. With<br>the benefits of better knowledge of the construction<br>schedules and methodologies, the DMP will provide<br>more detailed mitigation measures to manage the dust<br>levels so that the criteria are not exceeded. This would<br>include real time monitoring of dust levels and a         |             |      |
|                | wind is blowing from the 210 - 340 sector will have no<br>impact because the affected sites in Greenacre are<br>downwind from this direction. More consideration needs to<br>be given on how to reduce impacts to the residents of<br>Greenacre. For example, was consideration given<br>to ceasing work when the winds were in the 90-180 sector,<br>as this may have been effective in reducing air quality<br>impacts on Greenacre residents.                                                                                                                                                                   | response process to manage them.<br>The PM <sub>10</sub> modelling methodology for construction phase<br>impacts is considered reasonable, whereby initially the<br>modelling was undertaken with no dust controls<br>measures in place, and as expected impacts showed<br>exceedance of the relevant criteria. Various dust control<br>measures were progressively implemented until a level<br>of control was achieved that showed impacts could be                                                                                                                    |             |      |
|                | Additionally, the fact that there may be some exceedances<br>of the criteria is also glossed over to some degree by<br>simple reference to the preparation of a Dust management<br>Plan to help manage impacts, rather than specify specific<br>measures that we could be confident would reduce dust<br>impacts to an acceptable level. If a dust management plan<br>is going to be a recommendation (and we agree that it<br>would be a good idea) then it should be developed in detail<br>and submitted for assessment as part of the assessment<br>process for the proposal, and should include measures that | effectively managed. These controls included sealing of some surfaces that would be otherwise left unsealed, high level watering of the site and wind speed and wind direction restrictions, which may be required. In reality dust impacts will be managed by various means, including the physical controls assumed in the modelling and a sophisticated real-time $PM_{10}$ monitoring program which will advise the construction contractor of any dust impacts within sensitive receiver locations should these occur. The contractor can then (almost immediately) |             |      |

|                | will demonstrate that dust, impacts can be managed to an acceptable level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | alter construction works which may include restriction of<br>works at certain locations in certain wind conditions<br>such that impacts are effectively managed, without any<br>exceedance of the relevant criteria. A protocol will be<br>devised in consultation with DEC to determine the<br>appropriate response to readings greater than 50 ug/m <sup>3</sup> |                   |      |
|                | Other concerns. The EAR refers to a fraction of the PM 10 component, known as the PM 2.5 which is the respirable fraction of PM10, and which may be associated with health impacts. However the EAR does not individually assess impacts of PM 2.5 but says that in the future some assessment of PM 2.5 impacts should be able to be made by assessing the PM 10 impacts. Given that this could be a health related issue we would like confirmation from the relevant Government Health authority that the methodology of assessing PM2.5 impacts in this report is acceptable. | The criteria set by DEC for construction dust is measured as PM10.                                                                                                                                                                                                                                                                                                 |                   |      |
|                | In general, air quality impacts during construction to the residents of Greenacre are of concern to Council, and we requests that more consideration be given to reducing the air quality impacts on the residents if Greenacre. Council intends to provide further information about this matter during the proposed Hearing Panel to be convened for this proposal.                                                                                                                                                                                                             | Noted.                                                                                                                                                                                                                                                                                                                                                             |                   |      |
|                | CONCLUSIONS AIR<br>Air Quality Impacts; 'Council is concerned about the air<br>quality impacts to the residents in Greenacre, particularly<br>during the construction stage. Whilst some mitigation<br>measures have been suggested, these seem to be directed<br>more towards the residents east of the site, rather than the<br>residents in Greenacre.                                                                                                                                                                                                                         | Residential receivers surrounding the site would be considered during preparation of the Dust Management Plan.                                                                                                                                                                                                                                                     |                   |      |

Other intermodal areas will also need to be developed, as identified in the FIAB report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |                                                     |
|                   | <ul> <li>Further, in particular, its close proximity to<br/>residential area makes it unsuitable location for<br/>an intermodal logistics terminal.</li> </ul>                                                                                                                                                                                                                                                                                                                         | The ILC is located within an area surrounded by<br>industrial development save the area south of Cosgrove<br>Road (opposite the proposed community and ecological<br>area)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |             |                                                     |
|                   | <ul> <li>It is recommended that Enfield is an unsuitable<br/>site/location for an intermodal logistics centre<br/>particularly given its very close proximity to<br/>residences and findings of the Milton Morris AO<br/>report.</li> </ul>                                                                                                                                                                                                                                            | Enfield is considered to be a suitable site for providing a distribution network for container imports and exports whose origin or destination is in the inner and middle western suburbs of Sydney.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |                                                     |
|                   | An intermodal is not supported however, if there is a need<br>for one it should be established further to the west of<br>Sydney, which is the targeted area and final destination<br>for over 60% of the freight passing through the proposed<br>Enfield site.                                                                                                                                                                                                                         | The FIAB report prepared as part of the Government's<br>Metropolitan Intermodal Freight Strategy for Import and<br>Export Containers (refer Metropolitan Strategy –<br>Transport Strategy for Sydney) supports the need for<br>the Enfield ILC as part of a number of intermodal<br>terminals required to serve the Sydney Basin and to<br>achieve the Governments mode share target.<br>As identified in the FIAB report a number of smaller<br>intermodal terminals are proposed close to the market to<br>reduce trucking distance to and from the terminal to<br>distribution points. The FIAB also indicated that, not<br>withstanding the industrial growth in the west and south<br>west, there is a need for an intermodal facility in the<br>central western Sydney industrial area to meet local and<br>sub-regional requirements, and that the proposed site at<br>Enfield should be developed for that purpose |             |                                                     |
| Alternative Sites | Whilst it is understood and accepted that a significant<br>increase in cross-metropolitan rail freight movement is<br>necessary to cater for anticipated growth for the future, it is<br>questionable if Enfield is the most suited location to<br>achieve this                                                                                                                                                                                                                        | See above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 832         | Strathfield Council<br>DoP Submission Nos 121 & 159 |
|                   | The Operation Terminal should be closer to the containers<br>final destination by rail. Serious consideration should be<br>given to a "Sydney Wide" Intermodal based at Ingleburn<br>that is closer to the documented final destination of all<br>freight. It also has heavy rail facilities and a<br>number of motorway options. This in my opinion would<br>prove to be more cost effective and would provide a quality<br>logistic infrastructure, with long-term expansion for the | Chapter 3 of the EA identified that the inner and middle western area of Sydney (in which the proposed ILC is located) receives up to 56% of the incoming container traffic through Port Botany. This comprises up to about 800,000 TEU per year. The development of the ILC will provide the opportunity for 300,000 TEU to be brought to the area by rail (instead of by truck). Intermodal facilities will need to be further developed in the south west (near                                                                                                                                                                                                                                                                                                                                                                                                                                                         |             |                                                     |
|                   | Sydney Basin<br>Current access to all freeways and motorways require<br>heavy vehicles passing residential areas. These include                                                                                                                                                                                                                                                                                                                                                        | Ingleburn) and in the west of Sydney, to cater for future<br>growth in those areas.<br>Existing heavy vehicles currently pass the residential<br>areas. The M4, M5 and M7 motorways can all be                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |             |                                                     |

| amenity/quality of life | Through community consultation local residents have<br>expressed a number of concerns in regard to this proposal<br>including road congestion, noise from road and rail traffic,<br>air pollution, general loss of amenity due to 24 hour<br>operation, increased traffic accidents, possible hazardous<br>incidents and loss of on street parking.<br>Further investigation is required to determine the full impact<br>of the proposal on the local residents and community<br>before a decision is made on whether the proposal should<br>proceed | The potential impacts on community amenity were<br>described in detail in Chapter 17 of the EA. The potential<br>for amenity impacts on residents in close proximity to<br>the ILC included noise, air pollution, hazard spills and a<br>number of traffic and pedestrian issues and mitigation<br>measures to address these were described.<br>Further consideration of impacts during construction<br>and operation will be undertaken during detailed design<br>and mitigation and management measures incorporated<br>into the appropriate construction and operational<br>management plans.                                                                           | 832         | Strathfield Council<br>DoP Submission No121 &159  |
| amenity/quality of life | Light trespass and sky glow produced by artificial lighting<br>are serious matters which have well known adverse effects<br>upon the natural environment and also upon human health.                                                                                                                                                                                                                                                                                                                                                                 | Light spill has been modelled from a series of points<br>correlating to the closest residences. This indicated that<br>the proposed lighting would be successfully contained<br>within the site. The light levels at the nearest residential<br>development would be virtually imperceptible to people<br>in those areas.                                                                                                                                                                                                                                                                                                                                                  | 832         | Strathfield Council<br>DoP Submission No 121 &159 |
|                         | Apart from sleep disturbance in humans, there is also<br>emerging evidence that night time lighting may play a role<br>in the increased incidence of negative health effects.<br>Reference should be made to Australian standards such as<br>AS 4282-1997, Control of the obtrusive effects of<br>outdoor lighting. It would also be reasonable to expect that<br>the Department will request computer modelling of any<br>proposed lighting installation.                                                                                           | The light fittings will be visible from most of the key viewpoints identified within the visual assessment. However, these would not be expected to change the night landscape as the lights would be focused downwards and would be part of a landscape already containing a large number of light sources. Lighting on site would be designed to meet AS4282 Control of Obtrusive Effects. Consultation will be undertaken with rail corridor owners regarding their lighting requirements to ensure the proposed lighting on the site does not significantly affect adjacent rail operations. Screen planting will also be strategically placed to prevent light spill. |             |                                                   |
|                         | Heavy goods vehicles will seriously impact on residential<br>areas on a regional basis, including pollution, noise,<br>vibration, traffic delays, pavement deterioration, road<br>safety issues just to mention a few.                                                                                                                                                                                                                                                                                                                               | These issues have been addressed as part of the EA.<br>Impacts on a regional basis will be negligible due to the<br>limited numbers of trucks generated by the proposal in<br>the context of the regional road network performance.                                                                                                                                                                                                                                                                                                                                                                                                                                        |             |                                                   |
|                         | The local community have expressed justifiable concerns<br>regarding traffic congestion, noise, and heavy vehicles on<br>local roads in residential areas, increased traffic accidents<br>all conducive to increased truck movements daily.                                                                                                                                                                                                                                                                                                          | The marginal increase in traffic volumes on roads surrounding the ILC site would be small (less than 1%).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |             |                                                   |
|                         | Local community members raised concerns regarding the<br>actual or perceived traffic increases on local roads and the<br>associated safety, noise and air quality impacts from such<br>traffic movements                                                                                                                                                                                                                                                                                                                                             | The actual increase in traffic volumes associated with<br>the ILC has been documented in Chapter 7 of the<br>Environmental Assessment. This is approximately 1% of<br>the total traffic volume.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |             |                                                   |

# Submissions Council: AMENITY/QUALITY of LIFE

| Issue Category          | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Response                                                                                                                                                                                                                                                                                                                                                                                                         | Stakeholder | Name                                               |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------------------------------------------------|
|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                  | ID          |                                                    |
| amenity/quality of life | There is major concern that the increased operation of the freight line will result in a significant deterioration of amenity for residents living nearby arising from this proposal and the Government's freight strategy. This proposal will contribute to potential noise impacts                                                                                                                                                                                                                                                                                                                                                                       | Social issues such as amenity were addressed in<br>Chapter 17 of the EA. The effects on amenity for<br>residents will be limited, with potential impacts able to be<br>managed by appropriate mitigation measures. These<br>will be better defined during the detailed design<br>processes and implemented during construction and<br>operation of the ILC.                                                      | 816         | Canterbury Council<br>DoP Submission Nos 157 & 162 |
|                         | The findings of the EA are that the operation of the site<br>without mitigation measures would result in the NSW DEC<br>Industrial Noise Criteria, and Sleep Intrusiveness Criteria<br>levels being exceeded. Even with mitigation measures in<br>place (it is proposed to erect sound barriers), maximum<br>noise levels may still be exceeded when wind conditions<br>are adverse. This is an unsatisfactory situation of which the<br>EA concludes there are no further solutions available to<br>further mitigate noise.                                                                                                                               | Operational scenarios were carefully considered to<br>ensure they represented the site operating at full<br>capacity. Predicted impacts are considered worst-case,<br>as they assume all activities are occurring at once,<br>which may not occur in reality. Further development of<br>mitigation measures and the modelling of these have<br>been undertaken to ensure the criteria will be able to be<br>met. |             |                                                    |
| amenity/quality of life | Council considers that a more detailed investigation of<br>these matters should be undertaken. Most importantly, if<br>the proposal is to be approved then there needs to be<br>careful thought given to the mitigation measures that will be<br>needed to ensure that the proposal can operate without<br>undue impacts on the residents of Greenacre. Should<br>further information on the management of impacts be<br>obtained, then any effective mitigation measures should be<br>included in conditions of approval, and the facility subject to<br>on going monitoring of the environmental impacts and the<br>efficacy of the mitigation measures. | Environmental Management plans for construction and<br>operation would be prepared. These will identify and<br>implement further mitigation measures to manage<br>impacts associated with the construction and operation<br>of the site.                                                                                                                                                                         | 815         | Bankstown Council<br>DoP Submission No 164 & 328   |

| approval processes | Strathfield Municipal Council would like to be made aware<br>of any submission that Sydney Ports Corporation makes in<br>response to the issues raised in the submissions to the<br>Director- General or if the Sydney Ports Corporation were<br>to submit a preferred project report outlining the changes to<br>the project or revised statement of commitments (under<br>s75H(6) of the EP&A Act). | Noted.<br>The Preferred Project Report and responses to issues<br>raised will be provided by SPC to the Department of<br>Planning. | 832               | Strathfield Council<br>DoP Submission Nos 121 &<br>159 |
|                    | We seek to be fully informed of any changes to the<br>proposed project that is made after the public exhibition<br>period irrespective of their significance as it we believe it<br>impacts or is likely to impact in our local government area.                                                                                                                                                      | Noted. The PPR will include any proposed changes to the ILC proposal.                                                              |                   |                                                        |

# Submissions Council: COMMUNITY and ECOLOGICAL AREA

| Issue Category                | Comments                                                                                                                                                                                                                                                                                                                                                            | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Stakeholder<br>ID | Name                                                  |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|-------------------------------------------------------|
| Community and Ecological Area | The ecological area provides an opportunity to provide<br>secure habitat for the species if it is appropriately designed<br>and linked into a network of habitat in Greenacre. The<br>target carrying capacity of the Ecological area needs to be<br>coordinated and established.                                                                                   | The Frog Habitat Area will be constructed according to<br>the detailed design prepared, which would take into<br>consideration the carrying capacity. This area would be<br>managed according to an appropriate Frog<br>Management Plan. Monitoring of the Frog Habitat Area<br>will be undertaken to ensure it is functioning as<br>designed.                                                                                                                   | 832               | Strathfield Council<br>DoP Submission Nos 121<br>&159 |
|                               | The proposed Community + Ecological Area is a<br>worthwhile concept and should be vested in Council<br>ownership as Community land so it may be open to the<br>general public with the exception of ecologically sensitive<br>areas. The land should be protected with appropriate<br>caveats on title and open space and environmental<br>protection land zonings. | SPC will consult DEC and Strathfield Council over the management of the Frog Habitat Area. Opportunities for future ownership, land use zoning and management will be determined at a later date.                                                                                                                                                                                                                                                                |                   |                                                       |
|                               | A detailed Landscape design of the Proposed Community<br>+ Ecological Area needs to be completed with input from<br>Council. The costs for maintenance of this area should be<br>levied from Enfield ILC.                                                                                                                                                           | Landscape design and species planting would be<br>prepared as part of the detailed design process. Species<br>selected for the site would be endemic to the area and<br>sourced from local provenance. SPC will consult<br>Strathfield Council during the preparation of the detailed<br>Landscape Plan.                                                                                                                                                         |                   |                                                       |
|                               | Street Trees on Cosgrove Rd should be retained and<br>enhanced as suggested in the strategy. Further Screen<br>Planting with locally indigenous plants should be provided<br>along Wentworth Rd North.                                                                                                                                                              | The concept landscape plan includes for landscape treatment of the Cosgrove Road frontage.                                                                                                                                                                                                                                                                                                                                                                       |                   |                                                       |
|                               | Considering the size and impact of this proposed<br>development it is requested that the following contributions<br>be made to the local community:<br>the ownership of the proposed<br>Community/Ecological Area is handed over to<br>Council; and<br>Sydney Ports contribute to the full cost of the<br>ongoing maintenance of this facility.                     | SPC will consult with Strathfield Council regarding<br>ownership and maintenance of the Community and<br>Ecological Area.                                                                                                                                                                                                                                                                                                                                        |                   |                                                       |
| Community and Ecological Area | The ecological area provides an opportunity to provide<br>secure habitat for the species if it is appropriately designed<br>and integrated into a network of habitat in Greenacre.<br>However not enough detail has been provided regarding<br>the size and design of the habitat and on the position, size<br>and adequacy of corridor linkages.                   | Detailed design of the frog habitat area would be<br>undertaken as part of the detailed design phase with<br>input from frog specialists and landscape architects. The<br>plans would allow integration into the Greenacre habitat<br>network, the new Enfield Marshalling Yards frog pond<br>area and Juno parade site. The corridors would be<br>5-10m wide and constructed with a central depression<br>and groupings of rocks to encourage the collection of | 832               | Strathfield Council<br>DoP Submission No 121<br>& 159 |

# Submissions Council: COMMUNITY and ECOLOGICAL AREA

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Response                                                                                                                                                                                                                                                                                                                                          | Stakeholder<br>ID | Name |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|------|
|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | rainwater and formation of small temporary pools. The provision of frog ramps in and out of Coxs Creek may also be provided to assist win the migration of frogs up and down stream.                                                                                                                                                              |                   |      |
|                | Bell frogs have been sighted by Council staff and local<br>residents as far away from the site as Elliot Reserve and<br>Clement St in South Strathfield. It is presumed that these<br>frogs have dispersed via the Enfield Marshalling Yards.<br>Such corridor linkages will be important to ensure the<br>population does not become isolated and increasingly<br>vulnerable.                                                                                                                                                                             | See above comment.                                                                                                                                                                                                                                                                                                                                |                   |      |
|                | A detailed Landscape design of the Proposed Community<br>+ Ecological Area needs to be completed utilising Safer by<br>Design Principles with Input from Council taking into<br>consideration compatible recreation uses. The costs for<br>maintenance of this area should be levied from Enfield ILC.<br>Prior to earthworks a phase 1 contamination report should<br>be completed.                                                                                                                                                                       | A detailed landscape plan for the community and<br>ecological area would be prepared as part of the<br>detailed design phase. Exotic species would be<br>removed and replaced with locally occurring species.<br>The focus being on providing habitat for local native<br>species. Consultation will be undertaken with council<br>during design. |                   |      |
|                | The proposed Community & Ecological Area, Street Trees<br>and screen plantings are considered worthwhile concepts,<br>however the proposal lacks detail and could be improved<br>for community benefit, Council proposes the following<br>amendments: -                                                                                                                                                                                                                                                                                                    | To be developed as part of the detailed design phase.                                                                                                                                                                                                                                                                                             |                   |      |
|                | Council ownership as Community Land (under section 26 of the Local Government Act 1993) upon completion of the reserve. The reserve should be open to the public, with the exception of ecologically sensitive areas such as the frog habitat area. This includes the tarpaulin shed.                                                                                                                                                                                                                                                                      | SPC will consult with Strathfield Council regarding<br>ownership and maintenance of the Community and<br>Ecological Area.                                                                                                                                                                                                                         |                   |      |
|                | As a contribution to the local community it is requested that<br>the ownership of the proposed Community/Ecological Area<br>be handed over to Council and Sydney Ports contribute to<br>the full cost of the ongoing maintenance of this facility, as is<br>outlined in the section on 'Community/Ecological Area and<br>Street Trees'. Ongoing future management, ownership and<br>maintenance of the habitat area needs to be determined<br>via management plans, funding, covenants or agreements.<br>An appropriate land use planning mechanism should | SPC will consult with Strathfield Council regarding<br>ownership and maintenance of the Community and<br>Ecological Area.                                                                                                                                                                                                                         |                   |      |

# Submissions Council: COMMUNITY and ECOLOGICAL AREA

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Stakeholder<br>ID | Name |

| Consultation Process | Consultation with local bus providers and State Transit<br>Authority is deemed necessary to provide additional public<br>transport services to the area to cater for the increased<br>demand.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Further consultation would be undertaken during preparation of the Local Area Traffic Management Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 832               | Strathfield Council<br>DoP Submission No 121          |
|                      | There is also a requirement for existing bus stops to be<br>upgraded and the installation of new bus stops with<br>appropriate signage and markings as per RTA regulations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | The upgrade of existing bus stops and the provision of new bus stops is a matter for relevant State Government agencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                   |                                                       |
| Consultation Process | While it is noted that the applicant proposes to letterbox 11,000 residents in the area around the site with a newsletter about the proposal (which will also be available at Councils) and also will make information available through a website, there is no way of knowing how much of the specific consultation criteria we specified will be fulfilled.                                                                                                                                                                                                                                                                                                                                                                                                                      | The consultation requirements of the Department of Planning (as specified in the EA requirements) were met.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 816               | Canterbury Council<br>DoP Submission Nos 157 &<br>162 |
|                      | While the minimum requirements for exhibition is met by<br>having a 41 day exhibition period, half of this period was<br>within the Christmas School Holiday period when many<br>people are away. For such a major project the choice of<br>time to exhibit the EA is poor and does not enhance the<br>credibility of the consultation process. Given the technical<br>nature of the information in the EA this period of time is also<br>far too short to make a proper assessment of many aspects<br>of the proposal, as well as allowing lead time to report<br>to and fit in with Council meeting times and deadlines.                                                                                                                                                         | The exhibition period was decided and controlled by the<br>Department of Planning. It lasted from 9 January to 20<br>February 2006, taking into account the holiday period,<br>and accordingly was longer than the statutory period<br>required under the Environmental Planning and<br>Assessment Regulation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                   |                                                       |
| Consultation Process | Council's review of the environmental aspects of the<br>proposal are included in the following section of this<br>submission. However, before dealing with these issues, it<br>is necessary to place on record Councils concerns about<br>the degree of consultation between Sydney Ports and<br>Council during the preparation of this EAR.                                                                                                                                                                                                                                                                                                                                                                                                                                       | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 815               | Bankstown Council<br>DoP Submission Nos 164 &<br>328  |
|                      | We consider that Sydney Ports level of consultation with<br>Council has been disappointing for a proposal of this<br>significance and magnitude. Other than participation in a<br>Traffic Working Group with Sydney Ports, the RTA and<br>Strathfield Council, we were not adequately consulted<br>before the EAR was lodged. Bankstown Council had<br>requested consultation as part of the preparation of the<br>EAR to ensure that any concerns that we may have about<br>the proposal's impacts on residents of Bankstown could be<br>addressed in the preparation of the EAR - not after it has<br>been lodged. We had made this request clear in a letter to<br>Sydney Ports and to the Minister for Ports that explicitly<br>requested a Briefing before the EAR was lodged | Community consultation process involved 1800 number,<br>email, fax and address for any contact and questions<br>throughout EA development process. A regularly<br>updated web site also provided information about the<br>project, the development process and the way by which<br>the community could have its say. Two community days<br>were held - one in May 2005 to outline process of<br>assessment and seek views from residents and groups,<br>and a second in February 2006 during the exhibition of<br>the EA. Council briefings were held for Strathfield,<br>Bankstown, Canterbury, Burwood and Marrickville at the<br>beginning of the process and during the exhibition of the<br>EA. Briefings were offered to a number of community<br>groups. These were accepted by NOPE and the South<br>West Environment Centre. Three newsletters were<br>widely distributed in the area, by direct mail distribution<br>to about 11,000 households, via Councils and mailed to<br>a database of business owners, community groups ands<br>residents. The newsletters were distributed in March |                   |                                                       |

#### Submissions Council: CONSULTATION PROCESS

| CO<br>Wh<br>imp<br>est<br>furt<br>woi<br>cor<br>req | DMMENTS FROM LETTERS IN 2005<br>hilst Council has been consulted about potential traffic<br>pacts through a traffic sub-Committee that has been<br>tablished, I must advise you that Council does expect<br>ther consultation about the entire proposal before we<br>build feel that the Director General's requirement for<br>insultation has been satisfied. We are therefore<br>questing a briefing prior to lodging any documents | period was decided and controlled by the Department of<br>Planning. It lasted from 9 January to 20 February 2006,<br>taking into account the holiday period, and accordingly<br>was longer than the statutory period required under the<br>Environmental Planning and Assessment Regulation.<br>Sydney Ports will continue to consult with the<br>community during construction and operation of the ILC,<br>should it be approved. It will provide for Community<br>Liaison Groups throughout the construction and<br>operation of the ILC, as part of this continued<br>consultative process. |  |  |

#### Submissions Council: contamination

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Stakeholder<br>ID | Name                                                    |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|---------------------------------------------------------|
| contamination  | A Remediation Action Plan (RAP) is required prior to<br>remediation work commencing. This would be prepared in<br>accordance with DEC guidelines, SEPP 55 and the<br>Contaminated Land Management Act 1997. This RAP<br>should include provisions for inspection and validation of<br>soils beneath existing structures when they are removed<br>and any hotspots that are uncovered during site<br>development works. Following remediation, all exposed<br>surfaces are to be validated to ensure that all TPH,<br>asbestos and heavy metal contamination has been<br>removed.                                                                                                                                                                                                                   | A RAP is to be prepared and identified contamination to<br>be remediated prior to earthworks commencing. Soils<br>from beneath removed buildings would be visually<br>inspected and testing undertaken if evidence of<br>contamination is present or if the soils are observed to<br>be different from the surrounding area.<br>Validation testing of remediated hotspots and all<br>exposed surfaces is to be undertaken to ensure<br>contaminant levels are below threshold levels defined<br>within the RAP. | 832               | Strathfield Council<br>DoP Submission No 's 121<br>&159 |
|                | Further investigations are required to determine the significance and extent of contamination in certain areas including the area west of Stockpile 4 in regards to elevated concentrations of arsenic that exceed the Open Space criteria, and the DELEC site in regards to TPH and copper concentrations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Further investigations are to be undertaken into the contamination hotspot (Arsenic-As) within the proposed Community and Ecological area to determine the significance and extent of the elevated levels prior to assessing remediation options. The copper and TPH hotspots identified in the DELEC area are to be remediated through excavation and disposal (Copper) and landfarming (TPH).                                                                                                                 |                   |                                                         |
| contamination  | No mention has been made to the threat of contamination<br>to the population of Green and Golden Bell Frog, which is a<br>threatened species under the Threatened Species<br>Conservation Act 1995. Of particular concern is the arsenic<br>concentration to the west of Stockpile 4 within the<br>Community and Ecological Area. The statement that the<br>required remediation work will be Category 2 under the<br>provisions of SEPP 55 may be incorrect if this contaminant<br>is likely to have a significant effect on this threatened<br>species according to Clause 9 (c).                                                                                                                                                                                                                | Further investigations are to be undertaken into the contamination hotspot (As) within the proposed Community and Ecological area to determine the significance and extent of the elevated levels.<br>A risk assessment would be undertaken to determine the threat to sensitive receptors including the GGBF.<br>This information would be used to assess remediation options, if required.                                                                                                                    | 832               | Strathfield Council<br>DoP Submission Nos121 & 159      |
|                | It appears as though the contamination assessment has<br>been carried out without mention of the toxicity of<br>contaminants to the population of Green and Golden Bell<br>Frog, which is classified as a threatened species. Of<br>particular concern is the arsenic concentration to the west<br>of Stockpile 4 within the Community and Ecological Area.<br>Whilst the criteria for risk to the environment and human<br>health has been discussed no mention has been made of<br>what threat the concentrations found are to the frogs, which<br>are generally considered as sensitive due to the nature of<br>their skin. This fact is interesting to note because one of the<br>triggers for Category 1 remediation under SEPP 55 is a<br>likely significant effect on a threatened species. | See above comment. It is not considered that the<br>remediation would have a significant effect on the<br>GGBF. It will improve the quality of the habitat.                                                                                                                                                                                                                                                                                                                                                     |                   |                                                         |
|                | The Site Contamination Assessment has not considered<br>the risk presented by contamination in the Community and<br>Ecological Area on the population of Green and Golden<br>Bell Frog, which is a threatened species.<br>Further investigations to determine the<br>significance and extent of contamination is                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | See above comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                   |                                                         |

| contamination  | The riverbed of the Cooks River contains elevated levels of<br>some metals (certainly above water quality guidelines).<br>The EA indicates that the site is currently contributing<br>heavy metals (particularly lead and zinc) to Coxs Creek (a<br>tributary of the Cooks River). The proposed water quality<br>treatment proposed would only result in a minor decrease<br>in the lead, copper and zinc currently entering Coxs Creek.<br>It is considered the EA should investigate options for water<br>quality treatment that would deliver a greater reduction in<br>the heavy metal load that the site is currently contributing. | The proposed development will not contribute to<br>increased levels of metals in the Cooks River. The water<br>quality devices proposed will contribute to an overall<br>improvement in water quality entering Coxs Creek.<br>Stormwater runoff and management were addressed in<br>the EA in Chapter 10 and would be further considered<br>as part of detailed design. | 816               | Canterbury Council<br>DoP Submission Nos 157 & 162 |

| Design         | The Visual Impact of the proposal has not been adequately<br>addressed and mitigated. The visual impact of tall stacks of<br>shipping container, site infrastructure, warehouses and the<br>road bridge will be visible from many adjacent and nearby<br>publicly accessible roadways, overpasses and residential<br>areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Views from key viewpoints around the site were<br>considered as part of the EA. Visual screening will be<br>provided through planting, noise attenuation mounds<br>and treatment of Cosgrove Road frontages.                                                                                                      | 832               | Strathfield Council<br>DoP Submission Nos 121 &<br>159 |
|                | Additional site perimeter landscape screen/buffer planting is required to mitigate this detrimental visual impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | See above comment. Noise mounds surrounding the site will be planted with local species selected for their screening properties where required.                                                                                                                                                                   |                   |                                                        |
|                | If approval is granted for the Enfield Intermodal Proposal,<br>the following conditions related to the disposal of<br>stormwater runoff and stormwater management, should be<br>applied:<br>1. A detailed drainage study and report is to be prepared<br>by a suitably qualified hydraulics engineer, demonstrating<br>that the development has no adverse effects on adjoining<br>properties as a result of flooding and stormwater runoff and<br>that there is adequate protection for buildings against the<br>ingress of surface runoff. In addition the report required in<br>above should demonstrate that the site discharge does not<br>exceed predevelopment flows. Storms for 2, 10, 20 and<br>100 years, ARI shall be assessed to determine the critical<br>storms and peak discharges for the pre and post<br>development conditions. Details shall be submitted to and<br>accepted by Council's Manager Engineering & Works<br>Services prior to the issue of a Construction Certificate. | Stormwater runoff and management were addressed in<br>the EA in Chapter 10 and Appendix D. More detailed<br>hydraulic studies will be undertaken as part of the<br>detailed design.<br>The basic principle that the development shall have no<br>external impacts for the accepted ARI events will be<br>applied. |                   |                                                        |
|                | 2. In areas where flooding problems have occurred (e.g. Wentworth Street at the Mayvic Street), or there is a risk of such occurrence, separate flood study or drainage analysis of the catchment shall be carried out by the applicant's consultant. Also catchment analysis shall be carried out for each conduit that traverses the site, in accordance with the current practices and principles outlined in "Australian Rainfall & Runoff'. Hydraulic grade line calculations are required for any pipe systems where flows are in excess of 100 l/s. Details shall be submitted for approval of Council's Manager Engineering & Works Services prior to the issue of a Construction Certificate.                                                                                                                                                                                                                                                                                                 | The ILC site will not provide a solution for existing<br>stormwater problems external to the site, nor will they be<br>studied in any detail. However, the basic principle<br>outlined above will be applied.                                                                                                     |                   |                                                        |
|                | 3. On-site stormwater detention storage shall be provided<br>in conjunction with the stormwater disposal system. The<br>storage system shall be designed in accordance with<br>Council's Stormwater Management Code. Details of the<br>storage system shall be submitted to and approved by<br>Council prior to the issue of a Construction Certificate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Noted.                                                                                                                                                                                                                                                                                                            |                   |                                                        |
|                | 4. Stormwater runoff from each sub-catchment area shall be collected and discharged to the existing downstream drainage conduit via the On-site Stormwater Storage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Due to the nature of the site and the capacity of existing<br>external stormwater systems, the most appropriate<br>solution is to construct a large stormwater detention                                                                                                                                          |                   |                                                        |

|                                           | Diversion of flows to southern end of the site and discharge of stormwater runoff to Cox's Creek, which is already under capacity, is not acceptable.                                                                                                                                                                                                                                                                                                                                   | network at the southern end near Coxs Creek. This will<br>be designed to ensure predevelopment discharges are<br>not exceeded for normal ARI criteria.                                                                                                                                  |  |

| 5<br>c<br>s<br>f<br>f<br>t<br>t<br>C<br>C | 5. The existing and proposed drainage conduits and pipe<br>systems draining the upstream catchment and the<br>development site should comply with an ARI standard<br>shown in the table below, with suitable treatment of all<br>surface flows to 1 in 100 year ARI standard. Where surface<br>low paths are not available, the pipe standard should rise<br>o 100 yr ARI.<br>Pipe System - ARI Standards Residential 20 yrs<br>Commercial / Industrial 50 yrs<br>DSD range 2 to 100 yr | Due to the area and nature of the site, the size of the<br>culvert required to pipe up to the 100 yr ARI is<br>impracticable. It is proposed that up to the 10 year ARI<br>be piped and up to the 100 yr ARI be provided with an<br>overland flow path with no runoff outside the site. |  |
| 6<br>ק<br>ק<br>ר                          | 6. The loss of 10,000m3 flood storage as a result of the<br>proposed development, stated in SKM report is not<br>acceptable. The applicant must demonstrate that the<br>proposed cut and fill mentioned in consultants report does<br>not have adverse impact on the overland flow path.                                                                                                                                                                                                | Noted.                                                                                                                                                                                                                                                                                  |  |
| 7<br>c<br>¢<br>fl                         | 7. Surface runoff from upstream properties is to be<br>catered for, obstructions that cause darning and backwater<br>effects on the upstream properties are not permitted.<br>Adequate surface flow paths shall be provided to convey all<br>lows to the 1 in 100 year standard.                                                                                                                                                                                                        | See comments above.                                                                                                                                                                                                                                                                     |  |
| 8<br>tr<br>b<br>c<br>c<br>S<br>S          | 3. Open drainage system components are to be designed<br>o meet relevant safety criteria. Storage basins are to have<br>battered slopes for egress, maximum ponding depths, and<br>appropriate signage and fencing. The possibility of failure<br>of components of the system must be considered, and<br>provision shall be made for the safe conveyance of flows<br>should failure occur.                                                                                              | Noted.                                                                                                                                                                                                                                                                                  |  |
| g<br>c<br>n<br>v<br>v<br>C<br>l           | Drainage easements in favour of relevant owners shall be created over the existing drainage line located within the development site for the purpose of constructing and maintaining stormwater drainage structures. The easement width shall be the pipe diameter plus 1.0m with a minimum width of 2.4m Council shall approve the wording of the dedication prior to odgement at Land & Property Information NSW.                                                                     | This matter will need to be assessed. It is unlikely that SPC will agree to new easements that affect the development.                                                                                                                                                                  |  |
| 1<br>c<br>n<br>s<br>E<br>C                | 10. The footings shall be located clear of the easement and<br>designed by a practising structural engineer (holding<br>nembership with Engineers Australia). Details are to be<br>submitted to and approved by Council's Manager<br>Engineering Works & Services prior to the issue of a<br>Construction Certificate.                                                                                                                                                                  | See note above.                                                                                                                                                                                                                                                                         |  |
| 1<br>c<br>c<br>a                          | 15. No buildings and structures are permitted over<br>drainage lines or within easements and<br>overland flow paths. Clearances to easement boundaries<br>are required to prevent structural<br>oads on drainage structures or encroachment within the                                                                                                                                                                                                                                  | Overland flow paths will be designed to take account of<br>the location of proposed buildings. The ILC design will<br>take account of loads on existing drainage structures<br>and mitigating measures will be taken where necessary.                                                   |  |

| angle of repose of the soil.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                               |  |

| 11. The proposed drainage lines connecting to Council's or<br>Sydney Water's drainage system shall be constructed prior<br>to commencement of works on site in accordance with<br>Council's and Sydney Water's requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | The drainage system cannot be constructed until<br>existing significant mounds of earth are redistributed<br>around the site to achieve design levels. Sedimentation<br>ponds will be constructed early in the development<br>works to deal with site runoff. |  |
| The utility services within the area of effect of the proposed drainage works (i.e. gas, water, sewer, electricity, telephone, etc) shall be physically located and the applicant's contractor shall confirm the minimum clearance between the utility service and the drainage pipe with the relevant authorities prior to the commencement of drainage works on site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Noted                                                                                                                                                                                                                                                         |  |
| Electricity and telecommunication cabling shall be "placed<br>underground at the applicant's expense from the<br>development site to the main power lines and<br>telecommunication cables in accordance with the<br>specifications of Energy Australia and telecommunications<br>suppliers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Noted                                                                                                                                                                                                                                                         |  |
| The following work must be carried out:<br>(a) Where the property is located on the opposite side of<br>the street to the main power lines and telecommunication<br>cables, the house services are to be placed underground<br>from the development site to the nearest location on the<br>opposite side of the street for connection to the<br>existing mains supply as directed by Energy Australia and<br>the telecommunications carrier. The method of<br>construction across the road carriageway shall be by<br>directional boring beneath the road pavement; or,<br>(b) Where the property is located on the same side of the<br>street as the main overhead power lines and<br>telecommunication cables, all services are to be placed<br>underground across the full width of the frontage of the site.<br>Any overhead power lines and telecommunication cables<br>that cross the road from the development site must also be<br>placed underground and the cabling installed and<br>distributed to properties in accordance with the Supplier's<br>and Carrier's requirements.<br>29. Prior to the issue of a Construction Certificate the<br>applicant must contact:<br>(a) The Engineer Planning and Supply Negotiations<br>(West) Energy Australia on 131 535, to obtain a quotation<br>to underground power supply lines and where appropriate<br>a quotation to underground the main overhead power<br>supply lines adjacent to the frontage of the subject<br>property. | Utilities assessment undertaken as part of the EA in<br>Chapter 4 and Appendix L. More detailed studies will be<br>undertaken as part of the detailed design.                                                                                                 |  |
| An easement shall be created in favour of electrical and<br>telecommunications suppliers and comply with the<br>following:<br>(a) For the provision of underground services and above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Noted                                                                                                                                                                                                                                                         |  |

| ground pillar boxes for access to their equipment;                       |                                                   |  |
|--------------------------------------------------------------------------|---------------------------------------------------|--|
| (b) The easement is to be 3m wide abutting the property                  |                                                   |  |
| boundary at the point of entry and 1.5m within the property;             |                                                   |  |
| (c) Where the easement is to be enclosed, a minimum                      |                                                   |  |
| headroom of 2m is required above the floor level; and                    |                                                   |  |
| (d) The wording of the easement shall be                                 |                                                   |  |
| approved by Energy Australia and the                                     |                                                   |  |

| On Site Car-Parks - Vehicular carparking has not been<br>indicated for private or company cars with the site. Shade<br>tree and screen planting should be indicated to Carpark<br>areas in accordance with the requirements of Councils<br>Development Control Plan No. 27 - Industrial development.<br>Carpark requirements include shade tree planting (every 8<br>carspaces) and screen planting.                                                                                                                                                                                                                                                                                           | The concept design as provided in the EA is to be<br>expanded during the detailed design phase. This will<br>include details for landscape planting and for on-site<br>parking. On-site parking will be provided for all<br>employees. |  |
| It will potentially be necessary to create a carpark within<br>this compound area relating to the function of the buildings<br>and vehicle and pedestrian access into this area.<br>Landscape design and plant selection to match the<br>Architectural period should be used to enhance the context<br>and integrity of the heritage buildings, increase the amenity<br>for staff using the buildings and to screen/soften the impact<br>of the surrounding site operations.                                                                                                                                                                                                                   | This would be provided as part of the detailed design,<br>which would be prepared in accordance with the EA and<br>any relevant DCPs.                                                                                                  |  |
| Light Industrial/Commercial Development<br>Landscape screen/buffer planting has not been indicated<br>between the proposed Light Industrial Development and<br>Cosgrove Road (other than Street tree planting to<br>Cosgrove Road). Sydney Port's representatives have<br>previously stated that the light industrial area development<br>along Cosgrove Road would be planned in accordance<br>with Councils Development Control Plan No. 27 -<br>Industrial Development (DCP 27). DCP 27 indicates the<br>specific landscaping requirements that should be provided<br>including the specific details and depth of front setback and<br>screen planting and the carpark shade tree planting. | Landscape and plant selection would be designed as far<br>as practicable to be consistent with the requirements of<br>DCP27.                                                                                                           |  |
| Perimeter Screen Planting - Improve the extent, depth and<br>height of the screen/buffer planting to the perimeter of the<br>site to screen the visual impact of the site from the<br>surrounding public roads and residential areas. This<br>includes screening the: container storage areas (potential<br>16 metre high stacks consisting of unsightly vividly<br>coloured and rusty containers), Gantry Cranes and also the<br>large buildings such as Warehouses. This screen planting<br>is to include:                                                                                                                                                                                   | DCPs would be considered in developing the landscape design plans.                                                                                                                                                                     |  |
| <ul> <li>a) extending the planting to the full perimeter of the site including the full extent of the western boundary of the site (eg to the western side of the dedicated rail siding to the 'Intermodal Terminal Site' and to the western side of the two 'Empty Container Storage Areas') and to the eastern side of 'Warehouse F';</li> <li>b) increasing the width and planting quantity and height (through mounding and/or tree species selection) to all perimeter screen/buffer planting areas;</li> <li>c) mass planting the northern most corner of the site to</li> </ul>                                                                                                         |                                                                                                                                                                                                                                        |  |

| minimise the visual impact as seen from the Roberts Road                         |                                                            |  |
|----------------------------------------------------------------------------------|------------------------------------------------------------|--|
| overpass and from Liverpool Road.                                                |                                                            |  |
|                                                                                  |                                                            |  |
| Detail Master Planning - Detail Master Planning is required                      | Visual screening and habitat provision would be the        |  |
| for all areas of the site indicating:                                            | primary considerations when preparing the landscape        |  |
| a) full urban design and landscape design of the site.                           | design plan. These comments would be taken into            |  |
| b) detail planting schemes of all landscape areas                                | consideration when developing the detailed landscape       |  |
| b) detail planting schemes of all landscape areas                                |                                                            |  |
| including, plant locations, plant species, container sizes,                      | pian.                                                      |  |
| quantities etc;                                                                  |                                                            |  |
| c) perimeter landscape screen/buffer planting to the full                        |                                                            |  |
| extent of the site;                                                              |                                                            |  |
| <ul> <li>d) mass planting the northern most corner of the site;</li> </ul>       |                                                            |  |
| <ul> <li>e) street tree planting to all internal roads;</li> </ul>               |                                                            |  |
| <li>f) increase landscaping within the site (eg surrounding</li>                 |                                                            |  |
| buildings) to improve amenity;                                                   |                                                            |  |
| g) vehicular carparking is to be indicated with shade tree                       |                                                            |  |
| planting (every 8 carspaces) and screen planting to edges;                       |                                                            |  |
| h) additional screen and tree planting (including                                |                                                            |  |
| opportunities for additional street tree planting) outside the                   | Local species proposed for acoustic mounds.                |  |
| site that could mitigate impacts of the proposal eg beside                       |                                                            |  |
| Roberts Road, Wentworth Road and Cosprove Road etc                               |                                                            |  |
|                                                                                  |                                                            |  |
| Light Industrial/Commercial Development                                          | Shrubs and trees proposed for porth west corner of site    |  |
| The landscape requirements for the proposed Light                                | to provide screening                                       |  |

| <ul> <li>Webber St.</li> <li>The pedestrian / cycle link would provide scope for extension to the Bankstown area in the future.</li> <li>Provision should be made to extend this cycleway arm through the site to provide a transport link for the local residents.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | SPC is not proposing any on-site bicycle pathways.                                                                                                                                                                                                                                                                                                 |  |
| Intermodal Terminal Area - The Unloading Area including<br>the container stacks (maximum 13 metre high) and 3<br>Gantry Cranes (assumed to be in excess of 13 metres<br>high), and the Light Towers (25m tall) will be potentially<br>visually significant. Perimeter screen/buffer planting to the<br>western edge of the site and screen planting along the<br>western side of Wentworth Road could minimise this<br>impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Views from key viewpoints around the site were<br>considered as part of the EA. Visual screening will be<br>provided through planting, noise attenuation mounds<br>and treatment of Cosgrove Road frontages. Noise<br>mounds surrounding the site will be planted with local<br>species selected for their screening properties where<br>required. |  |

|        | Road Bridge - The Road bridge over the Enfield<br>Marshalling yards to Wentworth Road even with the<br>proposed 'simple and unobtrusive' design will be a<br>significant new structure. The frequent usage of the bridge<br>by large trucks hauling vividly coloured shipping containers<br>will greatly contribute to the visual impact of the bridge.<br>Additional planting to the eastern side of Wentworth Road<br>would assist in decreasing the visual impact areas to the<br>west of the site. | See above comment |     |                                                      |

| flora and fauna | The Enfield Marshalling Yard site is one of three key<br>properties for the Greenacre population of Green and<br>Golden Bell Frogs, i.e. Enfield Marshalling Yard, 1-7 Juno<br>Pde and Coxs Creek Reserve. These frogs are one<br>population and utilise each individual allotment in<br>Greenacre for the different parts of its life cycle<br>requirements. Development over the last 10 years in<br>Greenacre has seen a major reduction and fragmentation<br>of foraging habitat and movement corridors. The<br>Environmental Assessment states that the Enfield<br>Marshalling Yards contains marginal habitat for Bell - frogs.<br>Although true, each individual lot in Greenacre contains<br>marginal habitat. It is the combination of these sites that<br>provides the total habitat. As such it is not appropriate to<br>consider the site in isolation, but rather as a key component<br>of a series of fragmented habitats that when considered<br>together make up the total habitat.<br>No mention has been made to the threat of contamination<br>to the population of Green and Golden Bell Frog, which is a<br>threatened species under the Threatened Species<br>Conservation Act 1995. Of particular concern is the arsenic<br>concentration to the west of Stockpile 4 within the<br>Community and Ecological Area. The statement that the<br>required remediation work will be Category 2 under the<br>provisions of SEPP 55 may be incorrect if this contaminant<br>is likely to have a significant effect on this threatened<br>species according to Clause 9 (c). | Detailed design of the frog habitat area would be<br>undertaken as part of the detailed design phase with<br>input from frog specialists and landscape architects. The<br>plans would allow integration into the Greenacre habitat<br>network, the new Enfield Marshalling Yards frog pond<br>area and Juno parade site. The corridors would be<br>5-10m wide and constructed with a central depression<br>and groupings of rocks to encourage the collection of<br>rainwater and formation of small temporary pools. The<br>provision of frog ramps in and out of Coxs Creek may<br>also be provided to assist win the migration of frogs up<br>and down stream. This area would be managed<br>according an appropriate Frog Management Plan.<br>Monitoring of the Frog Habitat Area will be undertaken to<br>ensure it is functioning as designed. | 832               | Strathfield Council<br>DoP Submission No 121 &<br>159  |
| flora and fauna | The Environmental Assessment states that the site<br>contains marginal habitat for Bell - frogs. Although true,<br>each individual lot in Greenacre contains marginal habitat.<br>It is the combination of these sites that provides the total<br>habitat. As such it is not appropriate to consider the site in<br>isolation, but rather as a key component of a series of<br>fragmented habitats that when considered together make<br>up the total habitat. The Green and Golden Bell-frog<br>recovery plan identifies this population as one of only 8 key<br>populations in Sydney.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Connectivity between frog habitats would be a key consideration when designing the frog habitat area (see comment above).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 832               | Strathfield Council<br>DoP Submission Nos 121 &<br>159 |
|                 | No baseline information is provided in the EA on the total<br>population of Greenacre Bell Frogs and<br>as such the overall goal or carrying capacity of the<br>Ecological area is unknown. This needs to be coordinated<br>and established between Sydney Ports, the Department of<br>Environment and Conservation and Strathfield Council.<br>Such consideration will assist in determining the balance<br>between habitat and community functions in the<br>ecological/community use area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | The Frog Habitat Area will be constructed according to<br>the detailed design prepared, which would take into<br>consideration the carrying capacity. This area would be<br>managed according to an appropriate Frog<br>Management Plan. Monitoring of the Frog Habitat Area<br>will be undertaken to ensure it is functioning as<br>designed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                   |                                                        |

# Submissions Council: Flora & Fauna

| There are significant quantities of noxious and<br>environmental weeds on site. Removal will need to take<br>into account protection of Green and Golden Bell frogs<br>particularly if herbicides are employed on site.                                                                                                                                                                                                                                                        | A Landscape Management Plan would be prepared for<br>the construction phase which will include a program of<br>weed removal and revegetation with native species.<br>The risk of herbicide use on GGBF would be considered<br>during preparation of the management plan. Weeds<br>would be removed in accordance with NSW Department<br>of Primary Industries weed control guidelines                                                                                                                                                                                                                                                                                                                                          |  |

| All site planting including the site entrance area is to be<br>plant species indigenous to the area of local provenance to:<br>protect the integrity of the neighbouring remnant bushland,<br>maximise the flora and fauna biodiversity and habitats<br>within the site, and reduce water demand. The heritage<br>period planting scheme for the areas surrounding the<br>Heritage Items to be retained should be species selected to<br>match the relevant historic period/s. | Landscape design and species planting would be<br>prepared as part of the detailed design process. Species<br>selected for the site would be endemic to the area and<br>sourced from local provenance. Plants will be installed<br>at sizes that maximise their chances of survival and<br>species selected that will be robust and hardy, requiring<br>relatively low maintenance and watering. The planting<br>will be responsive to the local site conditions such as<br>land-fill areas, excavated cuttings, drainage swales and<br>depressions, wind exposure, soil types and vehicle<br>emissions. Species which match the relevant historic<br>period would be selected where they satisfy the criteria<br>noted above. |  |
| Planting - All site planting, including the site entrance area,<br>is to be plant species indigenous to the area of local<br>provenance except for heritage period planting scheme for<br>the areas surrounding the Heritage Items to be retained.                                                                                                                                                                                                                             | See above comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
| Street Trees on Cosgrove Rd should be retained and<br>enhanced as suggested in the strategy. Further Screen<br>Planting should be provided along Wentworth Rd North;<br>the use of locally indigenous plants that have been<br>successful along this road, should be considered. The<br>proposed noise walls should feature increase vegetative<br>screening and be covered in tough climbers to prevent<br>graffiti vandalism.                                                | Screen planting is proposed around the site. Indigenous<br>species would be used in plantings.<br>Mounded noise slopes will be planted with native trees,<br>shrubs and groundcovers.<br>The design of the noise walls will be determined during<br>detailed design phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| Use of indigenous trees and plants sourced from local seed from the Cox's Creek                                                                                                                                                                                                                                                                                                                                                                                                | Species selected for the site would be endemic to the area and sourced from local provenance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| Noxious Weeds - Noxious Weeds must be eradicated from the site prior to construction to prevent their spread on and off site.                                                                                                                                                                                                                                                                                                                                                  | A Landscape Management Plan would be prepared for<br>the construction phase which will include a program of<br>weed removal and revegetation with native species.<br>Weeds would be removed in accordance with NSW<br>Department of Primary Industries weed control<br>guidelines                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |

| Heritage/Archaeology | The former Enfield Marshalling Yards site as a whole is of<br>heritage significance in illustrating the history and former<br>use of the site. A comprehensive development history and<br>historical survey of the site is required before further<br>demolition or relocation occurs.                                                                                                                                                                                                  | Any items of heritage value to be removed or relocated from the site will be archivally recorded.                                                                                                                                                                                                                                                                                                                            | 832               | Strathfield Council<br>DoP Submission Nos 121 &<br>159 |
|                      | The surviving significant historic built elements which contribute to the historic legibility of the site should be preserved on site.                                                                                                                                                                                                                                                                                                                                                  | Items are to be preserved or relocated within the site where possible.                                                                                                                                                                                                                                                                                                                                                       |                   |                                                        |
|                      | For example the Administration Building and Yard Masters<br>Office should be retained and utilised as part of the site<br>operations and the pillar water tank, gantry crane and<br>pedestrian footbridge should be relocated to contextually<br>appropriate locations within the site.                                                                                                                                                                                                 | The proposed site layout does not provide opportunities<br>for retention for the Administration Building and Yard<br>Master's office. Options for reuse of the pillar water tank,<br>gantry crane and pedestrian footbridge are to be<br>explored during the detailed design phase.                                                                                                                                          |                   |                                                        |
|                      | It is feasible to relocate one or both sections of the state<br>significance former Tarpaulin Factory without substantial<br>loss of significance particularly as it is a reassembled<br>building.                                                                                                                                                                                                                                                                                      | Management options for the Tarpaulin Shed are to be<br>further developed in consultation with the Heritage<br>Office and the local community.                                                                                                                                                                                                                                                                                |                   |                                                        |
| Heritage/Archaeology | Landscaping to Heritage Buildings - The Administration<br>and Yard Masters buildings are to be retained on site due<br>to their heritage significance (refer to Heritage Section).<br>The retention of these buildings will involve securing the<br>immediate area surrounding the two heritage buildings<br>from the adjacent site operations such as the Intermodal<br>Area to the north and Empty Container Storage to the<br>south.                                                 | There is no scope for retention for these items within the<br>proposed site layout. Full archival recording of these<br>items will be undertaken prior to demolition.                                                                                                                                                                                                                                                        | 832               | Strathfield Council<br>DoP Submission Nos 121 &<br>159 |
|                      | Landscaping to Heritage Buildings<br>For the heritage buildings that should be retained on site eg<br>Administration Building and Yard Masters Building, the<br>landscape design and plant selection is to match the<br>Architectural period. This landscaping should be used to<br>enhance the site context and integrity of the heritage<br>buildings, increase the amenity for staff using the buildings<br>and to screen and soften the impact of the adjacent site<br>operations.  | The landscape plan will be prepared with consideration<br>of the historic context of the site. The planting will be<br>responsive to the local site conditions such as land-fill<br>areas, excavated cuttings, drainage swales and<br>depressions, wind exposure, soil types and vehicle<br>emissions. Species which match the relevant historic<br>period would be selected where they satisfy the criteria<br>noted above. |                   |                                                        |
|                      | Possible Demolition of northern section (addition) of the tarpaulin shed (garages) to improve vision and access into Community + Ecological Area.                                                                                                                                                                                                                                                                                                                                       | The Tarpaulin Shed has been identified as being of heritage significance and options for reuse are to be investigated as part of the detailed design phase.                                                                                                                                                                                                                                                                  |                   |                                                        |
|                      | <b>Demolition of Yard Master's Office -</b><br>the removal of the verandahs, chimneys and roof tower<br>(are noted in the GBA report) as having a high impact on<br>the significance of this building. Other alterations including<br>the bricking up of windows and a door to the verandah.<br>While these have had some impact on the significance of<br>the building, removal of such elements is not unusual. All of<br>these elements that could be reconstructed and the original | The Yard Master's office has been assessed as being of local significance due to fabric losses. Full archival recording of this item would be undertaken prior to demolition.                                                                                                                                                                                                                                                |                   |                                                        |

| Potential Loss of Remaining Evidence of Railway Lines<br>The extent of surviving railway tracks does not appear to<br>adequately accessed. As items that have presumably be<br>in the ground for more than 50 years, these could be<br>considered to be archaeological relics and, under the NS<br>Heritage Act, an archaeological permit is required to distu<br>these unless an exemption permit is granted. The railwa<br>tracks would provide good evidence of the layout of the<br>yard at the end of the period of use of the site as a<br>marshalling yard. This, compiled with aerial photographs<br>and early site plans, could allow a better recording of the<br>history of this site.                                                                                                                                                                                          | The majority or railway lines previously present on site<br>have been removed. A permit is not required as the<br>project is exempt from such approvals as it is a Major<br>Project assessed under part 3A of the EP&A Act.<br>W<br>A heritage interpretation plan and strategy will be<br>y prepared for the site prior to construction works<br>beginning. This will include a recording of the history of<br>the site. |  |

| Downstream of the site, residents in Cosgrove Road at<br>Coxs Creek report inundation of their properties in<br>significant rainfall events. Sydney Water also indicated that<br>there are known flooding problems at Water Street, where<br>Coxs Creek meets the Cooks River                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | The ILC site will not provide a solution for existing<br>stormwater problems external to the site, nor will they be<br>studied in any detail. However, the basic principle that<br>the development shall have no external impacts for the<br>accepted ARI events will be applied. Flooding issues<br>would be considered during preparation of hydrological<br>and drainage plans as part of the detailed design phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 832                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Council has carried out a preliminary assessment of the<br>hydrology and hydraulics report prepared by SKM. It is<br>noted that the proposed method of stormwater runoff<br>management outlined in the report does not meet Council's<br>standard requirements and is not acceptable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Stormwater runoff management has been satisfactorily discussed in the EA. It will be addressed in detail during the detailed design phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Enfield Intermodal Logistics Centre (ILC) must maintain storm water detention basins.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | A detention basin would be constructed at the southern<br>end of the site, immediately north of Coxs Creek. This<br>would also be used to treat run off prior to discharge.<br>The detention basin would be designed to ensure post<br>development peak flows do not exceed<br>pre-development peak flows. The performance of the<br>basin system will be maintained by SPC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| The applicant's consultant in his report has made reference<br>to four individual drains that traverse the site. It appears<br>that Council's 600mm reinforced concrete pipe that drains<br>the upper section of Roberts Road sub-catchment area<br>also traverses the site. Council's existing 600mm<br>reinforced concrete pipe on the upstream of end of the<br>catchment shall be physically located. Capacity and<br>condition of the pipe shall be verified. If it is found that the<br>pipe is under capacity or it is in poor condition, then the<br>pipe shall be replaced in full length to 1 in 20 ARI standard.<br>- All pipe laying and construction works shall comply with<br>the requirements of any Australian standards and codes,<br>as well as manufacturer's specifications. Occupational<br>Health & Safety and Workcover legislation requirements<br>are to be adhered to at all times.<br>- For reinforced concrete pipes (RC) and fibre reinforced<br>cement (FRC) pipes, spigot and socket rubber ring joints<br>are required. All other materials are to be to the<br>manufacturer's specifications for jointing.<br>All pits in public roads are to be constructed in reinforced<br>concrete, and kerb inlet pits in accordance with Council's<br>standard drawing 284-13.<br>- Stormwater runoff from the development site that has the<br>potential of contamination by specific pollutants shall<br>require treatment and be discharged in accordance with | Noted.<br>Stormwater, runoff and management were addressed in<br>the EA in Chapter 10. More detailed studies will be<br>undertaken as part of the detailed design. |---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|--------------------------------------------------------|
| justification for project | The Victorian Government also proposed to improve freight<br>transportation by rail from 10% to 30% by 2010. SKM's<br>findings resulted in an estimation of 3.34 million container<br>moves for the calendar year 2002. The alarming statistics<br>documented indicates that 80.9% of moves were by road<br>and only 19.1% of containers moved by rail. As the Enfield<br>site has been modelled on Melbourne operations, the<br>statistics outlined above would certainly raise the question<br>'Is the NSW Government policy to increase freight<br>transported by rail actually achievable?'                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | The Enfield site has not been modelled on Melbourne<br>intermodals. The Melbourne data was used to provide<br>advice on the daily profile of container movements from<br>an intermodal site, not the total which would be switched<br>from road to rail. In any case, whether the NSW Policy is<br>achievable is a matter for the NSW Government and the<br>proposed ILC at Enfield forms a part of that policy.                                                                                                                                                                                                                                               | 832           | Strathfield Council<br>DoP Submission Nos 121 &<br>159 |
|                           | During the Sydney 2000 Olympic Games, restrictions were<br>placed on operations at Port Botany. To overcome this,<br>Port Kembla was efficiently and effectively used with no<br>disruptions to business or trade. As a result of this, it has<br>been shown that containers can be moved from Port<br>Kembla to western Sydney quicker than they can from Port<br>Botany. This option should be considered to reduce truck<br>movements in the Enfield area as the majority of containers<br>and their contents are destined for sites west of Enfield. It is<br>understood that the current Darling Harbour / White bay<br>terminal operations are to be relocated to Port Kembla in<br>the future yet this has not been referred to in the proposal<br>and any future impact that it may have on the proposed ILC<br>site at Enfield.                                                                                                                                                                                                                                                                  | The EA states clearly that up to 56% of the containers<br>into Sydney via Port Botany are transported to the inner<br>and middle western areas of Sydney. This is effectively<br>the catchment of the ILC at Enfield. Transport from Port<br>Kembla to this catchment area would not be more<br>efficient that the proposed arrangement.<br>The White Bay operations relate to motor vehicle<br>transport, not containers. There will be no impact or<br>interaction with the ILC site at Enfield.                                                                                                                                                             |               |                                                        |
|                           | Surely the primary objective of any rail freight transport<br>strategy should be to relieve congestion on the road<br>network. Strathfield Municipal Council strongly requests<br>that a broader consideration of the rail freight transport<br>strategy for the Sydney Metropolitan area be conducted.<br>Sydney Ports frequently refer to the site of the proposed<br>Enfield ILC as being at the centroid of the market that it<br>serves. The reality, however, is that the Enfield site is at the<br>western end of the "neck of a funnel" 18 km long. The<br>market referred to being predominantly to the west of the<br>chosen site. The proposed site merely transfers road<br>network access from a point of congestion at Foreshore<br>Road and General Holmes Drive to an alternatively<br>congested part of the road network at Enfield. It would<br>appear to be far more beneficial to locate any such<br>Intermodal Logistics Centre further west to the actual<br>centre of the market being serviced, thereby utilizing rail for<br>a greater proportion of the overall transport task. | SPC to consider the response to this comment in line<br>with other studies undertaken and in consideration of<br>the review undertaken as part of the Metropolitan Rail<br>Strategy.<br>The site of the ILC at Enfield is the most appropriate,<br>available site to service the catchment. There are no<br>appropriate sites available in the western part of the<br>inner and middle western catchment. Sites will be<br>developed in the future in the western and south<br>western areas of Sydney, but it would be inefficient to<br>transport to those sites by rail and then transport back to<br>the inner and middle western catchment area by truck. |               |                                                        |
| justification for project | The FIAB report goes some way towards this, but is still not<br>an adopted strategy. Until there is an adopted strategy,<br>development of an Intermodal Logistics Centre at Enfield is<br>considered to be premature.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | The FIAB report prepared as part of the Government's<br>Metropolitan Intermodal Freight Strategy for Import and<br>Export Containers (refer Metropolitan Strategy –<br>Transport Strategy for Sydney) supports the need for<br>the Enfield ILC as part of a number of intermodal<br>terminals required to serve the Sydney Basin and to                                                                                                                                                                                                                                                                                                                        | 816           | (Canterbury Council<br>DoP Submission Nos 157 &<br>162 |

The operation of the ILC would be<br>managed through the Operational Environmental<br>Management Plan to minimise impacts to local residents<br>and the environment. |                   |                                                        |
|                | A Works Permit shall be obtained from Council's Customer<br>Service Centre at least 48 hours prior to undertaking any<br>works on public/Council controlled areas. This includes any<br>work on the nature strip, footpaths, driveways, stormwater<br>outlets, Council's drainage, kerb & guttering and roadways.<br>The permit must be retained on site at all times and<br>produced on request from any Council Officer.                  | All necessary and relevant permits would be obtained prior to works commencing.                                                                                                                                                                                                                                                                 |                   |                                                        |
|                | Enfield ILC a comprehensive incident management plan<br>needs to be provided to demonstrate how the operators of<br>the Enfield ILC propose to manage the impacts of an<br>incident involving dangerous goods and vehicles carrying<br>dangerous goods.                                                                                                                                                                                     | An incident management plan will be prepared prior to the opening of the Intermodal Logistics Centre.                                                                                                                                                                                                                                           |                   |                                                        |
|                | It is recommended that appropriate site operation hours for<br>this proposal, should the proposal be approved, be 6.00am<br>to 10pm Monday - Friday and 8.00am to 10.00pm on<br>Saturdays and at no time on Sundays. This is to ensure<br>that most of the affects of the proposal such as noise and<br>traffic impacts from the site operation and associated truck<br>and rail movement will not occur outside the hours of<br>operation. | It is proposed that the ILC would operate 24 hours a day<br>7 days a week. The operation of the ILC would be<br>managed through the Operational Environmental<br>Management Plan to minimise impacts to local residents<br>and the environment.                                                                                                 |                   |                                                        |
| management     | A curfew be imposed from 2200hrs - 0600hrs Monday -<br>Friday and 2200hrs - 0800hrs Saturday and at no time on<br>Sunday to minimise traffic and noise pollution.                                                                                                                                                                                                                                                                           | It is proposed that the ILC would operate 24 hours a day<br>7 days a week. The operation of the ILC would be<br>managed through the Operational Environmental<br>Management Plan to minimise impacts to local residents<br>and the environment.                                                                                                 | 832               | Strathfield Council                                    |
|                | No storage of goods, material, equipment, machinery, refuse, or refuse bins (including industrial waste containers) and the like shall take place on the public footpath or carriageway during development of the site unless the specific written approval of Council has been given and subject to further conditions and payment of fees for the use of Council's land.                                                                  | All waste and equipment will be stored on the ILC site<br>and managed through the Construction and Operation<br>Environmental Management Plans.                                                                                                                                                                                                 |                   |                                                        |

#### Submissions Council: MANAGEMENT

|            | <ul> <li>If approval is granted the following conditions should apply:</li> <li>During the detailed design stage a suitably qualified contamination consultant shall be employed to further investigate the areas of the road bridge western landing point, road bridge footings, rail network connection points and around acoustic barrier walls for possible contamination.</li> <li>The remediation work being classified as Category 2 should be reassessed in light of whether the contamination in the Community and Ecological Area is likely to pose a significant risk to the Green and Golden Bell Frog, which is a threatened species.</li> </ul> | Investigations would be undertaken in off site areas<br>identified during the detailed design phase. These would<br>be completed by a suitably qualified contaminated land<br>specialist.<br>Further investigations are to be undertaken into the<br>contamination hotspot (As) within the proposed<br>Community and Ecological area to determine the<br>significance and extent of the elevated levels of the<br>heavy metal previously identified. A risk assessment<br>would be undertaken to determine the threat to sensitive<br>receptors including the GGBF. This information would<br>be used to assess remediation options. |     |                        |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|------------------------|
|            | <ul> <li>A Remediation Action Plan (RAP) is required<br/>prior to remediation work commencing. This<br/>would be prepared in accordance with DEC<br/>guidelines, SEPP 55 and the Contaminated<br/>Land Management Act 1997. This RAP should<br/>include provisions for inspection and validation<br/>of soils beneath existing structures when they<br/>are removed and any hotspots that are<br/>uncovered during site development works.</li> </ul>                                                                                                                                                                                                         | A RAP is to be prepared and identified contamination to<br>be remediated prior to earthworks commencing. Soils<br>from beneath removed buildings would be visually<br>inspected and testing undertaken if evidence of<br>contamination is present or if the soils are observed to<br>be different from the surrounding area.<br>Validation testing of remediated hotspots and all<br>exposed surfaces is to be undertaken to ensure<br>contaminant levels are below threshold levels defined<br>within the RAP.                                                                                                                      |     |                        |
|            | <ul> <li>All the recommendations contained in both of the<br/>site audits shall be implemented.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | The recommendations from audits, EA and required off-site investigations would be included in the RAP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |     |                        |
|            | <ul> <li>Following remediation all exposed surfaces are<br/>to be validated to ensure that all TPH, asbestos<br/>and heavy metal contamination has been<br/>removed</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | See comment above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |     |                        |
|            | An excavation permit or exemption permit under the NSW<br>Heritage Act should be obtained prior to disturbing any<br>footings or railway tracks remaining in the ground.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | As the project is a Major Project, subject to Part 3A of<br>the EP&A Act, the Heritage Office advises that an<br>excavation permit under the Heritage Act will not be<br>required. The Heritage Office will, however, be<br>consulted during the process of excavation.                                                                                                                                                                                                                                                                                                                                                              |     |                        |
| management | Council considers that there is a need for a detailed<br>Environmental Management Plan to be prepared to help<br>manage impacts during both the construction and<br>operational phases of the facility.<br>Council supports the preparation of EMPs for both the                                                                                                                                                                                                                                                                                                                                                                                              | An Environmental Management Plan is to be prepared<br>for both Construction and Operation Phases. See<br>Chapter 21.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 815 | Bankstown City Council |
|            | construction and operational phases of the facility.<br>However, it is considered that the EAR includes only an<br>outline of what should be included in the EMP, and that<br>they need to be prepared to a much greater level of detail.                                                                                                                                                                                                                                                                                                                                                                                                                     | The EMPs would be prepared by the Construction<br>Contractor once details of the construction methodology<br>and final design are available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |     |                        |

#### Submissions Council: MANAGEMENT

| Previous sections of this submission have identified areas<br>of concern to Council, and noted that the recommendations<br>fro some measures such as a noise management plan and<br>a dust management plan need to be thought through and<br>developed to a higher degree of detail before there can be<br>confidence that they will reduce impacts to an acceptable<br>level. In the case of noise, and perhaps also air quality<br>impact it is fair to say that there will be impacts of a<br>significant level unless these issues are managed properly,<br>so in Councils view, the proposal should not be approved<br>until a appropriate mitigation measures are put in place and<br>ongoing measures to manage these impacts are identified<br>and prescribed as conditions for approval. | See comment above.                                                                                                                             |  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|--|
| As well as the inclusion of specific means to mitigate<br>impacts, the EMP should identify responsibilities for<br>implementing its recommendations, as well as for regular<br>monitoring of its effectiveness, and reporting of the<br>environmental performance of the facility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | The EMP would include named personnel with specific responsibilities for implementing, monitoring and managing specific environmental impacts. |  |
| It would also be appropriate for a Consultative Committee<br>to be established that includes representatives from<br>Bankstown and Strathfield Councils as well as Sydney<br>Ports, the Department of Planning and perhaps other<br>agencies to provide ongoing review of the environmental<br>performance of the facility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | A Community Liaison Committee would be established as detailed in Chapter 21 of the EA.                                                        |  |
| CONCLUSIONS MANAGEMENT<br>Environmental management. Council considers that there<br>is a need for a detailed Environmental Management Plan to<br>be prepared to help manage impacts during both the<br>construction and operational phases of the facility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | These plans would be prepared prior to construction commencement on site.                                                                      |  |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                   | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Stakeholder<br>ID | Name                                                   |

| Noise          | Whilst it could be argued that Sydney Ports Corporation<br>does not have responsibility for the noise impact from<br>locomotives travelling to and from the Intermodal Logistics<br>Centre (ILC) at Enfield, Council believes that the State<br>Government does, and therefore the Environmental<br>Assessment (EA) report should consider the bigger picture<br>and include this issue in the assessment. | The appropriate approach to the management of effects<br>from the rail freight line corridor is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 832               | Strathfield Council<br>DoP Submission Nos 121 &<br>159 |
|                | The proposed ILC will have an adverse impact on nearby residences in the Cosgrove Rd/Blanche St area from construction noise in adverse weather conditions during the construction phase even with mitigation measures in place.                                                                                                                                                                           | <b>Construction noise</b><br>Construction noise was assessed in the report to the<br>nearest affected residential receivers, as these were<br>closer to the site than other sensitive receivers,<br>including St. Anne's School and Strathfield South High<br>School. Further to this the Strathfield South High School<br>is shielded from the site by the industrial area to the<br>north of the site and the existing noise wall along the<br>southern boundary of the school. There are no DEC<br>criteria that distinguish appropriate levels for residential<br>receivers versus non-residential receivers and impacts<br>at non-residential locations would be similar to or less<br>than those identified for residential locations. Therefore<br>the assessment that has been undertaken for the<br>construction phase noise is considered appropriate.<br>SPC will seek to maintain the construction times as<br>specified in the EA. However, an undertaking will be<br>provided, and written into the Noise Management Plan,<br>that high noise operations will not be undertaken after<br>1pm on Saturdays. |                   |                                                        |
|                | The modelling of noise impacts from road traffic and the conclusion that no exceedances or significant impact will result from road traffic are seriously questioned due to inaccurate traffic volume data.                                                                                                                                                                                                | <b>Road Traffic noise</b><br>The project is not responsible for existing road traffic<br>noise levels. The contribution to traffic noise from this<br>project is calculated to be in the order of 0 – 0.2dB(A) at<br>residential receiver locations – refer to the RT&A<br>Technical Memo (Appendix E). Such a small traffic<br>noise increase is considered minor, insignificant and<br>inconsequential. Furthermore, the NIA found that<br>mitigation of existing noise, through the provision of<br>noise barriers for residences is not possible as driveway<br>access to roads is required. Therefore it would not<br>reasonable and feasible to reduce traffic noise levels.<br>The assessment carried out in the NIA, compares 2016<br>traffic noise levels (with II C) to 2006 future-existing                                                                                                                                                                                                                                                                                                                   |                   |                                                        |

|                | <ul> <li>impacts from locomotives using the dedicated freight rail line between Port Botany and the proposed site. It should also include measurements from an existing port facility at Botany and extrapolate predicted noise from the data, and model and assess noise impacts from predicted road traffic using accurate traffic volume data.</li> <li>Construction noise may exceed the NSW DEC construction noise criteria even with the recommended noise mitigation measures.</li> <li>Proposed construction hours will exceed those recommended by the ENCM guidelines.</li> <li>Noise predictions for road traffic noise are jeopardised by inaccurate existing traffic volumes.</li> <li>Predicted noise exceedances of up to 15dB(A) for site A1 and 6dB(A) for site A2 may occur under the most adverse wind conditions.</li> </ul>                                                                                                                                                                                                                                   | More detailed assessment has been carried out and is<br>presented in the PRP (RT&A Technical memo attached<br>in Appendix E). Mitigation measures will be further<br>developed during preparation of the Noise Management<br>Plans at Construction and Operational phases.                                                                                                      |                   |                                                            |
| Noise          | <ul> <li>The treatment of noise assessment of train noise on this line in the EA is considered to be inadequate for a number of reasons that are outlined below: <ul> <li>The EA is using second hand noise assessment information which it has not independently critiqued. The basis for this noise assessment conclusion is also not provided.</li> <li>The EA seems to mask this critical impact in with overall noise impact.</li> <li>Also no consideration has been given to the noise differences between freight trains and City Rail passenger trains.</li> </ul> </li> <li>The EA has not considered noise and vibration mitigation measures including train scheduling, curfews and physical measures as requested.</li> <li>This assessment should take into consideration the recent Rail Infrastructure Corporation/State Rail Authority Interim Guidelines for Consideration of Rail Noise and Vibration in the Planning Process. If residential areas do not meet these standards then the EA should address actions that are needed to overcome this.</li> </ul> | The appropriate approach to the management of effects<br>from the rail freight line corridor is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor. | 816               | Canterbury City Council<br>DoP Submission Nos 157 &<br>162 |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Stakeholder<br>ID | Name                                                 |

|                | There is a wider issue that needs to be considered which is<br>of the noise and vibration impacts arising from the future<br>operation of the freight line. No overall assessment has<br>been made of these impacts. As train movements are<br>projected to triple in the next 20 years, this assessment is<br>considered critical. With such an assessment it can be<br>determined if such increases are environmentally<br>acceptable. If works are required to be undertaken to<br>mitigate impacts, then these should be planned for. While<br>the Enfield proposal will not result in all of this impact, it will<br>contribute to it and should proportionately contribute for<br>any noise mitigation measures required.<br>Noise generated by construction activities may also<br>potentially exceed NSW DEC criteria, the assessment is<br>inappropriately vague about this issue. In the EA is<br>suggested consideration only of noise mitigation<br>measures. Again this is an unsatisfactory situation for<br>affected residents. Appropriate measures should be put in<br>place to create an acceptable level of construction noise. If<br>noise impacts arising from both the construction and<br>operation of the site cannot be satisfactorily mitigated the | The construction noise impact assessment required to<br>identify impacts was prepared at a stage when many<br>assumptions are made about the construction process.<br>More detailed assessment would be carried out as part<br>of the CNVMP, when construction details including<br>specific plans and equipment are known. Appropriate<br>mitigation measures would be considered at this time.                                                                                                                                                                                                                                                                                                                                                                                                                              |                   |                                                      |
| Noise          | <ul> <li>Proposal should not proceed in its current form.</li> <li>Noise impacts</li> <li>Council has concerns about noise impacts. In spite of the findings of the EAR there are concerns that a significant number of residents in Greenacre could be affected by noise during the construction and operation of the facility. There are also concerns that the proposed mitigation measures will not be effective, and that the noise impacts have been underestimated.</li> <li>Noise Impacts; Council has concerns about noise impacts during both the construction and operational phases. We are concerned about the predicted noise levels included in the EAR, many of which exceed relevant criteria, and the fact that even these noise levels may have been underestimated, and that the proposed mitigation measures will not be effective.</li> <li>Councils Concerns about the Noise Assessment. Council is extremely concerned about the likely noise impacts on residents of Greenacre that will result from this</li> </ul>                                                                                                                                                                                                                                 | Construction Noise<br>Construction noise was assessed in the report to the<br>nearest affected residential receivers and the<br>assessment that has been undertaken for the<br>construction phase noise is considered appropriate.<br>Mitigation measures will be further developed during the<br>preparation of a Construction Noise Management Plan.<br>SPC will seek to maintain the construction times as<br>specified in the EA. However, an undertaking will be<br>provided, and written into the Noise Management Plan,<br>that high noise operations will not be undertaken after<br>1pm on Saturdays.<br>Operational Noise<br>Mitigation options were extensively reviewed as part of<br>the EA. It is considered that at this stage of the project,<br>when the design is still fairly flexible, all reasonable and | 815               | Bankstown Council<br>DoP Submission Nos 164 &<br>328 |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Stakeholder<br>ID | Name |

|                | proposal both during construction and operation. Reasons<br>for Councils concerns are as follows:<br>Concerns about the Assessment Technique.<br>a) Omission of Truck Noise<br>Council is concerned that traffic noise from trucks that are<br>associated with the facility has not been included in the<br>overall noise assessment. Whilst trucks that are moving<br>within the facility are considered, trucks associated with the<br>facility but which have just left (and may for example be on<br>Wentworth St) appear to have been omitted. However,<br>given that there will be about 1160 trucks per day (or close<br>to 50 trucks per hour which is almost 1 per minute on<br>average) these trucks would very likely contribute to the<br>overall noise environment. Nevertheless, they have not<br>been included in the total noise assessment, but instead<br>have been assessed separately. This may mean that<br>the noise impacts from the facility have been<br>underestimated.<br>b) Impact of south-easterly winds<br>Council is also concerned that the impact of south easterly<br>winds which have been assessed and shown to produce<br>noise exceedences may have been underestimated. The<br>reason for this concern is that in the section of the EAR<br>on air quality impacts (Fig 5.1 in Appendix F in Vol 3) it also<br>states that south easterly winds can be an issue in Spring<br>as well as summer. Spring south easterly winds have not<br>been factored into the noise assessment, and at the<br>very least it appears that there is an inconsistency in the<br>methodology for the assessment of wind on noise impacts<br>and on air quality impacts. However, given that the south<br>easterly winds help to produce significant exceedances of<br>the noise criteria, it is likely that if they also occurred in<br>Spring, then moreexceedances would occur, and the<br>extent of noise impact would be much higher than<br>predicted.<br>Concerns about the Impacts of Construction Noise. Council<br>is concerned about the likely noise impacts to the residents<br>in the suburb of Greenacre during construction. The results<br>show that there will be significant exceedance<br>of the noise crit | feasible mitigation measures have been considered to<br>reduce overall noise emissions from the site. Additional<br>mitigation will need to be considered at the design<br>phase to reduce noise levels to achieve compliance with<br>the Project Specific Noise Levels (PSNLs). Any further<br>measures, such as limiting plant noise levels and use of<br>local shielding (eg container stacks, sheds, buildings) in<br>specific locations. These more specific design matters<br>are difficult to determine at this stage of the project.<br>However, in response to concerns regarding noise<br>exceedances, the most likely or typical operational<br>scenario has now also been modelled from all available<br>information known at this stage of the project, and the<br>results of this assessment are presented in the RT&A<br>Technical Memo in Appendix E.<br>It is noted that noise-enhancing wind conditions do not<br>necessarily occur for one third of the year from any<br>single direction. Instead they are expected to occur for a<br>range of different directions depending on the time of<br>year and time of day – see the RT&A Technical Memo in<br>Appendix E, which presents the outcomes of a more<br>detailed analysis on wind data. This shows that different<br>noise receivers are impacted for different seasons of the<br>year and a different periods of the day.<br>Given the above, a "worst case" noise model was built<br>and a conservative assessment was undertaken and<br>presented in the NIA in accordance with all relevant<br>noise policies and guidelines. The RT&A Technical<br>Memo presents areas of conservatism which are built<br>into the assumptions used in the NIA noise modelling for<br>assessing impacts at night, and what effect each of<br>these would have if one were to model a more realistic,<br>likely or typical night operational scenarios<br>have now also been modelled from all available<br>information known at this stage of the project, for the<br>Day, Evening and Night periods respectively. For each |                   |      |
|                | several hundred residences, that will experience noise in                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | calm conditions and for the worst-case wind conditions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                   |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Stakeholder<br>ID | Name |

| Issue Category | <b>Comments</b><br>excess of the criteria during the construction period. The<br>attached map (overleaf) shows the area that may be<br>affected by noise impacts. We are not necessarily saying<br>that all these residences will definitely be affected, as the<br>extent of affectation will depend upon a number of factors.<br>The map is included simply to indicate that many<br>residences are located within reasonable proximity to the<br>site and may be affected if noise levels exceed the criteria<br>and if effective mitigation measures are not developed to<br>manage noise impacts appropriately. Whilst there is a<br>suggestion for mitigation measures, the EAR (sec 11.10)<br>only says "they will be considered". Council considers this<br>to be an unacceptable response to the management of an<br>impact that could significantly affect large numbers of<br>people. Whilst Council accepts that construction noise will<br>not be long term, in view of the exceedances of the criteria<br>that will occur, and the number of residences that may be<br>affected, there is a need for much more thought to be put<br>into mitigation measures.<br>Concerns about the Impacts of Operational Noise and the<br>Lack of effective noise mitigation measures. Council is also<br>very concerned about the operational noise impact, given<br>that the EAR acknowledges that there will significant<br>exceedances of the accepted criteria for noise levels for all<br>types of noise disturbance whether intrusive noise, amenity<br>noise, sleep disturbance and in the operation of the facility<br>during the summer months. It appears that the noise<br>impacts will occur even after physical noise barriers are<br>constructed and mufflers fitted to the plant that will be<br>operating on site. Again the suggestion of a noise<br>management plan incorporating certain reduction<br>measures is made. However this does not appear well<br>thought out and with no commitment to making it work.<br>Additionally, some of the sources of noise impact do not<br>seem to be amenable to mitigation by the suggested<br>measures.<br>As an example, the EAR states that noise exceedance.<br>caused by adverse wi | Response           Separate noise models for the 'intrusiveness' and the 'amenity' assessment periods, were run to allow for the direct assessment of impacts for each scenario during each of the three assessment periods. The results of these assessments are presented in the RT&A Technical Memo in Appendix E.           In summary compliance is achieved with both the 'Intrusiveness' and the 'Amenity' PSNLs under calm and worst-case noise-enhancing wind scenarios, at all receivers with the exception of a few minor exceedances during adverse wind conditions of 1-2dB(A) and one 5dB(A) exceedance under adverse wind from one specific direction. These results do not include additional noise mitigation measures, such as those discussed in the RT&A Technical Memo, therefore, there is scope to further reduce noise emission levels from the operation of the site as part of the DD / EMP phase in order to comply with the PSNLs. Any further measures considered at the detailed design stage would include source specific measures, such as limiting plant noise levels and use of local shielding (eg container stacks, sheds, buildings) at specific locations etc as described in the RT&A Technical Memo in Appendix E. After all reasonable and feasible measures are considered at the detailed design stage all physical and management noise control measures will be incorporated into the EMP for the site.           It is noted that the number of houses affected shown in Table 4.12 of the NIA is high as the noise model was conservative in not taking into account local shielding provided by residential and other non-industrial buildings off site. Such building data was unavailable for inclusion in the noise model at this stage. It is intended that building data be included in the detailed noise model to be run at the Detailed Design / EMP phase, which is expected to show a significant reduction in the number of houses affected. Therefore, an an | Stakeholder<br>ID | Name |
|                | may blow much more frequently than acknowledged in the EAR). |                | and are apparently unmitigable. At times the exceedances that will occur are not trivial (1 OdBA) at times, and as a result of the noise impacts we consider that at this stage without further work being done to reduce the impacts of operational noise, the proposal is not suitable for approval. Numbers of People Affected. To further highlight our concerns, Council is very concerned about the numbers of people that will be affected by the unacceptable noise levels. Whilst the EAR admits that exceedances will occur, it does not accurately relate this to the number of people who will suffer. The EAR does note that some 70 residences could be affected by noise. However, we believe that in certain situations - over the summer when the south easterly winds blow, and if the noise mitigation measures fail, then there could be several hundred residences affected (basically all residences north of Ivy Street and some south, extending some distance westward depending upon the severity of the noise plume). We believe that it is not appropriate to approve the proposal given the fact that noise level criteria will be significantly exceeded and there is no reliable prospect of mitigating these exceedances, and as a result a large number of people will be affected. The Need for a Noise Management Plan. Section 11.8 of the EAR proposes that a Noise Management Plan be prepared prior to the commencement of works. Council supports this recommendation. However, it is considered essential that this plan be prepared and submitted for approval as part of the assessment process, and that it include adequate detail to ensure that noise impacts will be reduced to acceptable levels. Unless this, occurs, then there cannot be the confidence that the proposal will operate at an acceptable levels of exceedances of relevant noise criteria in some instances, the potential numbers of people that could be affected, and the concerns Council has raised about the likely efficacy of some of the mitigation measures it is important that approval only be | model.<br>Exceedance of the noise criteria was predicted after the<br>application of mitigation measures, but only during<br>adverse wind conditions and mostly in terms of the<br>'amenity' criteria. The modelling conservatively<br>assumes that the site is operating at capacity and all<br>plant is operating at full load over the entire night-time 9<br>hour assessment period. As this is unlikely to occur,<br>then the typical operational scenarios have now been<br>modelled. The results of these assessments are<br>presented in the RT&A Technical Memo in Appendix E.<br>In summary compliance is achieved with both the<br>'Intrusiveness' and the 'Amenity' PSNLs under calm and<br>worst-case noise-enhancing wind scenarios, at all<br>receivers with the exception of a few minor<br>exceedances during adverse wind conditions of<br>1-2dB(A) and one 5dB(A) exceedance under adverse<br>wind from one specific direction. These results do not<br>include additional noise mitigation measures, such as<br>those discussed in the RT&A Technical Memo,<br>therefore, there is scope to further reduce noise<br>emission levels from the operation of the site as part of<br>the DD / EMP phase, when more specific details about<br>the site and its operations are known, in order to comply<br>with the PSNLs.<br>After all additional reasonable and feasible measures<br>are incorporated into the design at the DD/EMP phase<br>(as set out in the RT&A Technical Memo in Appendix E),<br>it is expected that the PSNLs will be achieved.<br>The DEC's sleep arousal criterion is currently being<br>reviewed, as the general opinion is that this criterion is<br>conservatively low. For the NIA, guidance was taken<br>from the EPA's ENCM, which provides a conservative<br>criterion, and the ECRTN, which sets a suitable criterion<br>which will ensure that 90% of the population (including<br>the aged) are protected in their sleep, based on recent<br>research. However, it is understood that the current<br>DEC thinking is that an initial screening test should be<br>carried out to determine whether instantaneous noise<br>sources at night comply with th |                   |      |
|                | essential that this plan be prepared and submitted for<br>approval as part of the assessment process, and that it<br>include adequate detail to ensure that noise impacts will be<br>reduced to acceptable levels. Unless this, occurs, then<br>there cannot be the confidence that the proposal will<br>operate at an acceptable level of noise impact, and the<br>EAR appears to be deferring the resolution of an<br>important environmental issue to after the approval has<br>been obtained. Given the levels of exceedances of relevant<br>noise criteria in some instances, the potential numbers of<br>people that could be affected, and the concerns Council<br>has raised about the likely efficacy of some of the mitigation<br>measures it is important that approval only be given to the<br>proposal when it can be shown to operate without causing<br>undue noise impact. This can only occur if the noise<br>management plan is developed in detail and considered as                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | After all additional reasonable and feasible measures<br>are incorporated into the design at the DD/EMP phase<br>(as set out in the RT&A Technical Memo in Appendix E),<br>it is expected that the PSNLs will be achieved.<br>The DEC's sleep arousal criterion is currently being<br>reviewed, as the general opinion is that this criterion is<br>conservatively low. For the NIA, guidance was taken<br>from the EPA's ENCM, which provides a conservative<br>criterion, and the ECRTN, which sets a suitable criterion<br>which will ensure that 90% of the population (including<br>the aged) are protected in their sleep, based on recent<br>research. However, it is understood that the current<br>DEC thinking is that an initial screening test should be<br>carried out to determine whether instantaneous noise<br>sources at night comply with the criteria established in<br>the ECRTN. If noise levels are found to exceed, more                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                   |      |

|                | <ul> <li>part of the assessment process, and that it is considered before any approval is given to the proposal.</li> <li>Summary of Councils concerns about Noise In summary, Council considers that the management of noise is a critical issue in both the operational and construction stages of this proposal. Presently, Council considers that the EAR has not shown that the proposal can operate or be constructed without generating severe noise impacts. As explained in our submission, we take this view for the following reasons: <ul> <li>flaws in the assessment technique which we think may have underestimated the extent of noise impact;</li> <li>the predicted noise levels, which are at time significantly in excess of the relevant criteria; <ul> <li>the numbers of people potentially affected by noise (perhaps several hundred); and</li> <li>the noise mitigation measures that are proposed do not appear as though they will be effective in reducing noise to acceptable levels;</li> <li>the need for a noise management plan to be prepared and submitted for assessment before any approval for the proposal</li> </ul> NOISE CONCLUSIONS</li></ul></li></ul> | detailed analysis is required to determine the extent of<br>potential disturbance to sleep, based on the number of<br>events, timing of events etc.<br>Notwithstanding this, a more detailed analysis of sleep<br>disturbance issues is carried out and included in the<br>RT&A Technical Memo (Appendix E), based on several<br>assumptions.                                   |                   |                                              |
|                | Noise Impacts; Council has concerns about noise impacts<br>during both the construction and operational phases. We<br>are concerned about the predicted noise levels included in<br>the EAR, many of which exceed relevant criteria, and the<br>fact that even these noise levels may have been<br>underestimated. We are also concerned that the numbers<br>of residences potentially affected by noise may have been<br>underestimated, and that the proposed mitigation<br>measures will not be effective.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                 |                   |                                              |
| Noise          | <ul> <li>It is not considered that matters relating to rail nose and vibration (on the freight train line between Port Botany and Enfield) have been properly addressed.</li> <li>Frequency of freight trains as anticipated in the environmental assessment</li> <li>Rail noise and vibration from the freight line in the Marrickville Local Government Area</li> <li>Quite simply, it considered unacceptable that neither the Environmental Assessment for the proposed Enfield</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The appropriate approach to the management of effects<br>from the rail freight line corridor is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor. | 489               | Marrickville Council<br>DoP Submission No 58 |

|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|-------------------|------|
|                | Expansion EIS, has undertaken a full and accurate<br>assessment of the noise and vibration impact of freight rail<br>trains (moving between both facilities) upon dwellings<br>located in the Marrickville LGA. Rather than conducting any<br>original assessment of the impact of freight rail noise and<br>vibration upon dwellings in the Marrickville local<br>government area (LGA), the Environmental Assessment<br>simply makes reference to the assessment contained in the<br>Port Botany Expansion EIS of early 2004. The above<br>paragraphs identify Marrickville Council's serious concerns<br>regarding the methodology which Sydney Ports<br>Corporation has used (with regards to both the expansion<br>of Port Botany and the proposed Intermodal terminal at<br>Enfield) in regards to the impact of rail noise and vibration.<br>Due to these serious and ongoing concerns, Marrickville<br>Council requests that the current Intermodal Logistics<br>Centre proposal not be approved - until such time as<br>Sydney Ports Corporation has conducted a full and<br>accurate assessment of the noise and vibration impact that<br>freight trains (including the additional trains as a result of an<br>expanded Port Botany and an intermodal terminal at the<br>Enfield marshalling yards site) travelling between Port<br>Botany and Enfield would have upon dwellings in the<br>Marrickville local government area - with the assessment<br>making commitments in regards to consultation with<br>affected residents, and the installation of noise mitigation<br>works which would result in compliance with Environmental<br>Protection Authority rail noise criteria. |          |                   |      |
|                | Marrickville Council is eager to ensure that the impact of<br>noise and vibration generated by trains moving between an<br>expanded Port Botany and an Enfield Intermodal Logistics<br>Centre - is properly addressed. It is clear that the<br>expansion of Port Botany and a proposed Enfield<br>Intermodal Logistics Centre are intrinsically linked. For<br>these reasons, Marrickville Council would reject any<br>suggestion that matters relating to rail noise and vibration<br>have already been fully addressed in the approval of the<br>Port Botany expansion - and that these matters cannot be<br>further addressed in a consent which applies to<br>the proposed Enfield Intermodal Logistics Centre.<br>Marrickville Council's serious concerns regarding the<br>methodology used by the Port Botany Expansion                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |                   |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                              | Response | Stakeholder<br>ID | Name |

# Submissions Council: Planning

| Planning | We note that the EAR states that there are no prohibitions<br>in the Special Uses Railway Zone (where the proposed site<br>is located. However, Council is concerned that there is a<br>deficiency in this component of the EAR in that it<br>has not addressed the "offensive" aspects of SEPP 33,<br>even though thisSEPP applies to the proposal, and has a<br>bearing on whether or not the proposal is permissible. The<br>failure to consider this matter and establish the<br>permissibility of the proposal under SEPP 33 is an<br>oversight.<br>We understand however that the proposal is subject to the<br>Strathfield Planning Scheme Ordinance, in which the<br>proposed site is zoned Special Uses Railway.<br>However, it is noted that one State Environmental Planning<br>Policy (SEPP 33 - Hazardous and Offensive Development)<br>which may bear upon the permissibility of the development<br>has not been properly considered.<br>Although SEPP 33 has been addressed in relation to the<br>proposal in terms of hazard, the EAR has omitted any<br>consideration of whether the proposal is "potentially<br>offensive" under SEPP 33. In this regard, the EAR should<br>have considered the different types of polluting discharge<br>emanating from the facility (such as noise, air emissions<br>etc) and formed an opinion as to whether they would be<br>acceptable (in which case the proposal would be<br>considered "potentially offensive industry") or non<br>acceptable (in which case it would be "offensive industry")<br>Given that the EAR acknowledges that there are<br>exceedences or possible exceedences of relevant criteria<br>for noise and air quality, then there could be an argument<br>that the proposal should be classified as an "offensive<br>industry". This is more than a simple technicality<br>because if the proposal is found to be "offensive industry"<br>as opposed to "potentially offensive industry" then the<br>permissibility of the use could be questioned, as such a use<br>could only proceed if it this use was allowed under the<br>zoning. | Noise levels will be managed to a level such that they do<br>not represent an "offensive" activity.                                                                                                                                                                                                                                                                             | 815 | Bankstown Council<br>DoP Submission Nos<br>164 & 328 |

| pollution      | Visual pollution<br>The Visual Impact of the proposal has not been adequately<br>addressed and mitigated. The visual impact of tall stacks of<br>shipping container, site infrastructure, warehouses and the<br>road bridge will be visible from many adjacent and nearby<br>publicly accessible roadways, overpasses and residential<br>areas. Additional site perimeter landscape screen/buffer<br>planting is required to mitigate this detrimental visual<br>impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Visual impacts are considered in Chapter 13 of the EA.<br>This included review of the visual implications of the<br>buildings and operations. The landscape plan identified<br>screening measures to minimise the potential for visual<br>impacts. Landscape planting would be developed<br>further during the detailed design phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 832               | Strathfield Council<br>DoP Submission Nos<br>121 & 159 |
|                | Pollution-light<br>Light trespass and sky glow produced by artificial lighting<br>are serious matters, which<br>have well known adverse effects upon the natural<br>environment and also upon human<br>health. Apart from sleep disturbance in humans, there is<br>also emerging evidence that<br>night time lighting may play a role in the increased<br>incidence of negative health effects.<br>Reference should be made to Australian standards such as<br>AS 4282-1997, Control of<br>the obtrusive effects of outdoor lighting. It would also be<br>reasonable to expect that the<br>Department will request computer modelling of any<br>proposed lighting installation.                                                                                                                                                                                                                                                                                                                                                | Light spill has been modelled from a series of points<br>correlating to the closest residences. Light fittings would<br>be visible at night from most of the key viewpoints<br>assessed during the EA preparation, however, they<br>would not be expected to change the night landscape as<br>the lights would be focussed downwards and would be<br>part of a landscape already containing a large number of<br>light sources.<br>Lighting on site would be designed to meet AS4282<br>Control of Obtrusive Effects. Consultation will be<br>undertaken with rail corridor owners regarding their<br>lighting requirements to ensure the proposed lighting on<br>the site does not significantly affect adjacent rail<br>operations. Screen planting will also be strategically<br>placed to prevent light spill.<br>Lighting would be addressed during the detailed design<br>phase and the potential for light spill considered when<br>siting lights and providing illumination specifications. |                   |                                                        |
| pollution      | Section CC indicates only one container stack of 5<br>containers in height located to the lower section of the<br>northern Empty Container Storage area. In reality many of<br>the stacks would be 6 containers high (16m high), even to<br>the higher side of the storage area. The container stacks<br>would therefore be more visible from the residential areas<br>west of Roberts Road than illustrated in View 18 'Jean<br>Street, Greenacre looking east'. The northern Empty<br>Container Storage Area also would be highly visible from<br>the Roberts Road overpass. The 5 metre high proposed<br>noise wall along Roberts Rd and the existing native tree<br>planting will not adequately visually screen the potential<br>visual impact of the 16 metre high stacks of containers as<br>seen from Roberts Road. View 7 and 9 also downplays the<br>visual impact of the southern Empty Container Storage<br>Area as viewed from the Wentworth Rd Greenacre<br>residential area and from the Punchbowl Rd overpass. | Chapter 16 and Appendix I provide information on the<br>likely views associated with the ILC from key viewpoints.<br>Landscape design to be prepared as part of the detailed<br>design phase would take into consideration the potential<br>changes to the visual environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 832               | Strathfield Council<br>DoP Submission Nos<br>121 & 159 |

| pollution | There is no mention of the risk of escape to local<br>waterways. In the past the Enfield site has been a source of<br>oil spills into the Cooks River and Coxs Creek and we need<br>to be confident that the new facility will present a very low<br>risk in terms of waterway pollution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Potential pollutants during construction and operation<br>would be managed in accordance with the construction<br>and operation management plans. An emergency<br>incident management will be prepared prior to the<br>opening of the Intermodal Logistics Centre.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 816 | Canterbury Council<br>DoP Submission Nos<br>157 & 162 |
| pollution | Light Spill; Council considers that additional work is<br>necessary to ensure that this matter has been adequately<br>addressed Council does not believe that the proposal will<br>cause unacceptable impacts on the existing visual<br>environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | See above comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 815 | Bankstown Council<br>DoP Submission Nos<br>164 & 328  |
|           | Light Spill<br>Furthermore, any approval for this proposal should include<br>a condition that the development comply with Australian<br>Standard AS 4282-1997 - Control of the Obtrusive Effects<br>of Outdoor Lighting, Council does however have some<br>concerns about this issue. The EAR is very brief in the way<br>it addresses this matter. The statement "the light spill on<br>the neighbouring areas would be virtually undetectable"<br>has not been backed by credible evidence. In a large<br>facility like this with 24 hour operational requirements, the<br>height of some of the components and the level of<br>illumination required will inevitable result in light spill, and<br>given the proximity of some residential dwellings, there is a<br>potential impact due to obtrusive lighting.                       | The light spill impacts are considered in Chapter 16. The<br>proposed lighting would not be expected to change the<br>night landscape as the lights would be focused<br>downwards and would be part of a landscape already<br>containing a large number of light sources. Lighting on<br>site would be designed to meet ASNZS4282 Control of<br>Obtrusive Effects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |     |                                                       |
|           | As a mitigation measure the EAR simply states "lateral light<br>spill and glare is minimised as the light fittings focus<br>illumination downwards". The EAR does not even mention<br>compliance with the relevant Australian Standards for<br>control of obtrusive outdoor lighting (even streetlights in<br>residential streets must meet to meet some standards for<br>intrusive light spills). The EAR should provide further<br>advice about how the proposal complies with relevant<br>Australian Standards for Obtrusive Lighting (such as AS<br>4282-1997 – Control of the Obtrusive Effects of Outdoor<br>Lighting), Council considers that comment on the potential<br>light impact should be sought from professional bodies<br>such as the Astronomical Society of Australia, and relevant<br>Space Observatories be sought. | The effects of light spill were investigated in the EA<br>(Chapter 16) and the Appendix I – Visual Assessment.<br>The impacts of light spill were investigated to determine,<br>in particular, the impacts at night. A preliminary lighting<br>concept was developed for the purposes of modelling<br>light spill.<br>Light spill was modelled from the empty container areas<br>at the northern and southern ends of the site as these<br>would be the closest parts of the ILC to residences.<br>Modelling results were compared against the relevant<br>standard AS4282 –Control of the Obtrusive Effects<br>recommended maximum obtrusive light levels.<br>Recommended illuminance limits are strictest during<br>"curfewed hours" (11pm and 6am). These are 4 lux at<br>the boundary of commercial and residential areas, 2 lux |     |                                                       |
|           | Furthermore, any approval for this proposal should include                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | within residential areas described as "light surrounds"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |     |                                                       |

| Rail Issues   | The report discusses volume of freight to be transported by<br>rail but it does not address the important areas of types of<br>locomotives and rolling stock, way and works infrastructure<br>requirements for operations and maintenance. This section<br>of the report is also not related to the other sections<br>regarding noise pollution and air quality.<br>While these are not fatal omissions on their own; when they<br>are combined with the range of other issues that cause<br>concern then Council believes the proposal should not<br>proceed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Typical locomotive types are outlined in the Noise and<br>Air of the EA Report working papers in Appendices E &<br>F. The use and availability of locomotives is a matter for<br>the freight and rail operators and will be considered<br>when the ILC commences operations.<br>The appropriate approach to the management of effects<br>from the rail freight line corridor is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor.                                                                                                                                                                                                                                                                                         | 832               | Strathfield Council<br>DoP Submission Nos<br>121 & 159 |
| Rail Issues   | The current proposal allows for up to 20 shuttle train<br>movements per day to and from Enfield. There is no<br>guarantee that this will not increase in the future. This is in<br>addition to the other rail movements predicted on this line.<br>A total of 166 rail movements are predicted through this site<br>by 2025.<br>No documentation as to the types of traction engines to be<br>used is given in the Rail Traffic segment of the<br>Assessment. Documentation elsewhere is that it is<br>proposed to use old style diesel electric locomotives, which<br>do not meet current noise or emission requirements. It is<br>possible to use modern electric powered locomotives,<br>which will reduce noise and assist with the pollution issues<br>in the Sydney Basin. Further, there is no discussion as to<br>the maintenance requirements of infrastructure or rolling<br>stock.<br>Train Operations - No detail has been provided for rail<br>network maintenance. The amount of downtime for the<br>terminal due to track and related infrastructure<br>maintenance has the potential to cause backlogs and<br>associated vehicle / container storage deficiencies within<br>the site. Strathfield Municipal Council request details of the<br>proposed maintenance schedule and how any downtime<br>for the rail link will be managed. | The ILC has been designed to allow up to 300,000 TEU<br>per year. This will be achieved by up to 20 train<br>movements. The throughput capacity of the ILC is not<br>greater and therefore train numbers to and from the ILC<br>would not increase.<br>Typical locomotive types are outlined in the Noise and<br>Air of the EA Report working papers in Appendices E &<br>F. The use and availability of locomotives is a matter for<br>the rail and freight operators.<br>The appropriate approach to the management of effects<br>from the rail freight line corridor is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor.<br>Rail maintenance issues will be determined with the<br>cooperation of Rail Corp and ARTC. | 832               | Strathfield Council<br>DoP Submission Nos<br>121 & 159 |
| Rail Issues   | In the EA it is stated that this growth would occur in any<br>event because an alternative ILC would need to be<br>developed to meet the Government's rail freight<br>transportation objectives. However this statement is<br>regarded as a "cop-out" because it ignores that the<br>proposal is an essential part of the Government's<br>freight strategy, and it will in itself contribute to the<br>increased train movements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Without the development of Enfield the Government's freight strategy objective of 40% of Port Botany containers moved on rail would still be achieved, but not within the same time frame.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 816               | Canterbury Council<br>DoP Submission Nos<br>157 & 162  |

|                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | ID          |                                                        |
| Reject Proposal | Council objects to the DA and accompanying EA for the<br>intermodal and requests to the Department of Planning (the<br>consent authority) that the DA be refused. Council's<br>position is that the development of the proposed ILC should<br>not proceed because of the impacts that the development<br>would have on the Strathfield local government area.<br>The Enfield Intermodal proposal is not supported because:<br>• the impacts of the 24 hour operation of such a facility will<br>conflict with the after hour (night time) amenity of the<br>neighbouring residential suburbs despite the current<br>proposals to mitigate the impacts. | Noted.<br>The potential for environmental and social impacts are<br>assessed through various chapters of the EA and the<br>conclusion that the project should proceed, subject to<br>the implementation of mitigation measures expressed<br>as statements of commitment<br>The surrounding land use is predominantly industrial<br>and access to the arterial road network is through this<br>area. A Community and Ecological Area is proposed for<br>the area opposite residential development along<br>Cosgrove Road. The Local Area Traffic Management<br>Plan to be prepared for the site will provide means to<br>ensure that vehicles entering and leaving the site do not<br>enter Punchbowl Road from Cosgrove Road, thus<br>avoiding residential streets. A range of mitigation<br>measures have been proposed to minimise the potential<br>impacts from the 24 hour site operation. | 832         | Strathfield Council<br>DoP Submission Nos 121<br>& 159 |

| Safety         | No emergency incident management plan is evident to deal<br>with Dangerous Goods and vehicles carrying dangerous<br>goods.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Potential pollutants during construction and operation<br>would be managed in accordance with the construction<br>and operation management plans. As discussed in<br>Chapter 20 of the EA. An emergency incident<br>management will be completed by Sydney Ports<br>Corporation prior to the opening of the Intermodal<br>Logistics Centre.                                                                                                                                                                                                                                                                                                                                                              | 832               | Strathfield Council<br>DoP Submission Nos<br>121 & 159 |
|                | In the event of a major incident on the road network in the vicinity of the ILC a comprehensive Traffic Control Plan needs to be provided to demonstrate how the ILC propose to manage such an incident should it occur                                                                                                                                                                                                                                                                                                                                                                                    | See above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                   |                                                        |
|                | Over a five-year period, areas close to the proposed site<br>have had a total of 1213 accidents with 6% involving heavy<br>vehicles and 17% involving light commercial vehicles.<br>Additionally there were 10 fatalities. The most noticeable<br>accident locations are the Liverpool Rd (Hume Hwy) with<br>488 accidents and Roberts Rd with 282 both of which are<br>considered critical roads for entry /egress to the proposed<br>site. It would be fair to assume that with extra heavy<br>vehicles in the locality this poses a risk for the accident<br>levels to increase which is not acceptable | The ILC will contribute a 1% overall increase to the traffic volumes on the road. There is no reason to expect a significance increase in accident rate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                   |                                                        |
|                | <ul> <li>Design to be based on Safer by Design principles.</li> <li>Clear pedestrian entry to site. Preferably on northern side of Tarpaulin shed rather than near Punchbowl Rd to provide link to Major Open space corridor through Begnell Field.</li> <li>Pedestrian Crossing on Cosgrove Rd with Traffic Calming features to allow safe access from residential area.</li> </ul>                                                                                                                                                                                                                       | To be addressed as part of the detailed design phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                   |                                                        |
|                | Council does not support the proposal and would<br>recommend that a full Road Safety Audit on both a<br>Regional and Local level be undertaken in consultation with<br>all local Councils in the catchment area as proposed by<br>Sydney Ports                                                                                                                                                                                                                                                                                                                                                             | Strathfield Council was provided with 2005 intersection<br>count data at all critical locations within the impact zone<br>of Enfield ILC.<br>A road safety audit is not considered necessary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                   |                                                        |
| Safety         | There is considered to be inadequacies with the risk<br>assessment in the EA. The hazard identification summary<br>does not list the hazard from diesel spills from locomotives.<br>It also limits the consequence of a spill from the diesel<br>storage tanks to a potential fire.                                                                                                                                                                                                                                                                                                                        | Due to te low shunting speeds of locomotives on the ILC<br>site, diesel spills directly from incidents involving<br>locomotives were not included in the hazard<br>identification summary, as this is considered a hazard of<br>very low risk potential.<br>Any spills during refuelling of locomotives will be<br>captured in spillage pits.<br>Spills from the diesel storage tansk will be captured<br>within the bund area around the tanks. Potentially such<br>spills into the bunded area could result in a pool fire and<br>the risk and impact of such a fire was analysed and<br>given in the PHA in Appendix K of the EA. The impact<br>zone for the damage from such fires was calculated to | 816               | Canterbury Council<br>DoP Submission Nos<br>157 & 162  |

|        | has a capacity of 25,000 litres. There needs to be              | site. Storage tanks are treated separately and detailed     |     |                      |
|        | certainty that in the event of a catastrophic failure of one or | design would ensure that bunding facilities around each     |     |                      |
|        | more of the diesel tanks the site has the capacity to prevent   | storage tank would be capable of storing 110% of the        |     |                      |
|        | a spill leaving the site, particularly if this coincided with   | volume of the tank. This would also be addressed during     |     |                      |
|        | wet weather.                                                    | preparation of construction and operation management        |     |                      |
|        |                                                                 | plans. This would include the requirement for spill kits to |     |                      |
|        |                                                                 | be maintained on site.                                      |     |                      |
| Safety | Hazard Assessment. Given the complex nature of the              | This is an issue for Department of Planning.                | 815 | Beveridge, Mr Martin |
|        | hazard assessment and because it has an important               |                                                             |     | (Bankstown Council)  |
|        | bearing on public safety, it is considered prudent that         |                                                             |     | DoP Submission Nos   |
|        | the findings of the hazard assessment be peer reviewed by       |                                                             |     | 164 & 328            |
|        | an independent expert prior to any approval being given to      |                                                             |     |                      |
|        | the proposal.                                                   |                                                             |     |                      |
|        | Given the complex nature of the nazard assessment and           |                                                             |     |                      |
|        | because it has an important bearing on public safety,           |                                                             |     |                      |
|        | Council considers that the indings of the hazard                |                                                             |     |                      |
|        | assessment need to be peel reviewed by an independent           |                                                             |     |                      |
|        |                                                                 |                                                             |     |                      |
|        | Council is not necessarily disputing the findings of this       |                                                             |     |                      |
|        | assessment – we cannot due to its highly technical nature       |                                                             |     |                      |
|        | However, given that this issue relates to public safety we      |                                                             |     |                      |
|        | believe that it needs a detailed technical review by            |                                                             |     |                      |
|        | experts in this field, and we request that it be peer           |                                                             |     |                      |
|        | reviewed, we consider this to be necessary for a number of      |                                                             |     |                      |
|        | reasons:                                                        |                                                             |     |                      |
|        | • To confirm the assumptions made about the modelling           |                                                             |     |                      |
|        | (included                                                       |                                                             |     |                      |
|        | in Chapter 6 of Appendix K). This is a critical issue because   |                                                             |     |                      |
|        | assumptions were made about the materials that are used         |                                                             |     |                      |
|        | in the facility, and the quantities of these materials have a   |                                                             |     |                      |
|        | bearing on the hazard identification, the consequences          |                                                             |     |                      |
|        | associated with a hazardous incident, and consequently on       |                                                             |     |                      |
|        | the calculation of the risk contours. It seems to us that       |                                                             |     |                      |
|        | assumptions that particular materials will not be               |                                                             |     |                      |
|        | transported through the site could be unreliable since          |                                                             |     |                      |
|        | transported then it is hard to see how assumptions that         |                                                             |     |                      |
|        | certain materials wont be put through the site are valid        |                                                             |     |                      |
|        | Other assumptions should also be checked carefully for          |                                                             |     |                      |
|        | example the impact of greater than assumed wind speeds          |                                                             |     |                      |
|        | on the results.                                                 |                                                             |     |                      |
|        | Need for a Sensitivity Analysis. Further in this regard.        |                                                             |     |                      |
|        | any review should include a sensitivity analysis, as this will  |                                                             |     |                      |
|        | allow the uncertainty regarding assumptions about               |                                                             |     |                      |
|        | particular materials and their quantities to be included in     |                                                             |     |                      |
|        | the calculation of risk contours;                               |                                                             |     |                      |

| Review of Findings of PHA Given that this issue is directly            |  |  |
|------------------------------------------------------------------------|--|--|
| relevant to public cafety, we believe that all the entire              |  |  |
| relevant to public safety, we believe that all the entire              |  |  |
| calculations benind the PHA should be verified of peer                 |  |  |
| reviewed by another expert in this field.                              |  |  |
| Also, one specific point of clarification is requested. It is          |  |  |
| unclear whether the risk contours are calculated from                  |  |  |
| individual events (eg individual instances of fire, explosion          |  |  |
| or release of toxic substances) or whether they are based              |  |  |
| on combined events. A precautionary approach would                     |  |  |
| suggest that a combination of hazardous events (fire                   |  |  |
| explosion and release of toxic substances) be considered               |  |  |
| as a single incident and risk contours calculated on this              |  |  |
| combined incident. This would provide a "worst case                    |  |  |
| scenario, and only then (if the 1 - in a million individual            |  |  |
| fatality risk contour was contained on site could the                  |  |  |
| proposal be considered safe in terms of risk.                          |  |  |
| If the PHA has not included this "worst case" we believe it            |  |  |
| should be amended to include it.                                       |  |  |
| <ul> <li>Review of Mitigation Measures and Need for further</li> </ul> |  |  |
| Studies                                                                |  |  |
| Hazard mitigation measures have been proposed. These                   |  |  |
| should be peer reviewed for their suitability. Furthermore.            |  |  |
| the need for further hazard related studies should be                  |  |  |
| considered In this regard it is also noted that the FAR only           |  |  |
| includes a preliminary hazard analysis. This is                        |  |  |
| the first stage in the process of managing hazard that is              |  |  |
| advocated by the Dept of Planning. Other stages are also               |  |  |
| recommended, including such studies as a detailed hazard               |  |  |
| analysis a Hazard and Operability Study (HAZOP) study                  |  |  |
| and an Emergency management plan                                       |  |  |
| Whilst the FAR recommends the prenaration of an                        |  |  |
| Emergency management Plan, consideration should also                   |  |  |
| be given to whether a more detailed bazard analysis or a               |  |  |
| HAZOP study should be undertaken: until an appropriate                 |  |  |
| neer review of the bazard assessment has been                          |  |  |
| undertaken which addresses our concerns. Council is not                |  |  |
| convinced that the bazard issues have been adequately                  |  |  |
| doalt with                                                             |  |  |
|                                                                        |  |  |

| Socio Economic | The "Socio Economic Assessment" section of the Sinclair<br>Knight Merz report for Sydney Ports Corporation goes to<br>great lengths to consider identified social impacts and<br>effects in order to endeavour to mitigate negative impacts<br>on the immediate community, however, in most cases the<br>scenarios are during the construction phase only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | In the majority of development potential impacts are<br>most significant during the construction phase. Potential<br>impacts during operation would be managed through<br>the Operation Environment Management Plan. Details<br>of the mitigation measures for noise and air quality are<br>addressed in Chapters 11 and 12. Traffic in Chapter 7. | 832               | Strathfield Council<br>DoP Submission Nos 121<br>& 159 |
|                | The findings need to be projected to the every day<br>operation of the site on a day to day basis for the decades<br>to come, not just the construction phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | See above comment                                                                                                                                                                                                                                                                                                                                  |                   |                                                        |
|                | The social impacts relate to the health and safety not only<br>of the human communities adjacent to the site, but to<br>communities in the nearby areas such as the sections of<br>Strathfield north Liverpool Road. The report focuses on the<br>nearby community in most cases and should be<br>extrapolated to extend to the greater surrounding areas.<br>The specific impact on schools within the local community<br>has not been adequately addressed. This relates to local<br>schools such as Strathfield South Primary School, Chullora<br>Primary School, and particularly to Strathfield South High<br>School which is located at the corner of Liverpool Road and<br>Roberts Road to the northern end of the Enfield site. The<br>impacts from truck movements, traffic congestion, air and<br>noise pollution etc will potentially have a negative impact<br>on the children and staff attending these schools. | There are no specific impacts on schools in the area.<br>The assessment of impacts from truck movements,<br>traffic congestion, air and noise pollution indicate that<br>there would be no significant impacts in these areas<br>from the operation of the proposed ILC.                                                                           |                   |                                                        |
|                | If approval is granted for the Enfield Intermodal Proposal,<br>the following conditions should apply:<br>• To overcome the community concerns surrounding the<br>proposed Enfield Intermodal Logistic Centre further<br>investigation is required to consider the full social<br>implications of the day to day operations of the proposed<br>development                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | No further social impact assessment is required. The<br>Operational EMPs prepared for the site will address<br>issues of traffic, noise and air pollution leaving the site<br>and the ways in which these issues can be further<br>mitigated.                                                                                                      |                   |                                                        |
|                | The proposed Light Industrial/Commercial Development<br>along Cosgrove Road is not to be subject to the Local<br>Government Act Section 600 Rate Rebate of 25%. These<br>proposed developments would not be entitled to a rent<br>rebate from Council due to Clause (3) (a) as this land has a<br>frontage and access to Cosgrove Road and access is not<br>substantially over lands for which the public body (Sydney<br>Ports) provides.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Noted                                                                                                                                                                                                                                                                                                                                              |                   |                                                        |
|                | Strathfield Council does not currently levy Section 94<br>contributions from Industrial developments. However the<br>proposed development will be subject to section 94<br>contributions should Council decide to levy Section 94<br>contributions from Industrial developments as part the<br>2006 five year review of Strathfield Council's Section 94<br>Plan. However considering the size and impact of this                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Noted                                                                                                                                                                                                                                                                                                                                              |                   |                                                        |

#### Submissions Council: SOCIO ECONOMIC

|                | proposed development, specific contributions on annual<br>basis (in addition to Section 94 & the Community<br>/Ecological Area) should be made for local community<br>benefit. Council will be able direct these contributions or<br>outline specific projects that can be delivered by Sydney<br>Ports in line with Councils identified planned community<br>and recreational facilities in the south Strathfield area (eg<br>from the Strathfield Recreational & Cultural Needs Study<br>2006).<br>It is recommended that on-street parking on the southern<br>side of the eastern arm of Norfolk Road be prohibited for a<br>distance of 50m. This restriction would have an impact on<br>the businesses fronting this section of Norfolk Road and<br>alternative arrangements for their staff and customers<br>would need to be made. | Banning parking for this length could improve<br>intersection operation. Alternative parking<br>arrangements could be incorporated into the detailed<br>design for the intersection and would be subject to<br>further considered during preparation of the Local Area<br>Traffic Management Plan and the redesign of the |     |                                                           |

| Support Proposal | Bankstown City Council supports, in principle, the freight<br>strategies outlined within the paper entitled "Railing Port<br>Botany's Containers" prepared by the Freight Infrastructure<br>Advisory Board (FIAB). This includes the proposition for a<br>network of intermodal terminals within western and south<br>western Sydney to increase the amount of freight moved by<br>rail. In this context, Council recognises and is supportive of<br>the important role that the proposed terminal at Enfield<br>would fulfil as part of this network. | Noted.                                                                                                                                                                                 | 815           | Bankstown Council<br>DoP Submission Nos<br>164 & 328 |
|                  | Nevertheless, Council is concerned that the EAR for the<br>proposed freight terminal has not demonstrated that, in<br>view of the scale of the facility and its 24 hour operational<br>requirements that it can operate in an acceptable manner,<br>and without significant impacts upon the residents of<br>Bankstown, particularly in the suburb of Greenacre.                                                                                                                                                                                       | Construction and Operation Environmental<br>Management Plans are proposed to minimise identified<br>impacts. Mitigation measures are to be further explored<br>during detailed design. |               |                                                      |
|                  | Whilst Bankstown Council supports the objectives behind<br>the establishment of the facility, we consider<br>that-modifications are required on these matters (traffic,<br>noise, air quality light spill) before we are satisfied that the<br>facility will operate in an environmentally acceptable<br>manner.                                                                                                                                                                                                                                       | Noted.                                                                                                                                                                                 |               |                                                      |
|                  | We also consider that there is a requirement for detailed<br>conditions of consent to be included (including provision for<br>monitoring of these conditions, perhaps by a Consultative<br>Committee consisting of representatives from affected<br>Councils, Sydney Ports and the Department of Planning)<br>before Bankstown Council can be confident that the<br>proposal can operate satisfactorily.                                                                                                                                               | The Project Environmental Management Plan would<br>provide a means of ensuring compliance and monitoring<br>of compliance with the conditions of consent.                              |               |                                                      |

| Tarpaulin Factory | The Tarpaulin shed provides the possibility of becoming a valuable community facility subject to repair, restoration and conversion; this may include consideration of partial relocation and demolition to improve the practicality and benefit of the facility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Management options for the Tarpaulin shed are to be<br>further investigated as part of the detailed design phase.<br>Council, the community and the heritage Office will be<br>involved in the decision as to the future of the structure.                                                                                                                                                                                                                                                                     | 832               | Strathfield Council<br>DoP Submission Nos 121 &<br>159 |
| Tarpaulin Factory | <ul> <li>It is feasible to relocate one or both sections of the state significance former Tarpaulin Factory without substantial loss of significance particularly as it is a reassembled building.</li> <li>Restoration and repair to be completed by Enfield ILC. Conversion to community facility should also be undertaken at the cost of Enfield ILC. Investigation of the possibility of relocating the eastern section of Tarpaulin shed to another site, providing space for limited parking and landscaping to the road frontage.</li> <li>Removal of contaminants such as lead or asbestos, gas bottles and rubbish.</li> <li>Used for multiple community purposes such as community centre, youth centre or indoor sporting facility as per the recommendations of the Strathfield Recreation Plan currently under development.</li> <li>Tarpaulin Shed design should incorporate views and access to the Community + Ecological Area.</li> <li>Tarpaulin Shed will require Soundproofing to allow use for community purposes.</li> <li>Parking must be considered depending on future use. As noted in the GBA report, the building has been relocated previously and could be disassembled and rebuilt in a location where access can be better arranged. Ideally, this should be within the proposed Intermodal Logistic Centre development so that its relationship to the former Enfield Marshalling Yard is retained.</li> <li>The building has limited potential for re-use for commercial or community facilities. With limited use options, the building is likely to become a financial burden on the community.</li> <li>Considering the high significance of this building, strategies for the potential re-use of this building that better address access, community needs and desires and future maintenance issues need to be developed.</li> <li>Specific guidelines for the Tarpaulin Factory for the potential re-use of this building can be relocated without substantial loss of significance, subject to an</li> </ul> | Reuse options for the Tarpaulin Factory will be further<br>investigated as part of the detailed design phase of the<br>project. The Tarpaulin Factory will be stabilised against<br>further deterioration and, in consultation with the<br>Heritage Office and the community, options for its reuse<br>at its present site will be investigated. Only if on-site<br>reuse is found to be unachievable will consideration be<br>given to its relocation off-site to a railway heritage<br>museum or demolition. | 832               | Strathfield Council<br>DoP Submission Nos 121 &<br>159 |

|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-----------------------------------------------------|
| Traffic        | Sydney Ports proposal of relieving road congestion<br>by transferring freight by rail is seriously flawed as in<br>excess of 60% of all goods arriving by rail will still<br>require to be transported by road. This questions the<br>ability of the proposed ILC to operate effectively and<br>efficiently without utilising the road network that is<br>currently over capacity and operating at level of<br>service, which is unacceptable.           | The kilometres travelled by trucks associated with<br>the movement of the 300,000 TEU to/from the<br>Enfield ILC would be 68% less than if those same<br>trucks were moving the 300,000 TEU to/from Port<br>Botany. This is a substantial reduction in the<br>demand placed on the road network.                                                                                                                                                                                              | <u>832</u>  | Strathfield Council<br>DoP Submission Nos 121 & 159 |
|                | Extension of the proposed Cycleway from Begnell<br>Field through bridged across the site to Wentworth<br>Rd, Greenacre should be considered to increase<br>access to the population in Greenacre isolated by<br>the facility and railway lines.                                                                                                                                                                                                          | SPC is not proposing any off site bicycle paths                                                                                                                                                                                                                                                                                                                                                                                                                                               |             |                                                     |
| Traffic        | SKM's report also outlined observations that many of<br>the smaller freight companies with<br>limited facilities working on a tight budget (eg owner<br>drivers) were less likely to use freeways or<br>motorways due to the payment of tolls. These<br>vehicles would then find an alternative route via local<br>streets. This problem needs to be considered and<br>appropriate measures put in place in relation to the<br>proposed site at Enfield. | The modelling takes into account the value of travel time savings of drivers and how this translates into acceptable toll values for the time saved. There are alternative arterial routes available should truck drivers not wish to pay tolls on the M4 or M5.                                                                                                                                                                                                                              | 832         | Strathfield Council<br>DoP Submission Nos 121 & 159 |
|                | The scale of traffic impact on Enfield and<br>surrounding suburbs is unacceptable. No<br>consideration or reference has been made to the<br>proposed M4 East project and the local traffic impact<br>that may be generated                                                                                                                                                                                                                               | Enfield ILC contributes less than 1% of the overall traffic onto the local network. The scale of the traffic impact of the ILC therefore is not considered to be substantial. The M4 East was not considered as the proposal has not been endorsed by the NSW Government.                                                                                                                                                                                                                     |             |                                                     |
|                | Council strongly disagrees with the recommendation<br>that the Roberts Rd / Norfolk Rd intersection is<br>operating with spare capacity at level of service B<br>and requires no enhancement. We suggest that this<br>intersection is already over saturated with current<br>traffic volumes currently at level of service F and<br>requires complete re-construction and re- modelling<br>to include SCATS modifications.                               | Our traffic counts indicate that the average delay<br>for all vehicles at this intersection is 20 seconds in<br>both the AM and PM peak hours. While the<br>average delay on some movements may be high<br>at this intersection, the average delay on others<br>would be minimal, resulting in an acceptable<br>overall level of delay. Our analysis is presented in<br>the report which states that the Roberts<br>Rd/Norfolk Rd intersections operate at an<br>acceptable level of service. |             |                                                     |

This questions the<br>ability of the proposed ILC to operate effectively and<br>efficiently without utilising the road network that is<br>currently over capacity and operating at level of<br>service, which is unacceptable. | The kilometres travelled by trucks associated with<br>the movement of the 300,000 TEU to/from the<br>Enfield ILC would be 68% less than if those same<br>trucks were moving the 300,000 TEU to/from Port<br>Botany. This is a substantial reduction in the<br>demand placed on the road network.                                                                                                                                                                                              | 832               | Strathfield Council<br>DoP Submission Nos 121 & 159 |
|                | Extension of the proposed Cycleway from Begnell<br>Field through bridged across the site to Wentworth<br>Rd, Greenacre should be considered to increase<br>access to the population in Greenacre isolated by<br>the facility and railway lines.                                                                                                                                                                                                | SPC is not proposing any off site bicycle paths                                                                                                                                                                                                                                                                                                                                                                                                                                               |                   |                                                     |
| Traffic        | SKM's report also outlined observations that many of                                                                                                                                                                                                                                                                                                                                                                                           | The modelling takes into account the value of                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 832               | Strathfield Council                                 |
|                | the smaller freight companies with<br>limited facilities working on a tight budget (eg owner<br>drivers) were less likely to use freeways or<br>motorways due to the payment of tolls. These<br>vehicles would then find an alternative route via local<br>streets. This problem needs to be considered and<br>appropriate measures put in place in relation to the<br>proposed site at Enfield.                                               | travel time savings of drivers and how this<br>translates into acceptable toll values for the time<br>saved. There are alternative arterial routes<br>available should truck drivers not wish to pay tolls<br>on the M4 or M5.                                                                                                                                                                                                                                                                |                   | DoP Submission Nos 121 & 159                        |
|                | The scale of traffic impact on Enfield and<br>surrounding suburbs is unacceptable. No<br>consideration or reference has been made to the<br>proposed M4 East project and the local traffic impact<br>that may be generated                                                                                                                                                                                                                     | Enfield ILC contributes less than 1% of the overall traffic onto the local network. The scale of the traffic impact of the ILC therefore is not considered to be substantial. The M4 East was not considered as the proposal has not been endorsed by the NSW Government.                                                                                                                                                                                                                     |                   |                                                     |
|                | Council strongly disagrees with the recommendation<br>that the Roberts Rd / Norfolk Rd intersection is<br>operating with spare capacity at level of service B<br>and requires no enhancement. We suggest that this<br>intersection is already over saturated with current<br>traffic volumes currently at level of service F and<br>requires complete re-construction and re- modelling<br>to include SCATS modifications.                     | Our traffic counts indicate that the average delay<br>for all vehicles at this intersection is 20 seconds in<br>both the AM and PM peak hours. While the<br>average delay on some movements may be high<br>at this intersection, the average delay on others<br>would be minimal, resulting in an acceptable<br>overall level of delay. Our analysis is presented in<br>the report which states that the Roberts<br>Rd/Norfolk Rd intersections operate at an<br>acceptable level of service. |                   |                                                     |
|                | The application calls for significant numbers of                                                                                                                                                                                                                                                                                                                                                                                               | Norfolk Road / Wentworth Street is approved for                                                                                                                                                                                                                                                                                                                                                                                                                                               |                   |                                                     |
| B-double vehicles to use Wentworth St and<br>Norfolk Rd. With this in mind, Norfolk Rd is approved<br>only for use by 23m B-doubles and<br>Wentworth St is not approved for B-double use.                                                                                                                                                                                                                                          | use by 23m B-doubles between Roberts Road<br>and Metro Smallgoods. It would be appropriate to<br>extend the approval to the ILC entry.                                                                                                                                                                                                                                                                                                        |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| It is unlikely that Council would approve<br>Wentworth St for B-double use in the short term due<br>to issues related to alignment and<br>pavement capacity                                                                                                                                                                                                                                                                        | Council and the RTA have previously (June 2005)<br>undertaken tests with 25m B-doubles at Roberts<br>road/Norfolk Road. The testing indicated a<br>problem with the left turn into Norfolk Road. This<br>turn would be possible with intersection<br>improvements (i.e. a splayed intersection<br>approach-left turn in from Roberts Road) Council<br>indicated no problems with other movements at<br>this intersection with a 25m B-double. |  |
| Section 138 of the Roads Act provides for the Road<br>Authority to approve access to its roads.<br>There is no provision for an application to Council for<br>any access to Wentworth St. Council would not<br>normally approve this access, as there are already a<br>number of access points to this site. Council needs<br>to have the ability to approve the proposed bridge<br>alignment in terms of grade and site distance. | An application for access to Wentworth Street will<br>be submitted at the appropriate time. Council will<br>be consulted over the access and the bridge<br>design, although as this is a Major Project,<br>Council's approval may not be withheld.                                                                                                                                                                                            |  |
| The proposed development of Cosgrove Rd should<br>be accessed from internal roads and not directly<br>onto Cosgrove Rd                                                                                                                                                                                                                                                                                                             | Access to the sites proposed for Cosgrove Road will be subject to separate approvals.                                                                                                                                                                                                                                                                                                                                                         |  |
| Additionally, with a large increase of heavy vehicles,<br>no consideration has been given to the capacity of<br>local service stations in the locality to allow B double<br>trucks to refuel and re-enter the road network in a<br>safe manner                                                                                                                                                                                     | Vehicles will not have to refuel at local stations.                                                                                                                                                                                                                                                                                                                                                                                           |  |
| Access and egress to / from the site is being directed<br>to intersections already over capacity<br>with current traffic volumes which generally tends to<br>create "Rat-Runs" through residential<br>streets                                                                                                                                                                                                                      | Enfield ILC contributes only a marginal increase<br>to the volumes of traffic on the road network.<br>The ILC will develop LATM measures, in<br>consultation with the RTA and Councils to deter<br>ILC trucks from using residential streets.                                                                                                                                                                                                 |  |
| There is a severe lack of public transport facilities to cater for the future employees should the proposal go ahead.                                                                                                                                                                                                                                                                                                              | The shift workers are unlikely to use public<br>transport due to shift hours. There are some bus<br>routes which serve the site for other employees<br>but these are unlikely to be heavily used. Parking<br>will be provided on-site for all employees.                                                                                                                                                                                      |  |
| Rail Infrastructure Corporation claims the proposal                                                                                                                                                                                                                                                                                                                                                                                | Noted. This road transport growth is                                                                                                                                                                                                                                                                                                                                                                                                          |  |

| will provide certainty for rail industry to<br>plan for future business growth without any<br>consideration or acknowledgement that more<br>road transport will be required to achieve any growth                                                                                                                                                                                                                                                                                             | correspondingly diminished with the increased use of rail transport.                                                                                                                                                                                                                                                                                                                                                                         |  |  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| No downtime for track maintenance is highlighted<br>with proposed rail operations running 24 hours per<br>day 365 days per year. Council would request<br>confirmation that further road movements will not<br>occur during rail maintenance periods                                                                                                                                                                                                                                          | In the proposed typical operation scenario,<br>maintenance is assumed to take place between<br>3am-5am and therefore no truck movements<br>occur to access the ILC (see EA Report section<br>4.2.1 of Appendix B).                                                                                                                                                                                                                           |  |  |
| SKM reports that construction staff traffic impact is<br>not considered to be significant. At peak time up to<br>240 staff will be employed plus 75 construction<br>vehicles daily. The closest train<br>stations are 2.3 km away and the bus service does<br>not adequately service the site. Based<br>on this, it may be safe to assume that private<br>vehicles will be used and therefore parking<br>facilities will need to be considered despite SKM's<br>analysis                      | The movement of all 240 staff within the network<br>peak hour is a worst case scenario, and it would<br>be likely that there would be some spreading of<br>arrivals and departures.<br>SPC propose to cater for all parking on-site. The<br>requirement for parking has been discussed<br>within the EA in Section 3.6.1 of Appendix B. The<br>actual parking arrangements would be addressed<br>as part of the detailed design stage.       |  |  |
| In addition to the above paragraph parking remains a concern as it has been advised that up to 450 people will be employed on site when operational and unfortunately no concrete evidence of parking facilities are provided apart from saying that all vehicles will be accommodated on site. Council would like to see confirmation of an internal traffic management plan which will deal with all issues and a standard operating procedure for all lessees / operators within the site. | EA report Section 3.3.7 of Appendix B states that<br>a total of 378 persons working on-site during a<br>total workday, with 291 during the day and 87<br>during the night. Parking will be provided on-site<br>for all employees. A traffic management plan will<br>undertaken as part of the concept / detailed<br>design stage.                                                                                                            |  |  |
| Insufficient documentation have been made<br>available regarding the investigation of alternative<br>entry / exit points to the proposed site. Consideration<br>should be give to the possibility of linking Gould St to<br>the existing internal road within the site                                                                                                                                                                                                                        | Several access points have been considered and<br>thoroughly documented by Sydney Ports<br>Corporation. This was summarised in the EA.                                                                                                                                                                                                                                                                                                       |  |  |
| Heavy vehicle movements are only anticipated at<br>this stage. Council would like to see a<br>proper schedule of truck movements due to the fact<br>that the current proposal anticipates that<br>only 6% of vehicle movements will occur between<br>2200hrs and 0600hrs. As this anticipated number is<br>so low, we suggest a curfew be imposed from<br>2200hrs to 0600hrs to minimise noise levels for<br>residents in the municipality                                                    | A likely daily profile of on-site truck activity is<br>shown in Figure 7-4 of the EA document. This<br>shows that approximately 13% of the vehicle<br>movements occur between 10pm-6am. Note that<br>between 3am-5am there are no truck movements<br>anticipated. Freight movements require flexibility<br>in operating hours to receive/deliver containers to<br>customers requirements. Noise impacts are<br>discussed in EA report Ch 11. |  |  |

| C<br>w<br>e<br>v<br>b            | Consultation with the RTA for the provision of a veighbridge and over height detection equipment to monitor the additional 1160 heavy rehicles daily utilising the proposed facility. This may be necessary prior to heavy vehicles entering the oad network.                                                             | Noted.<br>The RTA has requested SPC to develop a HVMP<br>which requires ILC operators to adhere to<br>relevant road regulations.                                                                                                                                                                                                                                         |  |  |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| T<br>la<br>a<br>th<br>si<br>si   | The assessment area is too localised due to the<br>arge amount of heavy vehicles concentrated in an<br>area already over saturated. The "knock on effect" to<br>his will have an enormous impact on a regional<br>acale and subsequently overload local roads already<br>struggling to compete with major arterial roads. | The area used in the traffic impact assessment is<br>considered acceptable given the low volumes of<br>additional trucks onto the arterial road network.<br>Outside the study area, the impact becomes<br>negligible. The ILC contributes less than 1% to<br>overall traffic volumes on the adjacent arterial<br>road network.<br>Source: Fig 4-3 and 4-4 of Appendix B. |  |  |
| T<br>R<br>pi<br>ci               | The increase in the degree of saturation on Roberts<br>Rd / King Georges Rd corridor will change the travel<br>patterns of many motorists, adding to network wide<br>congestion.                                                                                                                                          | The level of congestion in the Roberts Road<br>corridor is taken into consideration in the network<br>modelling. The future modelling includes the<br>changes in route that might eventuate due to<br>congestion in this corridor.                                                                                                                                       |  |  |
| W<br>re<br>rc<br>fii<br>u        | Whilst it is agreed that road improvements will be<br>equired at intersections, clearer presentation of all<br>oad improvements is required with confirmation of<br>inancial costing and contributions towards<br>upgrading and all traffic facilities                                                                    | SPC will provide further information at the detailed design stage once conditions of consent are known.                                                                                                                                                                                                                                                                  |  |  |
| F<br>tr<br>a<br>R                | Full consultation should take place with Council and<br>he RTA with a view to re-classifying Wentworth St<br>and Norfolk Rd to a state Highways whereby the<br>RTA would assume full responsibility.                                                                                                                      | This is a matter to be discussed between Council and the RTA.                                                                                                                                                                                                                                                                                                            |  |  |
| W<br>cc<br>c<br>p<br>E<br>S<br>s | With increased truck movements programmed,<br>council would suggest that the proponent<br>conduct a full analysis of noise levels to include<br>projected levels. This should meet with the EPA's<br>Environmental Criteria for Road Traffic Noise<br>tandards.                                                           | A Noise Impact Assessment has been considered<br>as Chapter 11 of the EA and in Appendix E. This<br>issue has been addressed in response to DEC<br>submission.                                                                                                                                                                                                           |  |  |
| S<br>g<br>a<br>1<br>b            | SKM's report that the peak period on the network is<br>generally between 0700hrs - 0900hrs and the<br>fiternoon peak period is between 1600hrs and<br>800hrs. This is a general assumption Sydney wide<br>but does not apply to this geographic location.                                                                 | 24-hour profiles for Roberts Road, Hume<br>Highway and Georges River Road (from 7 day<br>tube counts) indicate that the peak hour is the<br>same as reported.<br>This is also a general Sydney wide assumption<br>and an RTA guideline.                                                                                                                                  |  |  |
| Т                                | raffic counts confirm that many of the critical                                                                                                                                                                                                                                                                           | The peak period was analysed in terms of traffic                                                                                                                                                                                                                                                                                                                         |  |  |

| intersections pertinent to this proposal carry<br>significant volumes of traffic outside the hours<br>quoted. An example of this is the intersection of<br>Roberts Rd and Norfolk Rd carried 4309 vehicles per<br>hour at 1400hrs and 4708 vehicles per hour at<br>1500hrs on Friday 18th November 2005<br>respectively. Considering these volumes and the<br>documented peak period for truck movements from<br>the ILC is 1430hrs with 103 movements, this in my<br>mind considerably flaws the efficient and effective<br>movement of heavy vehicles both to and from the<br>proposed site. | impact of the proposed development. The survey<br>data from the tube counts indicate that this is the<br>peak period which should be considered for<br>overall network performance i.e. analysed worst<br>case analysis which is consistent with RTA's<br>requirements. |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| The proponent's data with regard to traffic counts /volumes is questionable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | The intersection survey counts were undertaken<br>by an independent survey company in February<br>2005. These surveys were undertaken over 24<br>hours / 7 days per week.                                                                                               |  |
| A number of intersections have been omitted which<br>this council deems critical to optimal traffic flow in th<br>area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The intersections analysed were considered to be<br>the most critical to the impact assessment. A<br>meeting was held with the RTA where additional<br>intersections were requested and assessment<br>undertaken by SKM.                                                |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | The low levels of traffic generated by the ILC(less<br>than 1% of overall traffic on the adjacent arterial<br>road network) do not warrant wider investigation.<br>The increase in background traffic growth is the<br>main impact on local network performance.        |  |
| Whilst it provides a glossy picture to produce<br>statistics of traffic volumes running in an East - Wes<br>direction, it is a far more sensible approach to traffi<br>management to look at the "full picture" and<br>therefore provide ALL details for traffic counts at the                                                                                                                                                                                                                                                                                                                 | 2005 surveyed intersection counts were provided<br>to Strathfield Council.<br>The source of the Council count data is unknown.                                                                                                                                          |  |
| given intersections. I have taken the liberty of<br>outlining data collected in November 2005, which ir<br>Councils opinion puts serious doubt into the<br>accuracy of the volumes provided. It should also be<br>noted that November is predominantly a reasonabl<br>quiet month in relation to traffic movements with<br>March usually being the busiest month of the year.<br>See table overleaf for confirmation:                                                                                                                                                                          | According to RTA annual data for Roberts Road<br>and Hume Highway, November is one of the<br>busiest months of the year in terms of daily<br>volumes. February is more representative of<br>average conditions.                                                         |  |
| Council believes that the following intersections are<br>considered critical to traffic operations in the area<br>and have not been assessed by SKM in their<br>proposal.<br>- Hume Highway/Waterloo Road                                                                                                                                                                                                                                                                                                                                                                                      | Hume Highway/Waterloo Road was analysed in<br>the studies for the previous proposal in 2001. The<br>LoS at this intersection was A. It was not<br>considered that conditions have significantly The<br>intersections analysed were discussed with the                   |  |

| - Liverpool Road/Homebush Road<br>- Arthur Street/Richmond Road                                                                                                                                                                                                                                                                                                                                                                                | RTA<br>Liverpool Road / Homebush Road – this<br>intersection is to the east of the proposed site.<br>The traffic distribution shows that approximately 1<br>HGV will use this intersection from the site and<br>therefore not considered to be adversely<br>impacted by the ILC – i.e. the market / destination<br>is to the west of the site<br>Arthur Street / Richmond Road – No vehicles from<br>the ILC are anticipated to use this junction and                          |  |

| • A full pavement condition audit is undertaken, of<br>all roads affected by the proposal, to assess the<br>capacity of these roads to carry the proposed vehicle<br>loadings in terms of both numbers and weight                                                                                                                                                                                                                       | A pavement condition survey was undertaken and is included in the EA – See Appendix B.                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| • Section 138 of the Roads Act provides for the<br>Road Authority to approve access to its<br>roads. There is no provision for an application to<br>Council for any access to Wentworth St.<br>Council would not normally approve this access, as<br>there are already a number of access points to this<br>site. Council needs to have the ability to approve the<br>proposed bridge alignment in terms of grade and site<br>distance. | An application for access to Wentworth Street will<br>be submitted at the appropriate time. Council will<br>be consulted in the detailed design phase over<br>the access and the bridge design.<br>Based on operational requirements, existing<br>agreements with RailCorp and known on site and<br>off site constraints (including the New Marshalling<br>Yards), the final location of the bridge will most<br>likely not vary more than 20m either side of its<br>current identified landing point. |  |
| <ul> <li>The proposed development of Cosgrove Rd<br/>should be accessed from internal roads and not<br/>directly onto Cosgrove Rd</li> </ul>                                                                                                                                                                                                                                                                                            | Access to the sites proposed for Cosgrove Road will be subject to separate approvals                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| • Establish an Intermodal further to the west of Sydney, which is the targeted area and final destination for over 60% of the freight passing through the proposed Enfield site.                                                                                                                                                                                                                                                        | Separate studies by SPC confirmed the inner and<br>middle western areas of Sydney as the market<br>catchment for up to 56% of in-bound containers.<br>The need for the ILC to service this area was<br>confirmed in the FIAB report, a component of the<br>Metropolitan Intermodal Freight Strategy. This will<br>contribute to the NSW Government's goal of<br>moving 40% of Port Botany containers on rail.                                                                                          |  |
| A traffic management plan (TMP) shall be submitted<br>to and approved by Council for all demolition,<br>excavation and construction activities associated<br>with the development taking place and prior to the<br>issue of a Construction Certificate.                                                                                                                                                                                 | A Construction Traffic Management Plan would<br>be prepared prior to construction commencement<br>taking into consideration the required demolition,<br>excavation and construction activities.                                                                                                                                                                                                                                                                                                        |  |

| Vehicular access points to site shall comply with the requirements of Council and RTA prior to the issue of a Construction Certificate.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| All redundant vehicular crossings shall be removed<br>and replaced with kerb and gutter and<br>footpath at no cost to Council. Reconstruct the<br>footpath, road shoulder kerb and gutter to Council's<br>specifications for the full frontage of the development<br>site at the completion of all building works.                                                                                                                                                                                                                                                                       | To be addressed during detailed design and construction                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| Any reduction in truck movements claimed by the<br>report as a result of freight trains coming to Enfield<br>will be severely offset by a dramatic increase in<br>localised truck movements entering and leaving the<br>facility to distribute the freight once it has been<br>offloaded from the trains.                                                                                                                                                                                                                                                                                | The analysis shows that the reduction in overall vehicle kilometres travelled (VKT) of 6.5 million VKT results in a saving of 250,000 truck movements between Port Botany and Enfield and a saving of 100,000 truck movements from Port Botany to final origin / destination within the ILC market area. 100,000 truck movements are internalised because of the integration of warehouse facilities on site with the intermodla terminal and empty container storage. |  |  |
| The modelling of air quality impacts from road traffic<br>and the conclusion that no exceedances or<br>significant impact will result from road traffic are<br>therefore seriously questioned.                                                                                                                                                                                                                                                                                                                                                                                           | The traffic and air quality impacts are addressed<br>in Chapter 7 and 12 of the EA. The traffic data<br>provided for these assessments were adequate<br>and appropriate.                                                                                                                                                                                                                                                                                               |  |  |
| SKM's Final Transport Working Paper concludes<br>that "where the heavy vehicle volume increases, it is<br>generally only by a small margin. In most cases, the<br>change in peak hour traffic volume is negligible."<br>Whilst this is true, the NETANAL model significantly<br>underestimates the current level of congestion on<br>the regional road network and the fact that even a<br>small increase in the number of heavy vehicles will<br>have a major impact on the operation of the regional<br>roads in the area, and the operation of the local<br>roads connecting to them. | Independent counts were undertaken to calibrate<br>the base model. The model was verified and<br>calibrated – See Appendix C of the full Transport<br>Working Paper (Appendix B) in the EA. The<br>results of the calibration process show that the<br>model used is acceptable for this analysis – and<br>the model updated to reflect existing conditions.<br>The area of impact was discussed with the RTA                                                          |  |  |
| The assessment area used is too small to enable the evaluation of the network wide implications of this proposal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The assessment area is considered to be<br>adequate. The ILC volumes generated are low<br>and generate less than 1% of overall traffic on the<br>adjacent arterial road network.The area of impact<br>was discussed with the RTA.                                                                                                                                                                                                                                      |  |  |
| The disbenefits this proposal has on the area around<br>Enfield may not be outweighed by the benefits to the                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Separate studies by SPC confirmed the inner and middle western areas of Sydney as the market                                                                                                                                                                                                                                                                                                                                                                           |  |  |

| road network around Port Botany. It is, therefore,<br>necessary that this proposal be considered within<br>the framework of metropolitan wide freight transport<br>strategy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | catchment for up to 56% of in-bound containers.<br>The need for the ILC to service this area was<br>confirmed in the FIAB report, a component of the<br>Metropolitan Intermodal Freight Strategy. This will<br>contribute to the NSW Government's goal of<br>moving 40% of Port Botany containers on rail.                                                                                                                                     |  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| At present the primary objective appears to be the<br>perceived achievement of rail transport targets when<br>the reality is that the rail component of freight trips<br>will be only 18 kilometres in length and the majority<br>of the total transport trip continues to be being<br>carried out by the same congested roads that are<br>currently used. Surely the primary objective of any<br>rail freight transport strategy should be to relieve<br>congestion on the road network.                                                                                                                                                                                                                                                                                  | The kilometres travelled by trucks associated with<br>the movement of the 300,000 TEU to/from the<br>Enfield ILC would be 68% less than if those same<br>trucks were moving the 300,000 TEU to/from Port<br>Botany. This is a substantial reduction in the<br>demand placed on the road network.                                                                                                                                               |  |
| <u>M7 and M4 East Motorways</u> - SKM's Final Transport<br>Working Paper fails to consider the impact of the<br>recently opened M7 Motorway and the proposed M4<br>East.<br>Although the M7 Westlink Motorway is likely to have<br>a greater influence on cross regional freight<br>movements, some trip reassignment will inevitably<br>occur due to the improved travel times available via<br>this route. The M4 East proposal will have a much<br>greater influence on the region surrounding the<br>Enfield site. In particular, it will provide direct access<br>via the Cross City Tunnel, Anzac Bridge, and City<br>West Link to Port Botany with the potential for major<br>travel time reductions for freight movements to and<br>from the inner west of Sydney. | The M7 was included in the model. The proposed M4 East was not considered as the proposal has not been endorsed by the NSW Government.                                                                                                                                                                                                                                                                                                         |  |
| The current geometry of the intersection is only<br>suitable for B-Doubles to enter from the<br>south and exit to the north. With the exception of the<br>northbound right turn from Roberts<br>Road into Norfolk Road and the right turn movement<br>from the eastern side of Norfolk Road, all other<br>movements provide inadequate turning paths for<br>B-Doubles.                                                                                                                                                                                                                                                                                                                                                                                                     | Council and the RTA have previously (June 2005)<br>undertaken tests with 25m B-doubles at Roberts<br>Road / Norfolk Road. The testing indicated a<br>problem with the left turn into Norfolk Road. This<br>turn would be possible with intersection<br>improvements (i.e. splayed intersection<br>approach-left turn in form Roberts Road). Council<br>indicated no problems with other movements at<br>this intersection with a 25m B double. |  |
| The modelling conducting by SKM indicates that the dominant movement of HGVs to and from the proposed site will be to the north and northwest. The volume of traffic and level of congestion on Roberts Road will inhibit the ability of long vehicles to safely make wide turns in order to enter from or exit to the north.                                                                                                                                                                                                                                                                                                                                                                                                                                              | The other two intersection (Roberts Rd / Juno Pde<br>and Hume Highway / Cosgrove Rd) are already<br>approved to provide appropriate access for 25 m<br>B-doubles.<br>SPC has agreed with the RTA that this<br>intersection will be enhanced to improve traffic<br>flow including B - double movements i.e. SPC to                                                                                                                              |  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | consider a left turn slip lane to improve access to the ILC                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Rather than the lack of need for intersection<br>enhancement concluded in the SKM report, it is<br>recommended that the intersection of Roberts Road<br>and Norfolk Road be completely<br>reconfigured in order to adequately meet the needs<br>of this proposal.                                                                                                                                                                                                                                                                                                | No upgrade is necessary to allow for adequate<br>signal operation. However, as stated in Chapter 7<br>of the EA, this intersection will be enhanced to<br>improve traffic flow. See above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| On-street parking in the kerbside lane to within 10<br>metres of the intersection prevents any<br>left turning vehicles accessing the stopline when a<br>long vehicle is held at the stopline in the<br>right hand lane. These two issues combined results<br>in a residual queue being generated<br>which was observed to extend beyond the<br>intersection of Norfolk Road and Wentworth<br>Street. As the number of vehicles, and the proportion<br>of long vehicles, increases as a<br>consequence of this development, this problem will<br>be exacerbated. | The removal of on-street parking on the<br>approaches to the intersection would be<br>considered as part of the detailed design process<br>for the intersection.<br>See comment above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| Wentworth Street is currently a local road, however,<br>under this proposal it would become the primary<br>access point to the Enfield Intermodal Logistics<br>Centre and carry a significant increase in heavy<br>goods vehicles. Moreover, a large proportion of<br>those HGVs would be long vehicles, specifically<br>B-Double in classification. Wentworth Street was<br>neither designed nor built to withstand the burden of<br>this increased demand.                                                                                                     | Wentworth Street is already heavily used by large<br>vehicles, and is approved for use by 23m<br>B-doubles. The surrounding land use is<br>industrial, with many heavy-vehicle generating<br>developments already in place. The use of<br>Wentworth Street by the ILC is consistent with<br>current usage of this road.                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| From the SKM report, Wentworth Street "south of<br>Mayvic Street has deteriorated and the pavement<br>needs rehabilitation in addition to upgrade works<br>(widening). Although a detailed survey has not been<br>conducted as apart of this review, the on-site<br>inspection indicated that the current radii of the<br>intersection Wentworth Street and Norfolk Road are<br>not adequate to cater for long vehicles, in particular<br>B-Doubles                                                                                                              | Council and the RTA have previously (June 2005)<br>undertaken tests with 25m B-doubles at Roberts<br>Road / Norfolk Road. The testing indicated a<br>problem with the left turn into Norfolk Road. This<br>turn would be possible with intersection<br>improvements (i.e. splayed intersection<br>approach-left turn in form Roberts Road). Council<br>indicated no problems with other movements at<br>this intersection with a 25m B double.<br>SPC has agreed with the RTA that this<br>intersection will be enhanced to improve traffic<br>flow including B - double movements i.e. SPC to<br>consider a left turn slip lane to improve access to<br>the ILC.<br>Council indicated no problems with other<br>movements at this intersection. |  |

|                                                           | Local area traffic management measures for             |
|-----------------------------------------------------------|--------------------------------------------------------|
| Cosgrove Road / Punchbowl Road -                          | Cosgrove Road will be considered during detailed       |
| The SKM report identifies the residential land use on     | design to prevent large vehicles travelling south      |
| the southern end of Cosgrove Road,                        | on Cosgrove Rd.                                        |
| however, other than a superficial comment that            | No intersection improvements are being                 |
| heavy vehicles should be routed away from                 | considered for the Cosarove Road/Hume Hwv              |
| this area there is no firm proposal of how this would     | intersection. Trucks will be monitored and             |
| be managed. This issue is particularly important          | controls implemented to prevent trucks, entering       |
| given the fact that the aaSIDRA analysis currently        | and leaving the ILC site, using Cosprove Road          |
| shows the intersection of Cosprove Road and the           | south. However, heavy vehicles currently use this      |
| Hume Highway as being oversaturated with                  | road to access the industrial land uses along          |
| conditions deteriorating over time. The temptation of     | Cosgrove Rd. Truck access to the residential           |
| users of the Enfield II C to seek alternative access      | area east of Cosgrove Rd is limited by the chicane     |
| and earess points from the site would be significant      | in Madeline Street and Blanche Street being            |
| Therefore, the proponents should detail proposals         | one-way westbound                                      |
| for the management traffic in Cosgrove Road and           |                                                        |
| give consideration to its closure at its intersection     |                                                        |
| with Punchbowl Road                                       |                                                        |
|                                                           |                                                        |
| Public Transport - Given the poor access to public        | On-site parking will be provided for all employees     |
| transport for workers at the site and their likelihood of | at the site. The requirement for parking has been      |
| using their own vehicles to travel to and from work.      | discussed within the EA in Section 3.6.1 of            |
| Strathfield Municipal Council, requests more              | Appendix B. The actual parking arrangements            |
| detailed proposals of on-site parking provisions for      | would be addressed as part of the detailed design      |
| private vehicles.                                         | stage.                                                 |
|                                                           |                                                        |
| It is suggested that the "Final Transport Working         | Our traffic counts and analysis indicate that the      |
| Paper - Operational Traffic                               | average delay for all vehicles at this intersection is |
| Impact Assessment" conducted by Sinclair Knight           | 20 seconds in both the AM and PM peak hours.           |
| Merz significantly underestimates the                     | While the average delay on some movements              |
| current performance of Roberts Road and its               | may be high, the average delay on others would         |
| intersection with Norfolk Road. Their                     | be minimal, resulting in an acceptable overall         |
| conclusion that "the Roberts Road / Norfolk Road is       | level of delay. Our analysis is presented in the       |
| operating with spare capacity and no                      | report which states that the intersections operate     |
| intersection enhancement is required" does not            | at an acceptable level of service.                     |
| reflect the current traffic conditions and the            | Norfolk Rd/Wentworth St is approved for use by         |
| impact that this development will have on its             | 23m B-doubles between Roberts Road and Metro           |
| operation. Given that this intersection will carry        | Smallgoods. It would be appropriate to extend the      |
| the stated "approximately 75%" of the traffic             | approval to the ILC entry.                             |
| generated by this proposal it is critical that the        | Councils and the RTA have previously (June             |
| identified deficiencies be rectified before the           | 2005) undertaken tests with 25m B-doubles at           |
| development is allowed to proceed.                        | Robert Rd/Norfolk Rd. This turn would be               |
|                                                           | possible with intersection improvements (i.e           |
|                                                           | splayed intersection approach- left turn in from       |
|                                                           | Roberts Rd). Council indicated no problems with        |
|                                                           | other movements at this intersection with a 25m        |
|                                                           | B-double. SPC has agreed with the RTA to               |
|                                                           | enhance the intersection to improve traffic flow for   |

| -                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                           |  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
|                                                                                                                                                                                                                                                 | B-double movements.                                                                                                                                                                                                                                                                                                                       |  |
| Extension of the proposed Cycleway from Begnell<br>Field through bridged across the site to Wentworth<br>Rd, Greenacre should be considered to increase<br>access to the population in Greenacre isolated by<br>the facility and railway lines. | SPC is not proposing any off site bicycle paths                                                                                                                                                                                                                                                                                           |  |
| If approval is granted for Enfield ILC the following conditions should apply.                                                                                                                                                                   | Noted.                                                                                                                                                                                                                                                                                                                                    |  |
| - Wentworth St and Norfolk Rd be re-classified to<br>State Highways and that the RTA assume full<br>responsibility for these                                                                                                                    | This is an issue between the RTA and Council.                                                                                                                                                                                                                                                                                             |  |
| - A full Road Safety Audit on both a Regional and<br>Local level should be undertaken in<br>consultation with all local Councils in the catchment<br>area                                                                                       | A Road Safety Audit is not considered necessary at this stage.                                                                                                                                                                                                                                                                            |  |
| - A full pavement condition audit is undertaken, of all<br>roads affected by the proposal, to<br>assess the capacity of these roads to carry the<br>proposed vehicle loadings in terms of both<br>numbers and weight                            | A pavement condition study was undertaken and is included in the EA – See Appendix B.                                                                                                                                                                                                                                                     |  |
| - The proponent recommends that a number of<br>intersections be upgraded. Council supports<br>this recommendation but would suggest that the<br>re-construction required take place prior to<br>any approval being granted                      | The intersection upgrades are likely to be required even without the development of the ILC. This is an issue to be discussed with the RTA and Council.                                                                                                                                                                                   |  |
| - The intersection of Roberts Rd and Norfolk Rd<br>needs to be completely reconfigured considering it is<br>expected to carry approximately 75% of the traffic<br>generated by the proposal                                                     | SKM analysis shows that this intersection has<br>spare capacity in terms of overall intersection<br>performance It is proposed in Chapter 7 of the EA<br>that this intersection is improved. SPC propose to<br>improve the intersection to cater for B-doubles to<br>negotiate the left turn lane from Roberts Road into<br>Norfolk Road. |  |
| - The suggestion that the RTA investigate options to improve the operation of Centenary Drive and Arthur St be supported                                                                                                                        | Noted                                                                                                                                                                                                                                                                                                                                     |  |
| - Local area traffic management measures for<br>Cosgrove Rd and surrounding streets be further<br>investigated to optimise the access / egress<br>arrangements to the proposed site                                                             | Local area traffic management measures are<br>being considered for Cosgrove Road south and<br>the Norfolk Road / Roberts Road area.                                                                                                                                                                                                       |  |

| - The proponents recommendation for widening the<br>Hume Highway be supported                                                                                                                                                                                                                                                                                                                                                          | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| <ul> <li>Review the possibility of linking Gould St to<br/>Cosgrove Rd</li> <li>Review the possibility of linking Gould St to the<br/>existing internal Road within the proposed<br/>Site</li> </ul>                                                                                                                                                                                                                                   | Several access points have been considered and<br>thoroughly documented by Sydney Ports<br>Corporation. This was summarised in the EA.                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| - Liaise with the RTA regarding signal-phasing<br>adjustments for all critical intersections within<br>close proximity to the proposed site to maximise the<br>road network efficiency                                                                                                                                                                                                                                                 | The RTA is responsible for the operation of the intersections and the optimal signal timing. SPC will liaise with the RTA as part of the Traffic Working Group to optimise the future performance of the intersections                                                                                                                                                                                                                                                                                                |  |  |
| -The application calls for significant numbers of<br>B-double vehicles to use Wentworth St and Norfolk<br>Rd. With this in mind, Norfolk Rd is approved only<br>for use by 23m B-doubles and Wentworth St is not<br>approved for B-double use. It is unlikely that Council<br>would approve Wentworth St for B-double use in<br>the short term due to issues related to alignment<br>and pavement capacity                             | Norfolk Road / Wentworth Street is approved for<br>use by 23m B-doubles between Roberts Road<br>and Metro Smallgoods. It would be entirely<br>appropriate to extend the approval to the ILC<br>entry.                                                                                                                                                                                                                                                                                                                 |  |  |
| It is recommended that the traffic signal phasing<br>(Roberts Road and Norfolk Road) be altered to<br>eliminate the current filter right turn movement from<br>the eastern arm of Norfolk Road by providing a<br>controlled right turn movement. Although the overall<br>"lost time" of the intersection will consequently<br>increase, the gains in efficiency of the side road<br>movements will more than outweigh the disbenefits. | A separate Right Turn phase has been analysed<br>using INTANAL. This improves egress from the<br>ILC but has a negative effect on the performance<br>of the intersection.<br>SPC will discuss the intersection operation with<br>the RTA during the detailed design stage.                                                                                                                                                                                                                                            |  |  |
| It is recommended that the intersection of Norfolk<br>Road and Wentworth Street be surveyed and a<br>Road Safety Audit conducted to ensure that long<br>vehicles can safely negotiate the corner without<br>crossing to the wrong side of the road.                                                                                                                                                                                    | Norfolk Road/Wentworth Street is approved for<br>use by 23m B-doubles. Swept path analyses were<br>undertaken subsequent to the submission of the<br>EA. In addition, Council and the RTA has<br>previously (June 2005) undertaken tests with 25m<br>B-doubles at Roberts Road / Norfolk Road. The<br>testing indicated problems with the left turn into<br>Norfolk Road. SPC expects this left turn will need<br>to be re-configured. Council indicated no<br>problems with other movements at this<br>intersection. |  |  |
| Given the significant amount of upgrading and<br>on-going maintenance required it is recommended<br>that Wentworth Street be reclassified as a State                                                                                                                                                                                                                                                                                   | This is an issue between Council and the RTA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |

| Road and become the responsibility of the Roads and Traffic Authority, NSW.                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| The on-street parking on the southern side of the<br>eastern arm of Norfolk road approaching Roberts<br>Road detrimentally affects the efficiency of the<br>intersection. It is recommended that on-street<br>parking on the southern side of the eastern arm of<br>Norfolk Road be prohibited for a distance of 50m.  | Banning parking for this length would improve<br>intersection operation. Alternative parking<br>arrangements could be incorporated into the<br>detailed design for the intersection. This will be<br>further assessed when the intersection is<br>designed                                                                                                                                                                                                                                                            |  |
| <u>Centenary Drive / Arthur Street -</u><br>It is recommended that the suggestion that the RTA<br>investigate options to improve the operation of<br>Centenary Road and Arthur Street be supported as<br>the performance of this intersection will deteriorate in<br>line with growth in traffic demands.              | Noted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| The proponents should give consideration to the connection of Gould Street to Cosgrove Road, and/or, the existing internal road within the site, with the aim of providing an alternate egress / access arrangement thereby relieving some of the congestion at the intersection of Cosgrove Road and the Hume Highway | Linking Gould Street to Cosgrove Road has been<br>considered subsequent to the submission of the<br>EA. Analysis of alternative entry / exit points was<br>also undertaken by SPC as part of the previous<br>studies for Enfield. Intersection upgrade at<br>Cosgrove Road / Hume Highway is still required<br>in the future – even with Gould Street and<br>Cosgrove Road being linked.                                                                                                                              |  |
| <ul> <li>The traffic recommendations of the review in terms of the current proposal are summarised below:</li> <li>the intersection of Roberts Road and Norfolk Road be completely reconfigured in order to adequately meet the needs of this proposal;</li> </ul>                                                     | Norfolk Road/Wentworth Street is approved for<br>use by 23m B-doubles. Swept path analyses were<br>undertaken subsequent to the submission of the<br>EA. In addition, Council and the RTA has<br>previously (June 2005) undertaken tests with 25m<br>B-doubles at Roberts Road / Norfolk Road. The<br>testing indicated problems with the left turn into<br>Norfolk Road. SPC expects this left turn will need<br>to be re-configured. Council indicated no<br>problems with other movements at this<br>intersection. |  |
| • the traffic signal phasing of Roberts Road and<br>Norfolk Road be altered to eliminate the current filter<br>right turn movement from the eastern arm of Norfolk<br>Road by providing a controlled right turn movement;                                                                                              | No upgrade is necessary to allow for adequate<br>signal operation. However, as stated in Chapter 7<br>of the EA, this intersection will be enhanced to<br>improve traffic flow ,in consultation with the RTA–<br>see responses above.                                                                                                                                                                                                                                                                                 |  |
| <ul> <li>the intersection of Norfolk Road and Wentworth<br/>Street be surveyed and a Road<br/>Safety Audit conducted to ensure that long vehicles</li> </ul>                                                                                                                                                           | Norfolk Road/Wentworth Street is approved for<br>use by 23m B-doubles. Swept path analyses were<br>undertaken subsequent to the submission of the                                                                                                                                                                                                                                                                                                                                                                     |  |

|         | can safely negotiate the corner;                                                                                                                                                                                                                                                                                                                                                                                                                                                  | EA. | Traffic | • Traffic Impacts; Council has concerns about the proposed access to and from the facility, the assumptions behind some of the traffic modelling, the impact on some already under performing intersections, the impact on arterial road congestion and adjoining residential land uses, and the need for State government commitment to a wider strategy of arterial road upgrading works to support the proposal.                                                                                                               | Noted. These issues are addressed as part of specific comments below.                                                                                                                                                                                                                                                                                                                                          | 815 | Bankstown City Council<br><b>DoP Submission Nos 164 &amp; 328</b> |
|         | • Traffic Impacts; Council has concerns about the proposed access locations to and from the facility, the assumptions behind some of the traffic modelling, the impact on some already under performing intersections, the impact on arterial road congestion and adjoining residential land uses, and the need for State government commitment to a wider strategy of arterial road upgrading works to support the proposal.                                                                                                     | Noted. These issues are addressed as part of specific comments below.                                                                                                                                                                                                                                                                                                                                          |     |                                                                   |
|         | Council is also concerned that the EAR has not<br>seriously considered an alternative access route to<br>and from the site (specifically a paired intersection<br>involving Gould Street and Cosgrove Rd onto the<br>Hume Highway) which we believe could<br>accommodate all traffic entering and leaving the<br>facility, and improve integration with the arterial road<br>network and negate the need for access via Roberts<br>Rd, and as a result would not generate undue traffic<br>impacts to the residents of Greenacre. | SPC has considered alternative access points as<br>part of the previous studies in 2001. A paired<br>intersection has been considered subsequent to<br>the submission of the EA. However, the<br>intersection between Cosgrove Road and Hume<br>Highway still requires upgrading in the future. The<br>junction is unable to accommodate 100% of traffic<br>from the site even with the upgrade in the future. |     |                                                                   |
|         | To support this option, our submission includes<br>a report by an independent consulting firm (Parsons<br>Brinckerhoff) that demonstrates that this access<br>route is feasible, and would not significantly impact<br>on the road network. The report (summarised in the<br>body of our submission) also identifies other<br>significant deficiencies in the EAR which further<br>highlight our concerns about the traffic impacts.                                                                                              | Noted.                                                                                                                                                                                                                                                                                                                                                                                                         |     |                                                                   |
|         | Only 2 access points are proposed into the site.<br>These are via Cosgrove Rd, from which trucks will<br>gain access to the Hume Highway and thence to<br>Centenary Drive, and secondly, via a bridge to                                                                                                                                                                                                                                                                                                                          | The distribution in the model minimises the travel<br>time for ILC vehicles. As the majority of<br>destinations are west of Enfield, the Roberts<br>Road access is more popular. The expected split                                                                                                                                                                                                            |     |                                                                   |

| Wentworth Street and thence onto Norfolk Rd and<br>onto Roberts Rd. It should be noted that the traffic<br>modelling shows that almost all the traffic will go in<br>and out via this latter access way.                                                                                                                                                                                                                                                                                                                                                                                                                                              | between Norfolk Road and Cosgrove Road is 75%/25%, due to the layout of the site and operations.                                                                                           |  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| The impact of the additional traffic generated by the<br>proposed terminal was assessed by a model<br>(calibrated by local traffic surveys), which modelled<br>natural traffic growth projections for the area and<br>adding the traffic generated by this development<br>proposal.                                                                                                                                                                                                                                                                                                                                                                   | Enfield ILC contributes less than 1% of overall traffic and therefore the impact of Enfield on the local and regional road network is negligible.                                          |  |
| This assessment was analysed both with and<br>without the proposal going ahead, to compare the<br>effect of background traffic growth with the impact of<br>the development. This analysis indicated that for<br>almost all roads where the traffic counts were made<br>that for peak periods, in both the morning and<br>afternoon, there would be an inappreciable impact<br>on traffic volumes as a result of truck movements<br>generated by this facility.                                                                                                                                                                                       |                                                                                                                                                                                            |  |
| The following 2 examples are provided to demonstrate this:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | No comment required                                                                                                                                                                        |  |
| Boronia Road in the Morning Peak. Travelling west<br>along Boronia road in the morning peak there are<br>presently 400 vehicles, 30 of which are heavy<br>vehicles. By 2016, based on natural traffic growth<br>there will be 830 vehicles, 70 of which will be trucks.<br>However only 3 of these will be as a result of the<br>proposed Sydney Ports facility. This indicates that<br>the additional trucks caused by the facility, when<br>compared against the projected future growth, and<br>even against the existing situation is not significant in<br>terms of traffic volume.                                                              | Noted.                                                                                                                                                                                     |  |
| Roberts Road in the Afternoon Peak. Presently<br>travelling north along Roberts Road in the afternoon<br>peak hour are 2020 vehicles consisting of 260 heavy<br>vehicles. By the year 2016 there will be 2410<br>vehicles making this same journey but the number of<br>heavy vehicles has actually dropped to 190. (Sydney<br>Ports was contacted to find out why the vehicle<br>numbers had dropped but have not responded to my<br>query) Of this, 8 are attributable to the proposed<br>terminal. Again this volume is considered<br>insignificant in comparison to the total number of<br>trucks. Similar results were reported for other roads, | Noted.<br>There will be some redistribution of traffic across<br>the network, due to the way traffic is assigned in<br>the network model, which is sensitive to changes<br>in travel time. |  |

| and it was concluded that the truck volumes<br>generated by the facility would not be sufficient to<br>cause an impact on the road network in terms of<br>additional traffic, having regard to existing and<br>projected traffic volumes.                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Site Access arrangements, and associated impacts<br>on the Local Road Network.<br>The traffic projections included in the EAR indicate<br>that almost all traffic entering or leaving the site will<br>do so via the access onto Roberts Rd. Trucks will<br>turn either north or south along Roberts Rd<br>depending upon their final destination. Only 1 or 2<br>trucks are shown entering or leaving the facility via<br>the Cosgrove Rd access point and then turning onto<br>the Hume Highway from where they either go east or<br>west along the Hume Highway or north along<br>Centenary Drive. | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| Whilst we understand that this situation arises<br>because of the Cosgrove Rd/ Hume Highway<br>intersection being at full capacity, we nevertheless<br>believe this to be an inequitable way of distributing<br>the traffic entering and leaving the site, since there<br>will be greater impact on roads that pass through a<br>residential area within the Bankstown LGA, rather<br>than integrating directly with the Hume Highway<br>corridor.                                                                                                                                                    | The distribution in the model minimises the travel<br>time for ILC vehicles. As the majority of<br>destinations are west of Enfield, the Roberts<br>Road access is more popular. The expected split<br>between Norfolk Road and Cosgrove Road is<br>75%/25%, due to the layout of the site and<br>operations.                                                                                                                                                  |  |
| Whilst the assessment has shown that the traffic impacts are minimal in terms of traffic volumes and impacts on intersection capacity, it will remain the case that some 1160 trucks per day will be entering or leaving the site on the roads through Bankstown as a result of the proposed development.                                                                                                                                                                                                                                                                                             | Enfield ILC contributes to less than 1% of overall traffic and therefore the impact of Enfield on the local and regional road network is negligible.                                                                                                                                                                                                                                                                                                           |  |
| This is a significant increase, and is likely to be<br>associated with other environmental impacts,<br>including traffic noise and congestion, air pollution,<br>potential disruption to existing land uses, disruption<br>to existing residential character of existing roads in<br>Greenacre.                                                                                                                                                                                                                                                                                                       | See response above, In addition, it should be<br>noted that there are some 7000 heavy vehicles<br>(11% of total) currently using Roberts Road each<br>weekday, and about 4600 heavy vehicles (9%)<br>using the Hume Highway. The ILC vehicles will<br>not be concentrated on a single road, allowing<br>any impact to be more easily absorbed. The other<br>environmental impacts have been considered and<br>presented in the appropriate sections of the EA. |  |
| Impact on Boronia Rd/Juno Pde                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |

| One of Bankstown Council's main concerns about<br>traffic impacts is the potential for impact on the roads<br>in Bankstown caused by the use of roads passing<br>through residential areas.<br>We note that Roberts Rd and Boronia Road have<br>both been identified as suitable for use by trucks<br>entering and leaving the facility. Whilst the EAR<br>shows that projected truck volumes for Boronia              | Boronia Road / Juno Parade are State Roads and<br>also permitted routes for B-Doubles. They have<br>not been nominated for use by ILC vehicles, but<br>identified as potential routes that could be used by<br>vehicles accessing the ILC facility. Our modelling<br>indicates that the volume of ILC traffic that would<br>use these roads is low.<br>The ILC traffic using Boronia Road accounts for<br>less than 1% of future traffic (6 vehicles per hour |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Street will be low, we object strongly to the use of<br>Boronia Rd/Juno Pde as a route for trucks<br>associated with this facility. The justification for<br>trucks using Boronia Rd/Juno Pde is that it is<br>classified as a State Road.                                                                                                                                                                             | in AM and PM peak). It is not considered that the ILC traffic will adversely impact on Boronia Road.                                                                                                                                                                                                                                                                                                                                                          |  |
| However, it is also true that Boronia Rd/Juno Pde is<br>totally different in character to the other State roads<br>(such as the Hume Highway, M5 Motorway,<br>Centenary Road) that have been nominated as the<br>main access routes for trucks moving to and from<br>this facility.                                                                                                                                    | The difference in character is noted.                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| It is clear from a site inspection of Boronia Rd that in<br>spite of its classification, it is a residential<br>road in its character, being lined by residential<br>dwellings, and furthermore, it has not been<br>constructed to the same standard as the other State<br>roads that have been nominated.                                                                                                             | Noted. This is an issue between Council and the RTA.                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| We object to Boronia Rd being identified as a route<br>that is able to be used by trucks and from this facility<br>as we believe that this will cause a diminution of the<br>residential character of this road, and more<br>importantly will result in unacceptable traffic, noise<br>and potential road safety impacts to the residents of<br>this road, as well as similar impacts at the Greenacre<br>town centre. | There was no evidence presented to support this comment. The ILC traffic using Boronia Road accounts for less than 1% of future traffic (6 vehicles per hour in AM and PM peak). It is not considered that this will adversely impact Boronia Road.                                                                                                                                                                                                           |  |
| Furthermore, the identification of Boronia Rd and<br>Roberts Rd as State Roads has already lead to them<br>being used in a way that has resulted in significant<br>cumulative impacts and loss of amenity to the people<br>that live along these roads. Complaints from<br>residents about this matter were received by Council<br>officers during the submission period for this<br>proposal.                         | This is an issue between Council and the RTA.                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| As noted in the EAR traffic volumes are forecast to grow significantly along these roads and this will only                                                                                                                                                                                                                                                                                                            | This is an issue between Council and the RTA.                                                                                                                                                                                                                                                                                                                                                                                                                 |  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 1 |  |

| result in further loss of environmental quality.<br>Council considers that<br>the RTA should fund works to help redress the<br>impacts of this including noise barriers and a more<br>noise absorptive surface to ensure that such loss of<br>amenity is minimised.                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |  |
| Other Impacts on Local Roads.<br>Bankstown Council is also concerned about<br>the possibility of truck movements along other roads<br>with a residential character. Again this may arise<br>from trucks leaving the facility and travelling along<br>Roberts Rd from where they could easily attempt to<br>access the Hume highway by using non - State<br>roads such as Rawson Rd, Norfolk Rd (and other<br>like roads).                                                                                                                                                                                                                                          | The Movement of trucks through the residential<br>area will be restricted, and managed through<br>LATM measures to be undertaken with the RTA<br>and Councils.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |  |
| These roads (like Boronia Rd) are also residential in<br>character but are not classified as a state roads, and<br>so legally should not be used by large trucks, and we<br>certainly object to any use of these roads by trucks<br>from the facility.                                                                                                                                                                                                                                                                                                                                                                                                             | Noted. The majority of streets in the residential<br>area of Greenacre are load limited roads and<br>therefore large vehicles are unable to use these<br>roads. See response above.                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |  |
| Whilst the EAR acknowledges that this should not<br>occur and points to Local Area Traffic Measures as a<br>means of preventing this<br>from occurring, this is made as a general<br>recommendation, with no specific measures being<br>proposed, and Council has no confidence at this<br>stage that the LATMs will work, particularly outside<br>peak times.                                                                                                                                                                                                                                                                                                     | Noted. See response above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |  |
| Another source of impact on the local roads which<br>has not been assessed in the EAR is the likely<br>increase in the use of residential roads in the area by<br>cars that are taking detours to avoid the state roads<br>that will become busier as a result of the additional<br>trucks using them. This matter has not been<br>addressed in the EAR, nor have any mitigation<br>measures proposed. It could however be reduced if<br>the issue of access to and from the site was<br>reviewed such that essentially all of the access was<br>not provided via Roberts Rd, and better levels of<br>access were provided to Cosgrove Rd and the Hume<br>Highway. | The ILC would not significantly impact on delays<br>at intersections in the area. The potential for<br>rat-running for large vehicles will be addressed<br>through the LATM measures that SPC would<br>develop in consultation with Council and the RTA.<br>Rat-running by private vehicles is more difficult to<br>manage without detrimentally impacting on the<br>route choice of residents and local public<br>transport vehicles. The ILC contributes less than<br>1% of the traffic on the road network. Background<br>traffic growth is the contributor to diminished<br>future road and intersection performance. |   |  |
| ii) Concerns about the Modelling Included in the <u>EAR.</u><br>The underlying assumption is for container activity of                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | The ILC is designed to handle up to 300,000                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |  |

| 300,000 TEUs to generate traffic from the proposed<br>development. However the EAR did not assess the<br>traffic impact as a direct result of the change in this<br>assume throughput, that could eventuate if some of<br>the other proposed intermodal terminals do not<br>proceed, or if there is a variation in rail throughput; | TEU .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| • The EAR traffic models for the morning peak<br>periods cover the one-hour time period within each<br>of these peak periods. However the<br>Sydney commuter road network has longer<br>commuter peak periods.                                                                                                                      | The models used in the EA assess the peak<br>one-hour period in the morning and afternoon.<br>These are the periods of maximum impact.<br>Assessment of one-hour peak periods is standard<br>industry practice.                                                                                                                                                                                                                                                                                                                                                            |  |
| Ideally the morning model included in the EAR<br>should have had a 2 hour peak period from 7.00am -<br>9.00 am while the evening peak periods should have<br>had a three hour period from 3.00pm - 6.00pm;                                                                                                                          | See previous response.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| • The EAR traffic model was not benchmarked against the Transport and Population Data Centre's Metropolitan Strategic Travel model;                                                                                                                                                                                                 | The 2005 base trip table has been calibrated for observed volumes at some 15 key locations in the Enfield area, identified in the EA.                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| <ul> <li>It is unknown how the existing base year trip<br/>matrix was derived. This could lead to considerable<br/>variations in the traffic impacts from the facility;</li> </ul>                                                                                                                                                  | The trip table from which the base table was calibrated has evolved from previous projects, where calibration has also been undertaken.                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| • The traffic model included in the EAR does not<br>appear to have captured the effects of regional traffic<br>surrounding the proposed facility, as the models<br>were calibrated using counts undertaken within the<br>immediate vicinity of the site. The use of RTA<br>screenlines would have helped in this regard;            | The counts collected for this project do include<br>regional (as well as local) traffic that use the road<br>network in the vicinity of the ILC. In the context of<br>the study, the model is not being used to forecast<br>traffic diversion due to a new link or other network<br>issue. The impact of the ILC is confined to a<br>relatively small area (see Figure 2.2 of the EA<br>Appendix B, which was discussed with the RTA at<br>the commencement of the study). It is appropriate<br>to concentrate on the sub-regional level rather<br>than the wider network. |  |
| <ul> <li>The EAR traffic model has not met major<br/>screenline calibration standards thereby resulting in<br/>less robust modelling results;</li> </ul>                                                                                                                                                                            | The cited additional calibration measures are only<br>relevant to a regional model assessing wider<br>implications of network change (eg a new link or<br>road closure). The impact of the ILC is limited to<br>the sub-regional level, and the adopted calibration<br>process is appropriate.                                                                                                                                                                                                                                                                             |  |
| • The EAR indicated that the 2016 base trip matrix                                                                                                                                                                                                                                                                                  | SKM used trips matrices for future trips relevant to                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |

| was developed using population and employment<br>forecasts provided by DIPNR, but has not shown the<br>changes between 2005 and 2016;                                                                                                                                                                                                                                                                        | 2016. The 2016 matrices have been used reliably<br>by SKM for several years to forecast future traffic<br>growth. Specific and significant changes were<br>added to the matrices to reflect Port Botany<br>expansion and Sydney Airport future growth (as<br>documented).                                                                                                                                                                         |  |  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| • The EAR did not indicate which vehicle categories were included in the traffic model's commercial trip table nor did it explain the process applied for developing the future commercial trip table;                                                                                                                                                                                                       | The commercial vehicle trip table includes an estimation of heavy vehicle activity, and was calibrated in the local area for 2005 counts. The future commercial vehicle matrix takes into account growth in industrial activity across Sydney.                                                                                                                                                                                                    |  |  |
| • The traffic assignment technique used is also<br>unclear and how commercial vehicles were<br>converted into equivalent passenger car units;                                                                                                                                                                                                                                                                | The truck matrix in NETANAL is used to estimate<br>the effect of heavy vehicles on link and<br>intersection capacity. It is not used on a<br>stand-alone basis. The proportion of heavy<br>vehicles in the traffic stream is one of the inputs to<br>the INTANAL intersection models.<br>The PCU factors are documented in the working<br>paper. The INTANAL default pcu factor of 2 for<br>heavy vehicles was not modified for this project.     |  |  |
| In Summary some of these deficiencies may on their<br>own be of minor significance. However, when<br>considered cumulatively they indicate that it is simply<br>not possible to have confidence about the findings of<br>the traffic analysis. Given the significance of traffic<br>impact to this proposal, this is a matter of great<br>concern.                                                           | The modelling approach used for the EA is<br>appropriate for the assessment of the impact of<br>the ILC. The findings of the traffic study are<br>supported by an analysis of existing conditions,<br>which reveal that many intersections around the<br>ILC are already approaching capacity. Future<br>background growth in traffic volumes,<br>independent of the ILC, are likely to result in<br>conditions as outlined in the traffic study. |  |  |
| <u>Concerns About Intersection Performance.</u><br>In reviewing the EAR, Council considered that it<br>seemed to have glossed over the issue of<br>intersection performance, and the adequacy of<br>existing intersections.                                                                                                                                                                                  | The key intersections surrounding the ILC were<br>analysed. The intersection analysis and reporting<br>undertaken is appropriate for the assessment of<br>the impact of the ILC                                                                                                                                                                                                                                                                   |  |  |
| One reason that we considered this to be the case<br>was because of Councils knowledge of the road<br>network in Bankstown. In particular, we know that<br>the that the Roberts Rd/Norfolk Rd intersection is<br>already performing very poorly, as there are often<br>pronounced northbound delays along Roberts Rd in<br>the AM peak. However, this did not seem to be<br>suitablyacknowledged in the EAR. | The analysis undertaken was based on data<br>collected by an independent traffic counting<br>company, specifically for this project. While there<br>may be congestion experienced at times<br>conditions are such that satisfactory Levels of<br>Service are achieved across the space of an hour.<br>The analysis undertaken as part of the EA in<br>industry standard practice.                                                                 |  |  |

| To further consider the issue of intersection<br>performance, PB were asked to address this matter<br>by the "swept path" technique. This technique looks<br>at the actual physical space occupied by large<br>vehicles as they turn through intersections, and<br>provides a more thorough and reliable way of<br>assessing intersection performance. The EAR did<br>not include a swept path analysis of large vehicle<br>movements at critical intersections, and Council<br>(and PB) considered this to be a major deficiency in<br>the traffic assessment.                                                                                                                                        | Noted. Swept path analyses were undertaken<br>subsequent to the submission of the EA, to<br>determine possible traffic management measures<br>for the Roberts Road / Norfolk Road intersection.<br>Subsequently, swept path analysis has been<br>undertaken on Hume Highway / Cosgrove Road<br>and Boronia Road / Roberts Road intersections.<br>Strathfield Councill and the RTA have previously,<br>(June 2005) undertaken tests with 25m B-doubles<br>at Roberts Road / Norfolk Road. The testing<br>indicated a problem with the left turn into Norfolk<br>Road. This turn would be possible with<br>intersection improvements (i.e. a splayed<br>intersection approach – left turn in form Roberts<br>Road). Council indicated no problems for other<br>movements at the intersection with a 25m<br>B-double. |  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| A complete account of the "swept path" analysis is<br>included in PB's report that is attached to this<br>submission. In summary this analysis was<br>undertaken for 3 intersections where future freight<br>traffic was of concern due to the existing<br>configuration and their ability to handle and increase<br>in the number of large vehicle movements. The<br>intersections selected for a swept path analysis<br>were:<br>• Roberts Rd and Norfolk Rd<br>• Roberts Rd and Juno Pde; and<br>• Liverpool rd and Cosgrove Rd.<br>In summary, PB found critical shortcomings in the<br>ability of all 3 intersections to accommodate heavy<br>vehicles, and suggested that they would all need to | These intersections currently handle large<br>vehicles and Norfolk Road, Juno Parade and<br>Cosgrove Road are all permitted for use by<br>B-doubles. As such the use of these roads by the<br>ILC should not be a concern.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| be upgraded.<br>Whilst some of the turning movements were found to<br>be physically possible, it may have meant for<br>example making a left hand turn from a through lane.<br>This was found to be undesirable since it could<br>increase the risk of collisions and put vulnerable<br>road users at risk, as well as delaying through traffic.<br>Similarly, a right turn should not have to be made<br>from through lanes, particularly when heavy vehicle<br>movements of some 1200 movements per day are<br>expected.                                                                                                                                                                             | It is noted that these vehicles may not be able to<br>make certain manoeuvres from their designated<br>lanes, but this is consistent with swept paths of<br>trucks and some public transport vehicles across<br>Sydney. The right turn from Roberts Road into<br>Norfolk Road has a designated right-turn bay.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                           |  | ļ |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|---|
| As noted, the EAR did not consider "swept path"<br>when assessing intersection capacity, and this is<br>considered to be a major deficiency in the<br>assessment. In particular, when the Roberts<br>Rd/Norfolk Rd and Liverpool Rd/Cosgrove Rd<br>intersections are being prosed as access points to<br>the site. At these two intersections, some semi-trailer<br>and B-Double turning movements are not physically<br>possible due to inadequate geometric clearance.                                                                                                                                                                 | See response above.                                                                                                                                                                                                                                                                                                       |  |   |
| The PB assessment found that the Roberts /Rd<br>Norfolk Rd intersection was more critical due to its<br>smaller turning radii, and it suggested that Roberts<br>Rd should not be used as access to the site, unless<br>the intersection with Norfolk<br>Rd was upgraded to accommodate the turning<br>requirements of large trucks.                                                                                                                                                                                                                                                                                                      | Noted. See response above. The re-design of the left turn in to Norfolk Road from Roberts Road will allow this.                                                                                                                                                                                                           |  |   |
| The PB report also provides other information<br>concerning the review of intersection performance<br>included in the EAR. It notes that the EAR only<br>assessed intersection capacity by considering level<br>of service and delays, and<br>that it did not show the extent of queuing or the<br>degree of saturation. Normally an analysis of<br>intersection performance would, besides<br>considering level of service and delay would also<br>include a review of the degree of saturation of the<br>intersection and queuing, as this provides a more<br>comprehensive understanding about how the<br>intersection is performing. | According to the RTA's Guide to Traffic<br>Generating Developments, "the best indicator of<br>the level of service at an intersection is the<br>average delay experienced by vehicles at that<br>intersection." The criteria for Level of Service<br>outlined in Table 4.2 of the Guide relate to<br>average delays only. |  |   |
| The failure in the EAR to consider these aspects of<br>intersection performance is an oversight and means<br>it is not possible to have the necessary level of<br>confidence in the findings of the EAR regarding<br>intersection performance                                                                                                                                                                                                                                                                                                                                                                                            | Given the growth in background traffic, the ILC contributes to less than 1% of overall traffic. As such the statement is considered unfounded.                                                                                                                                                                            |  |   |
| Other Council Concerns about Traffic<br>Conclusions Regarding Traffic Impacts:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                           |  |   |
| <u>Regarding traffic volumes</u> , the EAR finds that these<br>are acceptable because they will be just a small<br>component of the projected traffic growth in the area,<br>and that any impacts that will occur on the road<br>network or intersection capacity will be due to the<br>natural increase in traffic, and that the RTA will then<br>need to fix the resulting problems to the arterial road                                                                                                                                                                                                                               | The ILC will contribute less than 1% of traffic and its contribution to any network deficiencies will be very minor.                                                                                                                                                                                                      |  |   |

network. This is a rather disingenuous response to the issue and ignores the fact that the Sydney Ports proposal is responsible for a large volume of the traffic that will cause considerable problems, and that the performance of the proposed facility will be impacted by congestion at key surrounding intersections.

Internal Traffic Management. This matter has not been properly addressed. In particular, there is not enough detail on how truck movements and employee generated movements will impact, especially at time of shift change over. There are many industrial sites in Bankstown where shift changes generate serious traffic problems as employees try to access State roads. In this case the regardless. problem would be exacerbated with trucks also attempting to leave the site at what will be close to the peak projected time for truck movements to and from the facility. This issue needs further consideration, and again could be ameliorated to some degree if more heavy vehicle access could be provided via Cosgrove Rd.

### **Bankstown Councils Recommendations** Regarding Traffic Impact.

In conclusion. Council is concerned that essentially all the traffic impacts will be unnecessarily directed to the residents of Bankstown, although direct access to the Hume Highway is feasible and in our view desirable. Council considers that options for spreading the traffic more equitably should be considered more comprehensively in the EAR. In order to address our concerns we ask that consideration be given to the following issues:

#### A Preferred Alternative Access Arrangement.

Most importantly, Bankstown Council wishes to suggest an alternative access arrangement to and from the site, which is to provide primary access via Gould Street and Cosgrove Rd. Under this scenario, Road / Hume Highway were the preferred access Cosgrove Rd and Gould St would operate as a one-way link pair, with the traffic along Gould St flowing north (away from the site) and traffic along Cosgrove Rd flowing south – into the site. Both intersections with Liverpool Rd would operate under paired and co-ordinated signal control. An emergency second access point would also be provided to the facility under this option, at the

The impact of shift changeovers would be mitigated by the diverse range of origins and destinations of staff, and the site lavout. There would be greater use of Cosgrove Road by staff than there might be by trucks. Furthermore, many of the staff employed at the ILC may move from other jobs and may well be travelling at that time

Providing access to the Hume Highway would not change the origin and destinations of freight, which necessitates travel through the Bankstown LGA. However, ILC truck traffic would be directed to use designated arterial road routes.

SPC previously considered numerous alternative access points for the site. The conclusion was that Norfolk Road / Roberts Road and Cosgrove points. Access to the site via Punchbowl Road is not permitted. An analysis was undertaken subsequent to the EA of the one-way pair option. This indicated that while satisfactory operation of the 2 linked intersections (Gould Street and Cosgrove Road) would be achieved in the short term, with background growth, the 2-lane eastbound constraint on the Hume Highway

| southern section of Cosarove Rd, where it intersects                     | would result in unsatisfactory performance in the    |  |
|--------------------------------------------------------------------------|------------------------------------------------------|--|
| with Punchbowl Rd. Council had previously                                | future without the ILC. Even with 3-lanes            |  |
| requested that this access arrangement be                                | provided eastbound the Cosgrove Road                 |  |
| comprehensively considered and addressed in the                          | intersection would be at LoS E with 100% of ILC      |  |
| EAB A copy of a lotter issued by Coupsil to Sydney                       | traffic using it. This is the same result of         |  |
| EAR. A copy of a letter issued by Council to Sydney                      | decumented in the EA for 100% of ILC traffic         |  |
| Ports that includes this request is attached.                            | documented in the EA for 100% of IEC trainc          |  |
| However, in spite of our request, Sydney Ports has                       | using the Cosgrove Road Intersection. I herefore     |  |
| not seriously considered this alternative access                         | it is not feasible to channel all ILC vehicles       |  |
| arrangement involving the Gould St. and Cosgrove                         | through this intersection.                           |  |
| Rd intersections with Liverpool Rd operating as a                        | Furthermore, it would add further pressure to the    |  |
| paired intersection.                                                     | Hume Highway / Centenary Drive intersection, as      |  |
| To remedy this deficiency in the EAR, Council                            | a large proportion of ILC trucks would use           |  |
| requested PB to undertake a detailed review of this                      | Centenary Drive. Only allowing access via            |  |
| option for Council. The complete review by PB is                         | Cosgrove Road would take traffic off the             |  |
| included in their report, which is included as an                        | Centenary Drive / Roberts Road overpass and          |  |
| attachment to this submission.                                           | direct it through the at-grade intersection instead. |  |
|                                                                          | , , , , , , , , , , , , , , , , , , ,                |  |
| In summary however, PB found that this access                            | See response above                                   |  |
| arrangement is technically feasible both for existing                    |                                                      |  |
| and future traffic projections included in the EAR                       |                                                      |  |
| and would still provide for all relevant intersections                   |                                                      |  |
| (including the Centenary Drivel/Liverpool Pd                             |                                                      |  |
| interception to encrete with esticiatory conditions                      |                                                      |  |
| intersection to operate with satisfactory conditions                     |                                                      |  |

| intersections associated with the Roberts Rd access                      | No specifics were given as to which intersections    |  |
| would not need to be undertaken.                                         | PB were referring to along Roberts Road. The EA      |  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | does not identify any improvements to Roberts<br>Road intersections that would be required as a<br>result of the ILC.                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| In particular, The current intersection at Roberts Rd<br>and Norfolk Rd does not permit a B-Double to make<br>a left hand turn, and even a semi-trailer cannot make<br>a left hand turn without occupying the adjacent lane.<br>Upgrading would certainly be required at this<br>intersection, yet it appears that there is limited scope<br>to widen this intersection.                                                                                                         | Norfolk Road/Wentworth Street is approved for<br>use by 23m B-doubles. Swept path analyses were<br>undertaken subsequent to the submission of the<br>EA. In addition, Council and the RTA has<br>previously (June 2005) undertaken tests with 25m<br>B-doubles at Roberts Road / Norfolk Road. The<br>testing indicated problems with the left turn into<br>Norfolk Road. SPC expects this left turn will need<br>to be re-configured. Council indicated no<br>problems with other movements at this<br>intersection. |  |  |
| Similarly, other intersections along Roberts Rd<br>would not need to be widened or upgraded, thereby<br>involving cost savings to the RTA.                                                                                                                                                                                                                                                                                                                                       | No specifics were given as to which intersections<br>PB were referring to along Roberts Road. The EA<br>does not identify any improvements to Roberts<br>road intersections that would be required as a<br>result of the ILC                                                                                                                                                                                                                                                                                          |  |  |
| For these reasons, it is proposed by Council that this means of accessing the site is preferable to the access arrangement via Roberts Rd that is included in the EAR.                                                                                                                                                                                                                                                                                                           | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| Other Recommendations.<br>Other council recommendations regarding traffic<br>are:                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
| Identification of Designated routes for trucks and the<br>monitoring and enforcement of these routes. It will<br>be necessary to agree on designated routes for<br>traffic movements and to confine all truck movement<br>to these routes. The identified routes should be<br>specified clearly in any approval for the project given<br>by the Minister for Planning.                                                                                                           | The trucks from the ILC will be directed onto the surrounding arterial road network.                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |
| Boronia Road/Juno Pde should not be identified as<br>suitable for truck movements for reasons explained<br>above, and of course the other residential road in<br>Greenacre (including Rawson Rd. and Norfolk Rd<br>should definitely be made totally off limits to trucks.<br>There should be provision for on going compliance<br>monitoring of the use of these routes by Sydney<br>Ports, using measures such as driver induction<br>programs, cameras and traffic management | Boronia Road / Juno Parade is a designated State<br>Road and Heavy Vehicle Route. Rawson Road<br>and Norfolk Road have a 3-tonne limit in place.<br>Traffic management measures at Roberts Road /<br>Norfolk Road have been discussed with the RTA<br>and will be further explored with the Traffic<br>Working Group.                                                                                                                                                                                                 |  |  |

| measures to prevent trucks using non specified        |                                                     |  |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| SUMMARY and CONCLUSION in the EAR which<br>further highlight our concerns about the traffic<br>impacts.                                                                                                                                                  |                                                                                                                                                                                                                                        |  |
| <u>Traffic Impacts</u> ; Council has concerns about the proposed access locations to and from the facility, the assumptions behind some of the traffic modelling, the impact on some already under performing intersections, the impact on arterial road | Noted. These issues have been addressed as specific comments / responses in this document.                                                                                                                                             |  |
| congestion and adjoining residential land uses, and<br>the need for State government commitment to a<br>wider strategy of arterial road upgrading works to<br>support the proposal.                                                                      |                                                                                                                                                                                                                                        |  |
| Council is also concerned that the EAR has not seriously considered an alternative access route to                                                                                                                                                       | SPC previously considered numerous alternative access points for the site. The conclusion was that Norfolk Road / Roberts Road and Cosgrove                                                                                            |  |
| and from the site (specifically a paired intersection<br>involving Gould Street and Cosgrove Rd onto the<br>Hume Highway) which we believe could<br>accommodate all traffic entering and leaving the                                                     | Road / Hume Highway were the preferred access<br>points. Access to the site via Punchbowl Road is<br>not permitted. An analysis was undertaken<br>subsequent to the EA of the one-way pair ention                                      |  |
| facility, and improve integration with the arterial road<br>network and negate the need for access via Roberts<br>Rd, and as a result would not generate undue traffic<br>impacts to the residents of Greenacre. To support                              | This indicated that while satisfactory operation of<br>the 2 linked intersections (Gould Street and<br>Cosgrove Road) would be achieved in the short<br>term, with background growth the 2-lane                                        |  |
| this option, our submission includes a report by an independent consulting firm (Parsons Brinckerhoff) that demonstrates that this access route is feasible, and would not significantly impact on the road network.                                     | eastbound constraint on the Hume Highway<br>would result in unsatisfactory performance in the<br>future without the ILC. Even with 3-lanes<br>provided eastbound, the Cosgrove Road<br>intersection would be at LoS E with 100% of ILC |  |
|                                                                                                                                                                                                                                                          | traffic using it. This is the same result as<br>documented in the EA for 100% of ILC traffic<br>using the Cosgrove Road intersection. Therefore<br>it is not feasible to channel all ILC vehicles<br>through this intersection.        |  |
| The report (summarised in the body of our<br>submission) also identifies other significant<br>deficiencies                                                                                                                                               | The traffic impact assessment relating to Enfield ILC is not deficient. The reasons are as described in responses above.                                                                                                               |  |
| <b>COMMENTS FROM LETTERS IN 2005</b><br>I would like to re-iterate our concerns about traffic<br>impacts that were raised at this meeting by<br>Bankstown Council's representative (Martin<br>Beveridge).                                                | Noted.                                                                                                                                                                                                                                 |  |
| In particular, Council is concerned that if there is any                                                                                                                                                                                                 | Traffic management measures have been                                                                                                                                                                                                  |  |

| access from the facility onto Roberts Road, then this     | considered in consultation with the RTA regarding     |  |
|-----------------------------------------------------------|-------------------------------------------------------|--|
| will certainly result in large numbers of trucks          | prevention of access by B-Doubles into the            |  |
| attempting to access the Hume Highway via local           | residential area Juno Parade / Boronia Road is a      |  |
| roads in the Greenacre area, such as Juno/Boronia         | State Road and a designated B-double route            |  |
| Roads                                                     | However, its use by II C trucks would be minimal      |  |
| Norfolk Road, Rawson Road and possibly other              | Regardless of the ILC this route would still be       |  |
| roade as well                                             | used by trucke                                        |  |
|                                                           | used by flucks.                                       |  |
| In view of the lorge numbers of trucks that are           | Haavy wabialaa aurranthy maka up 129/ of AM           |  |
| appropriated with the propagal, we believe that the       | neavy vehicles currently make up 15% of Alvi          |  |
| associated with the proposal, we believe that the         | traffic on Derenio Deed. The IL C would add only      |  |
| movement of trucks along these roads would result         | traffic on Boronia Road. The ILC would add only       |  |
| in unacceptable impacts in a residential area. whiist     | 6 venicies per nour to this route. I ne difference in |  |
| it is true that Boronia Road has been designated as a     | character of Boronia Road is noted.                   |  |
| State Road, it is essentially a local residential road in |                                                       |  |
| its character and we believe that it does not have the    |                                                       |  |
| capacity of other State Roads (such as the Hume           |                                                       |  |
| Highway for example) to cope with the expected            |                                                       |  |
| volume of trucks generated by this facility.              |                                                       |  |
|                                                           |                                                       |  |
| Boronia Road also passes through the Greenacre            | There are presently heavy vehicles using this         |  |
| town centre, in which Council is presently                | route. The ILC would have a very minor marginal       |  |
| undertaking some major improvements. The value of         | impact.                                               |  |
| these improvements would be seriously undermined          |                                                       |  |
| by trucks passing along Boronia Road through the          |                                                       |  |
| Greenacre town centre.                                    |                                                       |  |
|                                                           |                                                       |  |
| Of the other roads mentioned above (Norfolk and           | Traffic management measures have been                 |  |
| Rawson) it is true that these are local roads and as      | considered in consultation with the RTA regarding     |  |
| such semi trailers are not permitted to use them.         | prohibiting trucks in the residential area. These     |  |
|                                                           | will be further discussed with the Traffic Working    |  |
|                                                           | Group. These roads already have 3-tonne limits in     |  |
|                                                           | place.                                                |  |
|                                                           |                                                       |  |
| Nevertheless we believe that given the large              | Heavy vehicles from the ILC will not be permitted     |  |
| numbers of trucks involved that it is inevitable that     | to use local streets.                                 |  |
| many trucks will use these roads, and that they will      |                                                       |  |
| cause unacceptable impacts to the residents of            |                                                       |  |
| these streets.                                            |                                                       |  |
|                                                           |                                                       |  |
| It was for these reasons that Council expressed its       | The access point onto Roberts Road is the key         |  |
| opposition to any access to or from the facility onto     | access point to the facility. This access point will  |  |
| Roberts Road at the meeting held on 31 May.               | enable direct access onto the arterial road           |  |
| 5                                                         | network for ILC vehicles.                             |  |
|                                                           |                                                       |  |
| As an alternative, Council requests that a                | See previous responses regarding one-way pair         |  |
| comprehensive evaluation be provided during the           | at Cosgrove Road / Gould Street                       |  |
| EIS process of providing all access to and from the       | <b>,</b>                                              |  |
| site from its northern areas at Gould Street and          | In addition, two access points are required into      |  |
| Cosgrove Road. This would ensure that the trucks          | the site as a safety and operational issue.           |  |

| would have direct access from the facility onto the<br>Hume Highway, from where they could access other<br>State roads travelling northwards or southwards, or<br>else remain on the Hume Highway. This option<br>would avoid any of the impacts on the local roads in<br>Greenacre that would be impacted on by the Roberts<br>Road option. | Directing all ILC traffic via Cosgrove Road would<br>add pressure to the Hume Highway / Centenary<br>Drive intersection, rather than allowing ILC trucks<br>to bypass traffic signals on the overpass.                                                                                                                                                                                         |  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| For these reasons, I confirm that Council does not<br>support the proposal in its present form, and will<br>remain opposed to it until the feasibility of the Gould<br>Street/Cosgrove Road option has been fully<br>assessed.                                                                                                               | Noted.                                                                                                                                                                                                                                                                                                                                                                                         |  |
| <b>COMMENTS FROM PARSONS B REPORT</b><br>The traffic assessment in the EA appears deficient in<br>a number of areas:                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                |  |
| • There is no overall Freight Strategy within which to measure the contribution of this project.                                                                                                                                                                                                                                             | The FIAB report prepared as part of the<br>Government's Metropolitan Intermodal Freight<br>Strategy for Import and Export Containers (refer<br>Metropolitan Strategy – Transport Strategy for<br>Sydney) supports the need for the Enfield ILC as<br>part of a number of intermodal terminals required<br>to serve the Sydney Basin and to achieve the<br>Government's rail mode share target. |  |
| • While the project is justified on the basis of increasing mode share of freight logistics to rail, there is no commitment to the rail upgrades necessary to make intermodal transfer attractive, which may result in poor forecasts of truck traffic.                                                                                      | The rail line is already operational and capable of<br>handling predicted trains to/from Enfield. The<br>Metropolitan Intermodal Freight Strategy<br>identifies the need for upgrade works in the longer<br>term to accommodate the overall development of<br>the intermodal freight strategy.                                                                                                 |  |
| • Much of the local impacts are to be mitigated by a heavy vehicle management plan and a local area traffic management plan but these are not provided in the document and there is only general discussion of what they might contain.                                                                                                      | A heavy vehicle management plan is not required<br>at this stage but will be developed in consultation<br>with the RTA prior to ILC operations commencing.<br>Traffic management measures have been<br>considered in consultation with the RTA and a<br>LATM plan will be prepared.                                                                                                            |  |
| • While a list of intersections requiring upgrade is provided, no preliminary designs or costs are provided, so the overall burden of state and local road authorities is not yet measurable. The timetable of the upgrades to match development of the ILC is not provided.                                                                 | Not required at this stage. The works proposed for<br>the Roberts rd/ Norfolk Rd intersection will be<br>developed during concept / detailed design in<br>consultation, with the RTA as required.                                                                                                                                                                                              |  |

| <ul> <li>There is no sensitivity testing of the truck<br/>generation rate and the forecast TED movements.<br/>The traffic volumes are given as absolutes, so risks<br/>and ranges are not assessable.</li> </ul>                                                                                | Sensitivity testing was undertaken and is discussed in Appendix B of the EA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |

| <ul> <li>The NETANAL model used in the EA is suspect in that:</li> </ul>                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| <ul> <li>source and method of base 2005 trip table<br/>development done separately for cars and trucks</li> </ul>                                                                                                                                                                               | The 2005 base trip table has been calibrated for<br>observed volumes at some 15 key locations in the<br>Enfield area, identified in the report, but not cited<br>by PB. The trip table from which the base table<br>was calibrated has evolved from previous<br>projects, where calibration has also been<br>undertaken.                                                                                                                                                                                                                                                   |  |
| > NETANAL 2005 demand should be verified by<br>interpolating demand between 2001 Census and<br>2006 forecast. Census Journey to work data (JTW)<br>in conjunction to TPDC trip table should provide a<br>reasonable basis for estimating 2005 base year<br>demand.                              | The base matrix (2005) has been calibrated for<br>observed volumes in the Enfield area. Previous<br>to use on this project, the matrix had been<br>calibrated for various projects around the Sydney<br>metropolitan area. The degree of matching<br>between observed and modelled flows is shown<br>in Appendix A of the Traffic Report (Appendix B of<br>the EA).                                                                                                                                                                                                        |  |
| > traffic count data did not capture regional travel<br>demand which is a critical issue for the ILC. RTA has<br>defined 16 screenlines across the overall Sydney<br>network. Part of RTA screenlines 1, 5 and 11 would<br>intercept ILC traffic on the wider area network (see<br>Figure 2.1). | The counts collected for this project do include<br>regional (as well as local) traffic that use the road<br>network in the vicinity of the ILC. In the context of<br>the study, the model is not being used to forecast<br>traffic diversion due to a new link or other network<br>issue. The impact of the ILC is confined to a<br>relatively small area (see Figure 2.2 of the EA<br>Appendix B, which was discussed with the RTA at<br>the commencement of the study). It is appropriate<br>to concentrate on the sub-regional level rather<br>than the wider network, |  |
| <ul> <li>Table 2.1 identified criteria where NETANAL<br/>model requires additional calibration.</li> </ul>                                                                                                                                                                                      | The cited additional calibration measures are only<br>relevant to a regional model assessing wider<br>implications of network change (eg a new link or<br>road closure). The impact of the ILC is limited to<br>the sub-regional level, and the adopted calibration<br>process is appropriate.                                                                                                                                                                                                                                                                             |  |
| > documentation of the population and employment<br>growth between 2005 and 2016 for inner and middle<br>western catchments, predominantly the LGAs of<br>Auburn, Bankstown, Parramatta, Fairfield, Holroyd,<br>Blacktown, Liverpool, Ryde, Concord and                                         | SKM used trips matrices for future trips relevant to 2016. The 2016 matrices have been used reliably by SKM for several years to forecast future traffic growth. Specific and significant changes were added to the matrices to reflect Port Botany                                                                                                                                                                                                                                                                                                                        |  |

| Strathfield, is missing.                                                                                                                                                                                                                                                                                                                                            | expansion and Sydney Airport forecast growth (as documented).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |

| > source and method of estimating future 2016 car<br>and truck trip tables used to estimate<br>background traffic growth has not been documented.                                                                                                                                                                                                                   | Car and truck estimates for 2016 were derived<br>from the base 2016 trip matrices, adjusted by the<br>calibration factors derived in the model validation.                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| > lack of documentation on traffic assignment<br>technique and conversion PCU (passenger car unit)<br>factors for various truck categories.                                                                                                                                                                                                                         | The truck matrix in NETANAL is used to estimate<br>the effect of heavy vehicles on link and<br>intersection capacity. It is not used on a<br>stand-alone basis. The proportion of heavy<br>vehicles in the traffic stream is one of the inputs to<br>the INTANAL intersection models.<br>The PCU factors are documented in the working<br>paper. The INTANAL default pcu factor of 2 for<br>heavy vehicles was not modified for this project.<br>Subsequent analysis indicated that based on<br>peak hour and daily traffic forecasts, the PCU<br>factor of 2 is correct for this assessment. |  |
| The EA did not present turning paths at affected<br>intersections, and severe potential problems are<br>shown in Section 3 which raise questions about road<br>safety and future road efficiency.                                                                                                                                                                   | Swept path analyses were undertaken<br>subsequent to the submission of the EA. In<br>addition, Council and the RTA has previously<br>(June 2005) undertaken tests with 25m B-doubles<br>at Roberts Road / Norfolk Road. The testing<br>indicated problems with the left turn into Norfolk<br>Road. SPC expects this left turn will need to be<br>re-configured. Council indicated no problems with<br>other movements at this intersection.                                                                                                                                                   |  |
| Perhaps most significantly, the EA dismissed without<br>sufficient investigation an access scenario where all<br>ILC traffic would travel to and from the site by<br>Liverpool Rd via Cosgrove Road, operating<br>Cosgrove Road and Gould Street intersections with<br>Liverpool Road as paired intersections.                                                      | Alternative access points have been previously<br>considered by SPC. This analysis indicated that<br>the Roberts Road / Norfolk Road and Cosgrove<br>Road / Hume Highway intersection are the<br>preferred access options. See previous<br>responses above.                                                                                                                                                                                                                                                                                                                                   |  |
| The above scheme would have limited impact on the operation of other nearby Liverpool Road intersections including Centenary Drive/Roberts Road intersection with Liverpool Road, based on PB's independent simulation modelling using future volumes documented in the EA. The above scheme would eliminate the need for an additional access to form Roberts Road | Channelling 100% of traffic through Cosgrove<br>Road intersection would add further pressure to<br>the Hume Highway / Centenary Drive<br>intersection, as a large proportion of ILC trucks<br>would use Centenary Drive. Only allowing access<br>via Cosgrove Road would take traffic off the<br>Centenary Drive / Roberts Road overpass and<br>direct it through the at-grade intersection instead                                                                                                                                                                                           |  |
| This would encourage ILC traffic to remain on the                                                                                                                                                                                                                                                                                                                   | Heavy vehicles will still use Roberts Road /                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |

| this particular facility would fit within the wider  | being constructed.                                     |  |  |
| network of facilities proposed for the metropolita   | n                                                      |  |  |

| area, nor has it considered the traffic impact from<br>this facility, if other parts of the intermodal facility<br>network were not implemented. Greater sensitivity<br>testing seems warranted.                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| For whatever reason, if one or more facilities from<br>the overall network do not proceed, the<br>underlying assumption of an annual demand for<br>300,000 TEU could be significantly inaccurate. The<br>ILC might represent a larger portion of the freight<br>task, so there would be an<br>increase in the forecast throughput, which in turn<br>would result in an increase in the level of<br>traffic generated by ILC and therefore more traffic<br>impacts.                                 | The Enfield ILC is designed for a throughput of 300,000 TEU per annum and is sited in a location adjacent to its market catchment area.                                                                                                                                                                                                                                                                                                                                                                       |  |
| Further, the truck movements generated from the<br>site was estimated from the assumed rail<br>container throughput of 300,000 TEU's per year. All<br>the assumptions regarding truck<br>movements, levels, frequencies etc are derived from<br>this one number. A variation in rail<br>throughput would alter the forecasted levels of truck<br>movements most likely to increase<br>them.                                                                                                        | Enfield ILC is designed for a throughput of 300,000 TEU per annum and the traffic impact assessment was based on this figure.                                                                                                                                                                                                                                                                                                                                                                                 |  |
| <ul> <li>With such poor levels of road performance and no program of road capacity improvements to put into the report, there are two implications:</li> <li>Travel behaviour is not really being described, because congestion interrupts the bases for assigning traffic to routes.</li> </ul>                                                                                                                                                                                                   | The NETANAL model assignment takes levels of congestion into account.                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| • Once improvements are made, as inevitably they must if the background traffic grows in line with the forecast growth, quite different traffic impacts could result.                                                                                                                                                                                                                                                                                                                              | Noted. The traffic volumes generated by the ILC development contribute less than 1% to adjacent arterial road network.                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 2.2.5 <u>Unstable road capacity</u><br>The EA did not assess a scenario where all ILC<br>traffic would access the site from Liverpool<br>Rd via Cosgrove Road, and the Cosgrove Road and<br>Gould Street intersections with<br>Liverpool Road would operated as paired<br>intersections. Under this access arrangement,<br>there would be limited impact to the operation of<br>other nearby Liverpool Road intersections<br>(see Section 4). This option would provide the<br>following benefits: | The analysis of the one-way pair option indicates<br>that while satisfactory operation of the 2 linked<br>intersections (Gould Street and Cosgrove Road)<br>would be achieved in the short term, with<br>background growth the 2-lane eastbound<br>constraint on the Hume Highway would result in<br>unsatisfactory performance in the future without<br>the ILC. Even with 3-lanes provided eastbound,<br>the Cosgrove Road intersection would be at LoS<br>E with 100% of ILC traffic using it. This is the |  |
|   |                                                                      | same result as documented in the EA for 100% of      |  |
|---|----------------------------------------------------------------------|------------------------------------------------------|--|
|   |                                                                      | ILC traffic using the Cosgrove Road intersection.    |  |
|   |                                                                      | Therefore it is not feasible to channel all ILC      |  |
|   |                                                                      | vehicles through this intersection.                  |  |
|   |                                                                      | Furthermore, it would add further pressure to the    |  |
|   |                                                                      | Hume Highway / Centenary Drive intersection, as      |  |
|   |                                                                      | a large proportion of ILC trucks would use           |  |
|   |                                                                      | Centenary Drive. Only allowing access via            |  |
|   |                                                                      | Cosgrove Road would take traffic off the             |  |
|   |                                                                      | Centenary Drive / Roberts Road overpass and          |  |
|   |                                                                      | direct it through the at-grade intersection instead. |  |
|   |                                                                      |                                                      |  |
|   | 2.2.6 <u>Cosgrove Road traffic growth</u>                            |                                                      |  |
|   | It is concluded that the Enfield facility will not                   | Agreed that not all growth in Cosgrove Road          |  |
|   | significantly cause a growth in traffic levels in                    | would be from natural growth, and that the ILC       |  |
|   | the locality. The discussion does not acknowledge                    | would contribute a small proportion of this traffic. |  |
|   | that Cosgrove Road is set to experience a large                      |                                                      |  |
|   | growth in traffic volume - a good proportion of this                 |                                                      |  |
|   | growth will be cars to and from the ILC. Thus the                    |                                                      |  |
|   | growth in traffic on Cosgrove Road is not only                       |                                                      |  |
|   | attributable to natural traffic growth, but also from the            |                                                      |  |
|   | ILC.                                                                 | A more detailed assessment of options was            |  |

|   | The EA did not assess a scenario where all ILC                       | See previous response to comments                    |  |
|   | traffic would access the site from Liverpool Rd via                  |                                                      |  |
|   | Cosgrove Road, and the Cosgrove Road and Gould                       |                                                      |  |
|   | Street intersections with Liverpool Road would                       |                                                      |  |
|   | operated as paired intersections. Under this access                  |                                                      |  |
|   | arrangement, there would be limited impact to the                    |                                                      |  |
|   | operation of other nearby Liverpool Road                             |                                                      |  |
|   | intersections (see Section 4). This option would                     |                                                      |  |
|   | provide the following benefits:                                      |                                                      |  |
| 1 | <ul> <li>eliminate the need for an additional access from</li> </ul> |                                                      |  |

| <ul> <li>Roberts Road</li> <li>encourage ILC traffic to stay on the state highway network, less opportunity for ILC traffic to intrude into local residential streets</li> <li>eliminate the additional cost associated with the construction of the overbridge, and</li> <li>upgrading of Roberts Road intersections not required.</li> <li>Based on pur analysis results, this access option is feasible under existing and future traffic conditions.</li> <li><b>3</b> NETANAL traffic model review</li> <li>PB undertook a preliminary review of the NETANAL traffic model that formed the basis of traffic forecasts for key regional and local roads surrounding the ILC site. This traffic model review process was based on information and data presented in Chapter 7 of Volume 1 and Appendix B of Volume 2 of the EA. This review does not extend to the forecasting process used by the SKM, nor does it provide advice regarding modelling assumptions, parameters adopted to produce NETANAL traffic forecasts. There was not sufficient information in the report for PB to do this.</li> </ul>               | Parsons B did not have access to the NETANAL model and therefore this statement is incorrect.                                                                                                                                                                                                                                        |  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 2.3.1 <u>Model Network Coverage</u><br>In general, NETANAL model's geographic coverage<br>is the entire Sydney Metropolitan area. has been<br>focussed on a local area covered by the Hume<br>Highway, Coronation Parade, Punchbowl Road,<br>Boronia Road/ Juno Parade and Centenary Drive.<br>While this network coverage is ideally suited for local<br>traffic issues, however, regional freight/truck<br>movements extend to an area beyond this local area<br>boundary. The EA stated "the bulk of container<br>movement to and from Enfield is expected to be in<br>area immediately west of Enfield. The local<br>government areas of Bankstown and Parramatta<br>account for the largest proportion of activity" (section<br>4.2.5). To investigate the impact of this reported<br>regional traffic movement, the model area needed to<br>be extended to a wider network incorporating portals<br>to the M4 and M5 motorways. This wider network<br>would have the potential not only to capture regional<br>travel demand, but also to demonstrate model<br>robustness on forecasting regional background<br>traffic. | The focus on the sub-regional area is justified<br>given the localised impact that the ILC would<br>have.<br>The approach suggested by PB would be<br>appropriate for a corridor modelling study or<br>investigation of a new road link, but is not<br>considered necessary for this study which is<br>concerned with local impacts. |  |

| 2.3.2 Model time period<br>The traffic report did not specifically state the time                                                                     | The assessment period was based on the peak                                                                                                         |  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|--|
| ILC morning truck peak activity would occur betwee<br>7 am and 8 am and evening peak would occur                                                      | One hour is the standard modelling time frame<br>and standard industry practice in traffic                                                          |  |
| between 5 and 6 evening, these have been assume<br>as the periods for which the model reports . While                                                 | d engineering.                                                                                                                                      |  |
| this may be the peak characteristic for ILC truck movements, regional traffic data suggest that                                                       |                                                                                                                                                     |  |
| Sydney's road network has longer peak periods that a conventional one hour. Ideally, peak period for                                                  |                                                                                                                                                     |  |
| 7:00 to 9:00 am, and evening between 3:00 to 6:00                                                                                                     |                                                                                                                                                     |  |
| by the Department of Planning's Transport &<br>Population Data Centre (TPDC) Strategic Travel                                                         |                                                                                                                                                     |  |

The method of deriving the NETANAL base 2005 trip matrix (travel demand) is                                                       | between observed and modelled flows is shown<br>in Appendix A of the Traffic Report (Appendix B of                                                  |  |
| unknown. This NETANAL 2005 demand should be verified by interpolating                                                                                 | the EA).                                                                                                                                            |  |
| demand between 2001 Census and 2006 forecast.<br>Census Journey to work data (JTW) in conjunction<br>with TPDC trip table comparisons might provide a |                                                                                                                                                     |  |
| reasonable basis for estimating 2005 base year demand.                                                                                                |                                                                                                                                                     |  |
| 2.3.4 ILC site traffic generation                                                                                                                     |                                                                                                                                                     |  |
| The ILC site's traffic generation was estimated on<br>the basis of annual volume of containers                                                        | Noted. The impacts of the traffic generated from                                                                                                    |  |
| importers/exporters. The report indicates some 1,160 daily truck movements, with 128                                                                  | report. Enfield ILC contributes to 1% of the overall traffic on the network, and would result in the                                                |  |
| B-doubles (about 11 per cent) are likely to be generated from the ILC. morning peak hour truck                                                        | proportion of heavy vehicles on Roberts Road<br>and the Hume Highway increasing by less than 1                                                      |  |
| movements are then estimated to be about 88, with<br>nine B-doubles. This allocation appears reasonable                                               | percentage point. As such it is not considered<br>, that "the increase of large vehicles, especially<br>B double significantly affects interpretion |  |

| process measured by regional<br>screenlines. Table 2.1 also identifies criteria where<br>the NETANAL model requires additional<br>calibration. It is granted that calibration standard<br>reported in Table 2.1 is a rigorous process,<br>nevertheless, the NETANAL regional model should<br>satisfy major screenlines calibration standard to<br>demonstrate robustness. Calibration criteria<br>documented in Table 2.1 demonstrated that ILC<br>model needed model validation in a number of<br>additional areas. Without such validation, model<br>forecasting results could create significant concern<br>on ILC traffic assessment.                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 2.3.7 Future car and freight demand forecast<br>Section 4.2 of the EA traffic report stated that 2016<br>base trip matrix was developed on the<br>basis of population and employment forecasts<br>provided by the DIPNR. The report did not show<br>potential population and employment growth<br>(between 2005 and 2016) for inner and<br>middle western catchments surrounding the site,<br>predominantly the LGAs of Auburn, Bankstown,<br>Parramatta, Fairfield, Holroyd, Blacktown, Liverpool,<br>Ryde, Concord and Strathfield. A table showing such<br>growth also can be used to verify background traffic<br>growth as reported in Tables 4.4 and 4.5 of the SKM | SKM used trips matrices for future trips relevant to<br>2016. The 2016 matrices have been used reliably<br>by SKM for several years to forecast future traffic<br>growth. Specific and significant changes were<br>added to the matrices to reflect Port Botany and<br>Sydney Airport (as documented).                                                                                                                                          |  |  |
| The report.<br>The report omitted which vehicle categories were<br>included in the NETANAL base year<br>commercial vehicle trip table, nor did it explain the<br>process applied for developing the future<br>Commercial vehicle trip table. This is particularly<br>important given the nature of ILC project, where<br>future truck demand would play a key role in<br>measuring road network performance.                                                                                                                                                                                                                                                              | trom the base 2016 trip matrices, adjusted by the<br>calibration factors derived in the model validation.<br>The truck matrix in NETANAL is used to estimate<br>the effect of heavy vehicles on link and<br>intersection capacity. It is not used on a<br>stand-alone basis. The proportion of heavy<br>vehicles in the traffic stream is one of the inputs to<br>the INTANAL intersection models.<br>See responses to specific comments above. |  |  |
| In conclusion, PB recommends additional model documentation that would identify data sources, basic assumptions and the development process of future car and truck trip table used.<br>2.3.8 Background traffic growth (between 2005 and 2016)<br>In general, peak hour traffic growth on all roads in the local study area is between 1.3% to 1.48%. The robustness of this growth should be verified with the                                                                                                                                                                                                                                                          | The cited growth rates are in line with expected and observed growth in the area.                                                                                                                                                                                                                                                                                                                                                               |  |  |

| population and employment growth for LGA's within Svdney's inner and middle western catchments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |  |  |  |

| The FARAL 2005 demand should be verified by interpolating demand between 2001<br>Census and 2006 forecast. Census Journey to work data (JTW) in conjunction to TPDC trip table should provide a reasonable basis for estimating 2005 base year demand.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |  |  |  |

| <ul> <li>lack of documentation on traffic assignment<br/>technique and conversion PCU (passenger<br/>car unit) factors for various truck categories<br/>The traffic model used to analyse traffic assessment<br/>included in the EAR raised a number of matters of<br/>concern. These concerns include the assumptions<br/>behind the modelling, the scope of the modelling, the<br/>modelling methodology, the assessment parameters<br/>as well as the conclusions drawn from the<br/>assessment.</li> <li>Some of these identified deficiencies may on their<br/>own be of minor significance. However, when<br/>considered cumulatively they indicate that it is just<br/>not possible to have confidence about the findings of<br/>the traffic assessment. Given the importance of<br/>traffic as an issue for this proposal, this is a matter of<br/>significant concern.</li> </ul> | See responses to specific comments above<br>The traffic impact assessment undertaken for the<br>ILC was considered to be appropriate.                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 3. Intersection impacts<br>3.1 Large vehicles at critical intersections<br>The traffic assessment in the EA did not undertake<br>swept path analyses for large vehicles such as<br>semi-trailers and B-double vehicles at critical<br>intersections. This is a major<br>deficiency in the traffic assessment, in particular,<br>when our analysis results demonstrate that<br>semi-trailer and B-double vehicles would have<br>difficulty negotiating some turning movements and in<br>some cases it is physically impossible to make the<br>turn at both the Roberts Road- Norfolk Road and<br>Cosgrove Road-Liverpool Road intersections. This<br>problem is greater at the Roberts Road-Norfolk<br>Road intersection due to small turning radii at this<br>intersection.                                                                                                                | Swept path analyses were undertaken<br>subsequent to the submission of the EA to<br>determine possible traffic management measures<br>for the Roberts Rd/Norfolk Rd intersection. In<br>addition, Council and the RTA has previously<br>(June 2005) undertaken tests with 25m B-doubles<br>at Roberts Road / Norfolk Road. The testing<br>indicated problems with the left turn into Norfolk<br>Road. SPC expects this left turn will need to be<br>re-configured. Council indicated no problems with<br>other movements at this intersection. |  |

| Council identified three intersections where future    |                                              |  |
|--------------------------------------------------------|----------------------------------------------|--|
| freight traffic was of particular concern              |                                              |  |

| 4.2 Alternative Liverpool Road access<br>PB submits, as an alternative to the EA proposed<br>access arrangement, for the primary<br>access to the ILC to be via Cosgrove Road and<br>Gould Street. Under this proposal, Cosgrove Road<br>and Gould Street would operate as one-way link<br>pair, where the traffic along Gould<br>Street would flow in the northbound direction and<br>Cosgrove Road would only allow southbound traffic.<br>Both intersections with Liverpool Road would<br>operate under paired and coordinated signal control. | Noted. See response above.                                                                                                                                                                                                                |  |
| The EA proposed access via Norfolk Road would not<br>be required under the PB proposal, therefore, the<br>overbridge across the marshalling yard would also<br>not be required.                                                                                                                                                                                                                                                                                                                                                                   | The western access and bridge is required for operational efficiency and OHS requirements.                                                                                                                                                |  |
| The southern section of Cosgrove Road, where it<br>intersects with Punchbowl Road, could be provided<br>as an emergency access only                                                                                                                                                                                                                                                                                                                                                                                                               | This intersection could be used in case of an<br>emergency. During operation of the site, ILC<br>traffic will be prohibited from using this<br>intersection to access the site. This will be<br>enforced via traffic management measures. |  |
| 4.2.1 Intersection performance - future base<br>case                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                           |  |
| Under anticipated future traffic conditions (without<br>ILC development) the three major intersections<br>within the coverage area of the simulation model<br>would operate with LoS D or better in either peak<br>period. At these intersections, generally both peak<br>periods have similar operating conditions except at<br>Cosgrove Road where the morning peak period has<br>lower delays than the evening peak period. During<br>the evening peak period, these intersections would<br>operate at near capacity.                          | The intersections referred to were not listed.                                                                                                                                                                                            |  |
| SUMMARY and recommendations<br>5.1.1 Confident in the EA<br>There is a lack of confident in the EA due to a<br>number of identified deficiencies in the traffic<br>assessment and modelling undertaken in the EA.                                                                                                                                                                                                                                                                                                                                 | See previous comments on specific issues raised by Parsons B.                                                                                                                                                                             |  |
| • The underlying assumption for container activity<br>of 300,000 twenty-foot equivalent units<br>(TEU) was used to generate traffic from the<br>proposed development. But it did not assess                                                                                                                                                                                                                                                                                                                                                       | The ILC is designed for a throughput of 300,000 TEU per annum .                                                                                                                                                                           |  |

| <ul> <li>the traffic impact as a direct result of the change in the assumed throughput of 300,000</li> <li>TEU due to other part of the future network of the intermodal facilities not proceeding or a variation in the rail throughput.</li> <li>The EA did not investigate fully the opportunity to have Cosgrove Road (with Gould Street) as the primary access into the site. Our analysis results indicate that this is a feasible solution under both the existing and future conditions. This option does not require upgrade to other intersections which would be required under the EA proposed access arrangement e.g. Roberts Road-Norfolk Road intersection.</li> </ul> | This was assessed subsequent to the submission<br>of the EA and has been addressed as specific<br>response to comments above.                                                                                                                                                                                                                                       |  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| • The EA traffic models for the morning and<br>evening peak periods cover the one-hour time<br>period within each of these peak periods however<br>Sydney road network h as longer commuter peak<br>periods - ideally the morning model should have<br>two-hour peak period<br>from 7:00am to 9:00am while the evening peak<br>periods should have three-hour peak<br>period from 3:00pm to 6:00pm.                                                                                                                                                                                                                                                                                   | The assessment period was based on the peak<br>hour on the road network.<br>One hour is the standard modelling time frame<br>and standard industry practice in traffic<br>engineering.                                                                                                                                                                              |  |
| The EA traffic model output was not bench<br>marked against Transport & Population Data<br>Centre's Metropolitan Strategic Travel Model.     It is<br>unknown how's the existing base year trip matrix<br>was derived.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | The base matrix (2005) has been calibrated for<br>observed volumes in the Enfield area. Previous<br>to use on this project, the matrix had been<br>calibrated for various projects around the Sydney<br>metropolitan area. The degree of matching<br>between observed and modelled flows is shown<br>in Appendix A of the Traffic Report (Appendix B of<br>the EA). |  |
| • The EA traffic model does not appear to have captured the effects of regional traffic surrounding the ILC site as the models were calibrated using counts undertaken within the immediate vicinity of the site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The focus on the sub-regional area is justified<br>given the localised impact that the ILC would<br>have. The approach suggested by PB would be<br>appropriate for a corridor modelling study or<br>investigation of a new road link, but is not<br>considered necessary for this study which is<br>concerned with local impacts.                                   |  |
| The use of RTA screenlines would help this regard.<br>The EA traffic model has not meet major screenlines<br>calibration standards resulting in less robust<br>modelling results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | This level of detail is not considered necessary for assessing the local area impacts.                                                                                                                                                                                                                                                                              |  |

| <ul> <li>The EA indicated that the 2016 base trip matrix<br/>was developed using population and employment<br/>forecasts provided by DIPNR, but has not shown the<br/>changes between 2005 and 2016.</li> </ul>                                                                                                                                                                                                                                                                                                      | SKM used trips matrices for future trips relevant to 2016. The 2016 matrices have been used reliably by SKM for several years to forecast future traffic growth. Specific and significant changes were added to the matrices to reflect Port Botany and Sydney Airport (as documented).                                                                                                                                                                                                                                                                                             |  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| • The EA did not indicate which vehicle categories<br>were included in the traffic models commercial<br>vehicle trip table nor did it explain the process<br>applied for developing the future commercial trip<br>table.                                                                                                                                                                                                                                                                                             | Car and truck estimates for 2016 were derived<br>from the base 2016 trip matrices, adjusted by the<br>calibration factors derived in the model validation.<br>The truck matrix in NETANAL is used to estimate<br>the effect of heavy vehicles on link and<br>intersection capacity. It is not used on a<br>stand-alone basis. The proportion of heavy<br>vehicles in the traffic stream is one of the inputs to<br>the INTANAL intersection models.                                                                                                                                 |  |
| • It is also unclear of the traffic assignment<br>technique used and how commercial vehicles were<br>converted into equivalent passenger car unit.                                                                                                                                                                                                                                                                                                                                                                   | The truck matrix in NETANAL is used to estimate<br>the effect of heavy vehicles on link and<br>intersection capacity. It is not used on a<br>stand-alone basis. The proportion of heavy<br>vehicles in the traffic stream is one of the inputs to<br>the INTANAL intersection models.<br>The PCU factors are documented in the working<br>paper. The INTANAL default pcu factor of 2 for<br>heavy vehicles was not modified for this project.<br>This is an appropriate average value given the<br>mix of traffic from the ILC both during peak times<br>and over the whole of day. |  |
| 5.1.2 <u>Adequacy of intersections</u><br>The EA recommended for a number of intersections<br>to be upgraded as a result of growth in the<br>background traffic and traffic from the ILC, but did<br>not indicate what type of grade are required rather<br>than three through lanes a t the Cosgrove Rd-<br>Liverpool Rd intersection.                                                                                                                                                                              | The traffic assessment suggest some intersections will have diminished performance in the future. This is a wider network issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| The EA traffic assessment did not undertake swept<br>path analyses for large vehicles to determine the<br>adequacy of geometric clearance at critical<br>intersections. Our analysis indicate that some<br>turning movements undertaken by semi-trailers<br>and/or B-double vehicles are either physically<br>impossible or would require the vehicle to occupy the<br>adjacent lane to negotiate the turn. The intersections<br>with this issue are Roberts Road-<br>Norfolk Road and Cosgrove Road-Liverpool Road. | See responses to previous comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |

| 5.1.3 Alternative access arrangement<br>Cosgrove Road together with Gould Street operation<br>as a paired and coordinated signalised intersection<br>with Liverpool Road would be a technically feasible<br>option to provide access to serve the ILC<br>development. PB's simulation results demonstrate<br>that under this proposed arrangement, all<br>intersections would operate with satisfactory<br>conditions with spare capacity in both the future<br>base case (without II C) and future development                                                                                                                                                                                                                                                                                                                                                                                                                                                             | g See responses to previous comments                                                                                                                                                                                             |  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| case (with ILC). The proposed change at Cosgrove<br>Road and Gould Street would have limited impact i<br>the Centenary Drive and Roberts Road intersection<br>with Liverpool Road.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0<br>S                                                                                                                                                                                                                           |  |
| It is recommended that a number of key<br>intersections surrounding the proposed ILC site be<br>upgraded in order to improve intersection<br>operational capacity and to permit large vehicles to<br>negotiate some turning movements. These<br>intersections include:<br>King Georges Road and Punchbowl Road<br>Liverpool Road and Centenary Drive<br>Roberts Road and Norfolk Road<br>Roberts Road and Juno Parade and<br>Liverpool Road and Cosgrove Road.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | See responses to previous comments regarding<br>physical turning movements at intersections. No<br>analysis was presented on turning movements at<br>King Georges road / Punchbowl Road and<br>Liverpool Road / Centenary Drive. |  |
| <ul> <li>However, if the access to Roberts Road is not provided, then intersection upgrades at Roberts Road intersections would not be required due to th ILC. It is also recommended that the access point be provided via Cosgrove Road/Gould Street at Liverpool Road. Our analysis results demonstrate that with Cosgrove Road and Gould Street operatin as a paired intersection with Liverpool Road and as one-way link pair would have limited impact to othe nearby Liverpool Road intersections under existing and future traffic conditions. This access option would have benefits such as:</li> <li>eliminate the need for an additional access from Roberts Road encourage ILC traffic to stay on the state highway network, less opportunity for ILC traffic to intrude into local residential streets eliminate the additional cost associated with the construction of the overbridge, and upgrading of Roberts Road intersections not required.</li> </ul> | See response to previous comments regarding<br>access options and analysis of the two-way pair.                                                                                                                                  |  |

| Air Quality       | When considering a development application it is important to examine both the incremental increases in pollutant exposure as well as the resultant level of total air pollution exposure. Compliance with a criterion of 50µg/m <sup>3</sup> is not necessarily health protective.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The air quality assessment does consider both the incremental increases in pollutant exposure and total pollutant exposure. Specific to PM10 for the construction and operational phases and NO <sub>x</sub> /NO <sub>2</sub> for the operational phase, the assessment models 1 hour impacts using contemporaneous background air quality and meteorological data as per DEC's Approved Methods. With respect to PM <sub>10</sub> the cumulative assessment compares 24 hour impacts with the relevant criteria of $50\mu g/m^3$ .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 833               | NSW HEALTH<br>Submission No 318 |
|                   | Further, the proponent has incorrectly adopted National<br>Environmental Protection Measure goals in allowing exceedances<br>for PM10 page 12.2 (Table 12.1) of the assessment report. The<br>NEPM goals relate to achievement of standards across an airshed<br>and are not intended for application to project specific or point<br>source pollution. DEC criteria do not allow exceedances if these<br>standards are adopted to assess project specific pollution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | For the PM10 air quality assessment (both construction and operational) we do use the NEPM criteria of 50 ug/m <sup>3</sup> (24 hour) with 5 exceedances allowed rather than the DEC criteria of 50 ug/m <sup>3</sup> with no exceedances allowed. The reason for this is that the DEC criteria are considered too stringent for assessment of construction phase PM10. As a demonstration of this the background air quality data for Lidcombe which was used for modelling purposes and is shown in Appendix F of this report, provides highest background PM10 (24 hour) approaching 40 ug/m <sup>3</sup> . In modelling PM10 impacts it can be seen that an impact from construction greater than 10 ug/m <sup>3</sup> could result in a single exceedance of this criteria. An allowance of 5 exceedances per year is considered more reasonable and workable, particularly in light of the fact that in many other jurisdictions eg. US and Qld (within Australia) far less stringent criteria are applied, eg. 150 ug/m <sup>3</sup> .                                                                                                                 |                   |                                 |
|                   | The modelling assumptions (pages 12.9 - 12.12) do not appear to follow DEC guidelines. The restriction of data to only when wind speed is less than 5m/s (and possibly also restricted to wind direction not including 210degrees to 340degrees) rather than modelling all weather conditions needs to be further justified. The predicted construction air quality impacts thus reflect average background air quality with the addition of construction-generated pollutants under conditions of wind speed less than 5m/s and possibly only from NNW to SW. This demonstrates significant exposure to PM10 of up to 70ug/m3 over 24-hours in residential areas, which represents more than a doubling of the current maximum exposure. Increased exposure to PM10 of this magnitude may increase the risk of health effects such as asthma, exacerbation of chronic obstructive pulmonary diseases, and irritation of the eyes and upper airways within the surrounding local community. However if all weather conditions were taken into account, predicted increments and associated health impacts may be higher. | The PM <sub>10</sub> modelling methodology for construction phase impacts is considered reasonable, whereby initially the modelling was undertaken with no dust controls measures in place, and as expected impacts showed exceedance of the relevant criteria. Various dust control measures were progressively implemented until a level of control was achieved that showed impacts could be effectively managed. These controls included sealing of some surfaces that would be otherwise left unsealed, high level watering of the site and wind speed and wind direction restrictions, which may be required, however, not necessarily. In reality dust impacts will be managed by the physical controls assumed in the modelling and a sophisticated real-time PM <sub>10</sub> monitoring program which will advise site operators of any dust impacts within sensitive receiver locations should these occur. The site operator can then (almost immediately) alter construction works which may include restriction of works in certain wind conditions such that impacts are effectively manager, without any exceedance of the relevant criteria. |                   |                                 |

| Issue<br>Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Stakeholder<br>ID | Name |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|------|
|                   | air impacts. The proponent's suggested approach has the potential<br>to allow impacts to occur before specific measures have been<br>developed and implemented, increasing the likelihood of health<br>effects on and irritation within the local community. The<br>development of the Dust Management Plan should include all<br>possibilities including the stopping of construction until a solution<br>has been obtained, should off-site air impacts be significant.                                                                                                          | 50 ug/m <sup>3</sup> (24 hour) is a very stringent criteria and generally as $PM_{10}$ levels approach the criteria value there would be not perceived deterioration in air quality that would enable an operator to pro-actively implement controls to mitigate impact. It is noted, however, that the $PM_{10}$ criteria is a 24 hour criteria and site operators will have instant access to real-time $PM_{10}$ data under the monitoring program proposed. As such as instantaneous $PM_{10}$ levels reach some pre-determined threshold value, control measures can be implemented such that total $PM_{10}$ impacts within the 24 hour period can be mitigated such that the criteria is achieved. |                   |      |
|                   | In NSW Health's Director-General's requirements we requested that incremental exposure to PM2.5 also be assessed, as this is a better indicator of exposure to vehicle emissions than PM10 and this has not been undertaken. However NO2 is also a reasonable indicator of exposure to vehicle emissions and this has been modelled, and is probably an adequate indicator of operational phase air quality health impacts.                                                                                                                                                        | It seems from this comment that NSW Health is comfortable with the assessment of $NO_2$ in place of $PM_{2.5}$ for the operational phase of the project. For the construction phase it is unclear whether a $PM_{2.5}$ assessment is expected, however, as the majority of impact from the construction phase will be via the potential release of fugitive particles (dust), the assessment of $PM_{10}$ , TSP and dust deposition are considered adequate for this purpose.                                                                                                                                                                                                                             |                   |      |
|                   | It is important to reduce these operational air quality impacts as they<br>are ongoing, potentially more toxic than construction phase impacts<br>(being comprised principally of diesel emissions), and also as<br>sensitive sites such as Strathfield Girls High and St Anne's Primary<br>are located within some of the areas expected to have substantially<br>increased exposure.                                                                                                                                                                                             | The EA provides a framework for the management of operational<br>phase air quality impacts. This will be further developed within<br>Operational Environmental Management Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                   |      |
|                   | Road Traffic Air Quality Impacts<br>The proponent has modelled road traffic air quality impacts in<br>isolation and the levels estimated indicate relatively small<br>incremental increases in PM10 & NO2 . However, as noted in the<br>introduction, we have concerns that the EA underestimates the<br>traffic impact on local roads, which may have the effect of<br>underestimating the local pollutant impacts.                                                                                                                                                               | The assessment of road traffic air quality impacts was based on traffic modelling for the project which was outlined in Chapter 7 of the EA. We believe it accurately reflects the traffic air quality impacts which will be very minor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                   |      |
|                   | To fully consider the operational phase exposure to air pollutants<br>the local road pollutant impacts should be added to on-site<br>operation impacts and considered as part of an assessment of<br>cumulative impacts.                                                                                                                                                                                                                                                                                                                                                           | The road traffic modelling uses a different assessment technique<br>and model to the modelling of on-site impacts, and such it is not<br>straight forward to consider the cumulative effect of these sources in<br>any quantitative way. It is noted, however, that the incremental<br>change in impact associated with changing vehicle numbers on the<br>local road network is very small, and as such the cumulative effect of<br>on-site emissions and those associated with changing vehicle<br>numbers on the local road network would not be significant.                                                                                                                                          |                   |      |
|                   | Cumulative Impacts<br>We note that the estimates of increased operational phase<br>exposure to air pollutants has not included emissions from<br>increased truck movements on local roads or from increased train<br>movements. Thus the increment in community exposure to air<br>pollutants is likely to be higher than reflected in the EA estimates,<br>particularly in the north-west of the site (additional road emissions)<br>and south-east of the site (additional train emissions). This should<br>provide further impetus to reducing on-site air pollution emissions. | Refer to response above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                   |      |

| Air Quality       | For operation of the project, the DEC's principal concerns are noise impacts and air quality issues.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 825               | DEC<br>Submission No 309 |
|                   | The assessment of air quality needs additional work in order for<br>impacts of the proposal to be fully characterised. As it stands, the<br>assessment predicts impacts will occur but indicates that with<br>appropriate mitigation the proposal could proceed without impact.<br>However, it is not clearly shown that there would not be impacts.<br>Importantly, it appears that the wrong impact assessment criteria<br>for PM10 has been used throughout the air quality assessment.                                                                                                                                                                                                           | For the PM10 air quality assessment (both construction and operational) we do use the NEPM criteria of 50 ug/m <sup>3</sup> (24 hour) with 5 exceedances allowed rather than the DEC criteria of 50 ug/m <sup>3</sup> with no exceedances allowed. The reason for this is that the DEC criteria is considered too stringent for assessment of construction phase PM10. As a demonstration of this the background air quality data for Lidcombe which was used for modelling purposes and is shown in Appendix E of the PPR to provide highest background PM10 (24 hour) approaching 40 ug/m <sup>3</sup> . In modelling PM10 impacts it can be seen that an impact from construction greater than 10 ug/m <sup>3</sup> could result in a single exceedance of this criteria. An allowance of 5 exceedances per year is considered more reasonable and workable, particularly in light of there fact that in many other jurisdictions eg. US and Qld (with Australia) far less stringent criteria is applied, eg. 150 ug/m <sup>3</sup> . |                   |                          |
|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | that there are two exceedances of the 50 ug/m <sup>3</sup> criteria, this should<br>be interpreted as within the five allowable exceedances not a further<br>two exceedances over and above the five allowed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                   |                          |
|                   | A good mitigation strategy appears necessary to prevent impacts<br>from both construction and operation activities. Thus the DEC<br>recommends that a revised air quality impact assessment that<br>demonstrates compliance to appropriate criteria should be<br>developed in parallel (or iteratively) with:                                                                                                                                                                                                                                                                                                                                                                                        | Detailed Construction and Operational phase management plans<br>would be prepared. The Construction EMP will include a Dust<br>Management Plan to be implemented during construction and will<br>include the identification of a detailed construction methodology,<br>modelling of dust emissions during that construction with the<br>development and implementation of further mitigation measures to<br>ensure the DEC defined criteria are met.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                   |                          |
|                   | <ul> <li>All technical issues (including impacts from off site activities) should be addressed through additional assessment work.</li> <li>However, the DEC considers that further assessment work is required to develop a final suite of mitigative actions that will ensure that appropriate air quality outcomes are achieved during the construction phase. Importantly, predictions of 1 to 27 days annually in excess of 24-hour PM10 criteria (with and without mitigation in place) require refined modelling approaches, greater refinement of modelling assumptions or a revision of operation and construction plans or a revision of the mitigation strategy, or all these.</li> </ul> | Potential exceedances of dust criteria will be managed by various means, including the physical controls assumed in the modelling and a sophisticated real-time $PM_{10}$ monitoring program which will advise site operators of any dust impacts within sensitive receiver locations should these occur. The site operator can then (almost immediately) alter construction works which may include restriction of works in certain wind conditions such that impacts are effectively managed, without any exceedance of the relevant criteria. A protocol will be devised to determine the appropriate response to readings greater than 50 ug/m3.                                                                                                                                                                                                                                                                                                                                                                                     |                   |                          |
|                   | <ul> <li>The DEC considers that further assessment work is required to address the following concerns:</li> <li>The AQIA has adopted an incorrect impact assessment criterion for 24-hour average PM10 emissions, based on NEPM reporting criteria. The correct assessment criterion does not allow 5 days annually in excess of the criteria. Adoption of the incorrect assessment criteria has a</li> </ul>                                                                                                                                                                                                                                                                                        | For the PM10 air quality assessment (both construction and operational) we do use the NEPM criteria of 50 ug/m <sup>3</sup> (24 hour) with 5 exceedances allowed rather than the DEC criteria of 50 ug/m <sup>3</sup> with no exceedances allowed. The reason for this is that the DEC criteria is considered too stringent for assessment of construction phase PM10. As a demonstration of this the background air quality data for                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                   |                          |

| Issue<br>Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Stakeholder<br>ID | Name |

|                   | number of implications, including that additional<br>mitigation may be required to avoid impacts. Clarification<br>is also required regarding the impacts for stage 1 and 2 of<br>construction and for impacts from off site activities<br>because it is possible that 5 exceedences of the PM10<br>have been allowed for by using incorrect criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Lidcombe which was used for modelling purposes and is shown in<br>Appendix E of the PPR to provide highest background PM10 (24<br>hour) approaching 40 ug/m <sup>3</sup> . In modelling PM10 impacts it can be<br>seen that an impact from construction greater than 10 ug/m <sup>3</sup> could<br>result in a single exceedance of this criteria. An allowance of 5<br>exceedances per year is considered more reasonable and workable,<br>particularly in light of there fact that in many other jurisdictions eg.<br>US and Qld (with Australia) far less stringent criteria is applied, eg.<br>150 ug/m <sup>3</sup> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                   |      |
|                   | <ul> <li>The assessment does not adequately consider the air quality impacts of the proposed land farming operations. Clarification is required on what will occur during land-farming (on site soil remediation) and whether some 37,000 m3 of unsuitable material is contaminated and if so with what (AQIA pg10). The potential impacts of contaminated materials in dust must also be considered in greater detail. Additionally, it is unclear which Appendix C related to.</li> <li>Clarification is necessary on applied in the AQIA. For example, at part 5.7.6 it appears hourly background PMi0 data are appropriately added each hour to the hourly predictions of impacts from the site. However, Part 6.5 appears to state that a constant background level of 40 ug/m3 is applied to all predictions in the assessment, (pg 36 and 62).</li> </ul>                                                                                                              | The unsuitable fill material does not relate to contaminated soils, but<br>rather geotechnical suitability. All contaminated land will be treated<br>on site (through land farming) or removed off-site for treatment and<br>disposal at suitable locations.<br>There was considered to be no need for a detailed assessment of air<br>quality impacts from contaminated soil to be<br>undertaken. Requirements for management of dust impacts during<br>remediation would be detailed in the RAP.<br>The Appendix C referred to is Appendix C of the AQIA.<br>All modelling assessments (both construction- PM <sub>10</sub> and operational<br>– PM <sub>10</sub> and NO <sub>2</sub> ) are contemporaneous where the modelling uses<br>hour by hour background pollution and meteorological data,<br>and impacts are modelled on an hour by hour basis. The reference<br>to a background PM10 level of 40 ug/m3 (24 hour) is a general<br>statement, as this approximates the highest 24 hour background<br>concentration used in the modelling assessment and in some cases<br>the high background has a large bearing on the highest<br>predicted impacts. A separate attachment (Appendix F) has been<br>prepared which describes the contemporaneous modelling<br>approach for PM <sub>10</sub> construction phase air quality impacts. |                   |      |
|                   | <ul> <li>The mitigation strategy for construction phase air quality impacts includes restricting activities during certain wind conditions. It is assumed from AQIA that restrictions to activities are intended to apply when either the wind speed is greater than 5 m/s (in any direction) or the wind direction is in the sector 210° to 340°, and also when both conditions apply. However, the AQIA text (p.44) suggests that both conditions need to apply before any restrictions take place. It is important that this is clarified as the air quality impacts of the proposal will be influenced by how and when this mitigation measure is applied.</li> <li>The AQIA asserts that the wind speed limitations would not be needed for stage 3 and 4 of construction. The DEC accepts that this is likely to be true for most of the period of stage 3 and 4 construction, but this is not reasonably demonstrated and needs to be adequately justified.</li> </ul> | The reference on p44 is saying that while construction activities in<br>Stages 3 and 4 should observe the same generic dust control<br>mechanisms, this does not extend to the need for wind speed or<br>wind direction controls. With respect to Stages 1 and 2 it is not<br>prescriptive that these wind restrictions will be required either, but<br>they are provided to show that (by modelling) worst-case impacts<br>can be mitigated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                   |      |

|                   | The DEC does not have the expertise to offer advice on traffic volume predictions, thus DEC provides only the general comment that more detail is needed to justify the emissions factors used and more detail about the modelling undertaken should be provided. In relation to emission factors, the DEC notes that the AQIA adopts factors based on those used in a separate management plan for the M5 East Motorway. This may not be applicable due to differing context and therefore the AQIA should instead present the root source of the factors used for the assessment. It is also noted that US EPA Tier 3 factors may appear too low for the equipment that will be used at ILC due to differing national standards. Nonetheless, the DEC recognises that changes to the emission factors or modelling method would only change the absolute values predicted, but not the relative difference between the existing and proposed situations. | The vehicle emission factors used for the off-site air quality impact assessment were sourced from the M5 East Air Quality Management Plant (M5 East AQMP). The M5 East AQMP states that the emission factors were supplied by the EPA with the following references:<br>Xu, C (2001a) 2002 Emission Factors. NSW Environment Protection Authority, personel communications. The three reports from which these factors have been derived are in the process of formal peer review and are: Xu, C (2001) Revision of Emission Factors for Existing Late Model Petrol Cars. MVEPS Improvement Program Technical Report 1; Xu, C (2001) Revision of Emission Factors for Future Model Petrol Cars with Scenario Projections. MVEPS Improvement program Technical Report 2. Xu, C (2001) Development of Diesel Vehicle Emission Factors. MVEPS Improvement Program Technical Report 4. One clarification is that the air quality assessment report in Table 7-9 states that the emission factors used were projected by the EPA for the 2002 road fleet whereas the ILC assessment year is 2016 when it is expected that fleet emissions would be lower. |                   |      |
|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | With respect to the on-site equipment US EPA provided the only available set of "robust" emission factors for the type of equipment proposed, and Tier 3 best co-incided with the likely year when this equipment would be required at Enfield. It should be noted in terms of NO <sub>2</sub> the predicted operational phase impacts (on-site equipment / trucks / trains) are well below DEC 1-hour and annual criteria, at most 77 % of the 1-hour criteria, for the worst-case including background levels. In the case of PM <sub>10</sub> where impacts are only marginally less than the 24-hour criteria it should be noted that there is no difference in particulate emission factors for Tier 0, 1, 2 and 3 equipment, for the relevant engine sizes considered in the assessment.                                                                                                                                                                                                                                                                                                                                                        |                   |      |
|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | At a meeting with the DEC comment was also made with respect to locomotive emission factors in particular the sulphur content of diesel, in so far as how this would impact on particulate emissions. The locomotive emission factors were taken from NPI, 1999 and controls applied as per USEPA420-F-97-051. The quoted diesel sulphur content in NPI, 1999 is 0.18 % which is less than that which will be used by locomotive diesel at the time the ILC becomes operational. Hence the sulphur content data used is considered conservative in terms of both calculation of particulate emissions and SO <sub>2</sub> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                   |      |

| Issue<br>Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Response                                                                                                                                                                                                                                                                      | Stakeholder<br>ID | Name                           |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|--------------------------------|
|                   | As with prediction for construction phase impacts, the operational phase modelling has adopted the incorrect impact assessment criterion for PM10. The DEC also notes off site operational 24-hour average PM10 impacts appear to occur for 3 days annually. In is not clear, though, whether this impact will occur for 8 days annually (because 5 exceedences have been allowed for by using incorrect criteria), or whether it is in fact 3 days. Either way, it would be appropriate for further refinement of the modelling or revision of the Intermodal Terminal operation to demonstrate that the proposal will not exceeded criteria. | The PM10 criteria of 50 ug/m3 (24 hour) is not exceeded by<br>worst-case impacts (background + impact levels) on any occasion<br>(nil exceedance) within residential areas surrounding the ILC. This<br>is shown in Table 7-7 and Figure 5 of Appendix F (Air Quality Study). |                   |                                |
| Air Quality       | RailCorp does not have provisions about air quality management<br>as part of its operating licence responsibilities. SPC will need to deal<br>with this                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Noted. Issues of rail corridor operation should be considered by a wider group than SPC which should include all relevant agencies, including RailCorp.                                                                                                                       | 582               | Rail Corp<br>Submission No 180 |

|                    | Acoustic walls- asks for a condition of consent about the<br>northern wall (located on RailCorp land) that addresses a<br>range of aspects. SPC needs to apply for a licence or lease<br>for the structure;                                                                                                                                                                                                                                                                            | Further consideration and design of the proposed noise<br>wall on RailCorp land is required during detailed design<br>including the requirement for licenses or leasing of land. |             |                               |
|                    | Road overbridge for Wentworth Ave access-Confirms deed<br>of agreement. However notes that the deed does not provide<br>to SPC, RailCorp's approval of the structure. Requests a<br>condition to address a range of matters relating to the<br>bridge, and obtain RailCorp's prior approval for rail related<br>aspects of the structure;                                                                                                                                              | Consultation with RailCorp required during detailed design of the proposed rail bridge. Approval for construction required.                                                      |             |                               |
|                    | Transmission line and other infrastructure- RailCorp seeks a condition of consent that the relocation of its electrical, signalling and communication or other utilities infrastructure will require consultation with and approval by RailCorp.                                                                                                                                                                                                                                       | Consultation and approval required from RailCorp for relocation of electrical signalling, communication equipment and other utilities infrastructure.                            |             |                               |
|                    | Drainage and flood mitigation-Consent condition requiring<br>SPC to submit detail plans for flood and mitigation works to<br>RailCorp for assessment and endorsement.                                                                                                                                                                                                                                                                                                                  | Detailed drainage plans to be submitted to RailCorp on completion, for its information.                                                                                          |             |                               |
|                    | Contamination aspects- Recommends a consent condition re no transfer of contaminants onto adjoining areas.                                                                                                                                                                                                                                                                                                                                                                             | Remediation Action Plan to be prepared and site to be remediated prior to construction commencement.                                                                             |             |                               |
|                    | Cumulative impacts- Report does not address cumulative<br>impacts associated with increased usage of RailCorp<br>network at a regional level, with particular emphasis on<br>freight distribution and noise. Acknowledges this may be<br>outside scope of consent but believes there should be an<br>interagency working party to address the consequential<br>impacts on regional rail corridors associated with projects<br>that contribute to the NSW Government's Port Growth Plan | Sydney Ports is prepared to participate in any<br>interagency working group established to address rail<br>noise impacts along the dedicated rail freight line<br>corridor.      |             |                               |

## Submissions Govt Dept/Agency: COMMUNITY & ECOLOGICAL AREA

| IssueCategory                 | Comments                                                                                                                                            | Response                                                                                                                                                                                                                                                                                                                                                                                        | Stakeholder | Name                                     |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|------------------------------------------|
|                               |                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                 | ID          |                                          |
| Community and Ecological Area | The proposed community and ecological area for example<br>may be considered as an alternative location for the<br>footbridge and Wagon Repair Shed. | Relocation of part of the footbridge to the community<br>and ecological area would be considered during detailed<br>design. Due to extensive termite damage in the timber<br>elements of the wagon repair shed this may not be<br>possible. There is the potential, however, for elements<br>of it to be recycled on site in the form of amenities within<br>the community and ecological area. | 827         | NSW Heritage Office<br>Submission No 141 |

#### Submission Govt Dept/Agency: CONTAMINATION

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Stakeholder | Name                     |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|--------------------------|
| contamination  | A remediation action plan (RAP) should be developed for<br>the site in accordance with SEPP 55 and the DEC's<br>Guidelines for Contaminated Sites. This RAP should<br>address the contamination identified in site investigations<br>and address issues raised in the site audit reports<br>undertaken for the former marshalling yard and the DELEC<br>site. The RAP should also incorporate contingency<br>procedures for managing contamination that is discovered<br>during site development works. | A RAP would be prepared by a suitably qualified<br>contaminated land consultant in accordance with<br>Contaminated Sites: Guidelines for Consultants<br>Reporting on Contaminated Sites, 1997 prior to the<br>commencement of earthworks. This would include<br>specific measures to remediate contamination hotspots<br>identified, cleanup criteria to be achieved and<br>procedures for the identification and management of<br>potential contamination unearthed during remediation<br>and earthworks. | 825         | DEC<br>Submission No 309 |
|                | A site auditor must be engaged to review the adequacy of<br>the RAP. Following the remediation of the site, the site<br>auditor must provide the consent authority with a site audit<br>statement and accompanying site audit report to<br>demonstrate that the site has been made suitable for<br>industrial use.                                                                                                                                                                                      | A validation report will be prepared to ensure the works<br>specified by the RAP have been undertaken<br>satisfactorily.                                                                                                                                                                                                                                                                                                                                                                                   |             |                          |
|                | <ul> <li>The RAP should address (but not limited to) the following issues:</li> <li>Investigation <ul> <li>Further characterisation of contamination along the eastern boundary of the former marshalling yard where sampling density was low and there is a possibility of undetected hotspots;</li> </ul> </li> </ul>                                                                                                                                                                                 | The eastern boundary will be capped with either clean<br>fill/soil (noise barriers) or concrete hard stand. Any<br>potential contamination noted during earthworks would<br>be investigated and remediated in accordance with the<br>RAP.                                                                                                                                                                                                                                                                  |             |                          |
|                | <ul> <li>A further investigation and delineation of arsenic,<br/>zinc and copper hotspots to determine<br/>remediation requirements;</li> </ul>                                                                                                                                                                                                                                                                                                                                                         | Heavy metal contamination hotspots are to be<br>remediated through excavation and off site disposal.<br>Validation of all remediated areas and final exposed soil<br>surfaces would ensure removal of contamination<br>hotspots to concentrations defined in the RAP.                                                                                                                                                                                                                                      |             |                          |
|                | <ul> <li>Assessment of any offsite migration in areas<br/>where TPH has been detected in deep soils near<br/>the site boundary; and</li> </ul>                                                                                                                                                                                                                                                                                                                                                          | TPH contamination is generally limited to the surface<br>layers. TPH contamination beyond 1m would warrant<br>additional investigation to identify potential sources and<br>pathways.                                                                                                                                                                                                                                                                                                                      |             |                          |
|                | <ul> <li>Further investigation of areas where off-site<br/>works are proposed.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                               | Investigations would be undertaken in off site areas identified during the detailed design phase.                                                                                                                                                                                                                                                                                                                                                                                                          |             |                          |

|                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                            | ID          |                          |
| flora and fauna | It is the intention of the recovery planning for GGBFs that<br>frogs from this population, eventually, be able to interact (if<br>only indirectly) with those in the population at Arncliffe<br>(Marsh St wetlands). It is expected that these populations<br>originally were related, given they are both within the<br>Cooks River catchment. Preferably, in the future a series<br>of subpopulations could be established at artificial ponds<br>along the Cooks River. To ensure this is possible, it should<br>be ensured that this development does not create any<br>barriers preventing movement of GGBFs downstream<br>along the Cooks River. Coxs Creek, which will form the<br>northern boundary of the proposed frog breeding<br>and foraging areas, passes under Cosgrove Rd and into<br>the upper reaches of the Cooks River. | Frog movement corridors were a key consideration<br>when designing the Community and Ecological area.<br>Frog foraging areas and frog ramps within Coxs Creek<br>have been included in the concept design.                                                                                                                                                 | 825         | DEC<br>Submission No 309 |
|                 | <ul> <li>The proposed management plan for the site (Appendix G, p33) should address the following issues:</li> <li>Construction of temporary frog-proof fencing to prevent frogs entering construction areas;</li> <li>Construction of permanent frog-proof fencing to prevent frogs entering operational areas (apart from crossing the existing rail yards to the habitat areas shown in Figure 4, Appendix G);</li> <li>Clearance of frogs from construction areas prior to construction;</li> </ul>                                                                                                                                                                                                                                                                                                                                     | Fauna fences would be included in the Construction<br>EMP to be prepared by the construction contractor.<br>A review of the appropriate permanent frog barriers<br>would be under undertaken during the detailed design<br>phase.<br>An ecologist would inspect the site to ensure any frogs<br>present are cleared prior to construction<br>commencement. |             |                          |

| IssueCategory        | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Stakeholder | Name                                 |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|--------------------------------------|
| Heritage/Archaeology | The Heritage Office notes that the applicant, in line with the recommendations contained in the AHI, proposes to retain two items of State significance. (Tarpaulin Factory and Pillar Tank) on site.                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 827         | Heritage Office<br>Submission No 141 |
|                      | However the details of the potential use of these items are<br>not clear at this stage. The applicant should be asked to<br>provide more information about the conservation and<br>adaptive reuse of these items as part of the proposed<br>development, in particular the Tarpaulin Factory.                                                                                                                                                                                                                                                              | Reuse options for the Tarpaulin Factory and Pillar water<br>tank will be further investigated as part of the detailed<br>design phase of the project. The Tarpaulin Factory will<br>be stabilised against further deterioration and, in<br>consultation with the Heritage Office and the<br>community, options for its reuse at its present site will be<br>investigated. Only if on-site reuse is found not to be<br>feasible consideration be given to its relocation off-site<br>to a railway heritage museum or demolition. The Pillar<br>water tank will be subject to further consideration for<br>relocating it on-site. The relocation will be undertaken<br>prior to the commencement of Stage 2 construction<br>works.                                                                                                                    |             |                                      |
|                      | The items of Local significance- namely the Pedestrian<br>footbridge and Wagon Repair Shed and Yard Master's<br>Office would be offered to a railway heritage organisation.<br>The H O considers that these items of local significance<br>should be ideally retained on site. Their contribution to the<br>significance of the former Marshalling Yards as a whole<br>should be taken into consideration. In this respect the<br>applicant should be asked to explore alternative options to<br>retain and adaptive reuse of these items within the site. | Due to the nature of activities to occur on the site reuse<br>of the Yard Master's office is not possible. The Yard<br>master's office cannot be reused on-site or realistically<br>offered to a railway heritage organisation due to its brick<br>structure. Prior to demolition archive recording of the<br>item will be undertaken, according to Heritage Office<br>guidelines.<br>The footbridge is to be reused on site if possible. Further<br>studies will be undertaken prior to construction to<br>determine the feasibility and location of this.<br>Due to extensive termite damage in the wagon repair<br>shed very few elements are fit for reuse. This will be<br>revaluated and investigations undertaken to determine<br>if some items of this may be able to be reused on site or<br>relocated off-site to a railway organisation. |             |                                      |
|                      | The proposed community and ecological area for example may be considered as an alternative location.                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Reuse of part of the footbridge and elements of the<br>wagon repair shed within the community and ecological<br>area would be considered as part of the options studies<br>for reuse. This will be undertaken during detailed<br>design, prior to the construction phase of the project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |             |                                      |
|                      | Removal to another site altogether should be considered<br>as a last resort after considering all other options and if<br>their retention on site is not possible because of the<br>operation requirements of the ILC. If relocation of these<br>items to a 'railway heritage organisation' is the only viable<br>option, the applicant should be asked to explore possible<br>locations and undertake necessary procedural steps with                                                                                                                     | If during the considerations for reuse, it is established<br>that reuse of heritage items on site is not an option, then<br>the items would be offered to external heritage<br>organisations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |                                      |

## Submissions Govt Dept/Agency: HERITAGE & ARCHAEOLOGY

| the relevant organisations before approval is given to the proposed development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |

| The former Yard Master's Office has been assessed as<br>having low heritage significance in the AHI because it has<br>lost much of its heritage significance through the<br>modifications to the building and removal of its significant<br>elements. Given that this item has lost most of its original<br>details the HO does not object to the demolition of the<br>former Yard master's Office. However full archival<br>recording of this item or any other heritage item on the site<br>that is to be demolished or relocated should be undertaken<br>in accordance with the NSW HO guidelines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Full archival recording of the Yard Master's office would be undertaken prior to demolition.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| Applicant should be asked to prepare a heritage<br>interpretation plan and strategy for the whole site prior to<br>commencement of works. This should be prepared in<br>consultation with Heritage Office and in accordance with<br>Heritage Office guidelines. The approved interpretation<br>plan shall be imparted at an appropriate location for public<br>appreciation for example at the proposed community and<br>ecological area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | A heritage interpretation plan and strategy for the entire<br>site will be undertaken by SPC prior to construction<br>works commencing on site                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| The AHI, however, does not assess the impacts of the proposed development on the potential European archaeological relics on the site. It is understood that the proposed project will be an 'approved project' for the purposes of Part 3A of the EP&A Act and 75U of the Act therefore suspends the requirement for an excavation permit under section 139 of the Heritage Act. The applicant, however, should be asked to investigate the impact of the proposed development on the potential archaeological significance of the site. The assessment should be accompanied by an archaeological research design and appropriate mitigation techniques, and should be ideally undertaken prior to the issue of the consent as the findings of this assessment may result in some recommendations to the proposed design. It is requested that upon the result of thes studies appropriate conditions regarding the prevention of the potential archaeological remains and their appropriate management should be included within the conditions of consent should approval be granted. | An archaeological assessment for indigenous and<br>non-indigenous heritage was undertaken by Navin<br>Officer in 2001. The report was referenced in the study<br>by Graham Brooks and Associates (Appendix H to the<br>EA). The indigenous studies in the Navin Officer report<br>were updated for this project, but no changes were<br>warranted for the non-indigenous aspects of the report.<br>This report will be provided to the Department of<br>Planning and the Heritage Office.<br>The Navin Officer (2001) report concluded that," given<br>the picture of massive disturbance across the site, it is<br>unlikely that significant archaeological deposits remain<br>on the site. The only possibility is that some deposits<br>have been sealed under extant buildings or slab<br>foundations. Even so, it is unlikely that such deposits<br>have the potential to tell us more about this site or the<br>construction of what are relatively well documented<br>buildings". Limited archaeological testing for European<br>archaeology is recommended for the area of the Wagon<br>Repair Shed and the Yard Master's Office. This will be<br>undertaken. |  |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                   | ID          |                                 |
| management     | We suggest the additional actions to those identified in the<br>environmental management plan (Table 21-1) to mitigate<br>construction noise impacts:                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                   | 833         | NSW Health<br>Submission No 318 |
|                | <b>Noise and Vibration</b><br>Minimise construction noise impact on surrounding<br>residences.                                                                                                                                                                                                                                                                                                                    | This would be dealt with in the Construction EMP                                                                                                                                                                                                  |             |                                 |
|                | Time restriction for construction activities - which allow<br>construction work from 7am to 6pm on Saturday (if<br>approved) ONLY if this work is inaudible at residential<br>premises as outlined in Appendix E, Section 6.4.                                                                                                                                                                                    | SPC will seek to maintain the construction times as specified<br>in the EA. However, an undertaking will be provided, and<br>written into the Noise Management Plan, that high noise<br>operations will not be undertaken after 1pm on Saturdays. |             |                                 |
|                | A more extensive community consultation and liaison plan<br>which include community involvement in the plan,<br>community access to compliance monitoring data, regular'<br>reporting of complaints, and the actions undertaken to<br>resolve these complaints.                                                                                                                                                   | Consultation Plans would be prepared and implemented prior<br>to construction and operation commencement.<br>Communication methods will be developed at that stage.                                                                               |             |                                 |
|                | Utilising "best practice" technology should specify a commitment to the utilisation of alternative quieter construction technologies (not just technology on existing equipment) and specifically identify these technologies. This is especially important for the most significant noise generators for each stage as identified in Appendix E pp.47 - 48                                                       | Actions are considered reasonable. Noise management<br>measures as outlined in Chapter 11 of the EA would be<br>incorporated into the Construction Noise Management Plan<br>developed for the site.                                               |             |                                 |
|                | The use of alternative quieter technologies (such as electric<br>powered machinery). The implementation of best work<br>practices and site design to minimise intermittent noise<br>generation from unloading and loading containers.                                                                                                                                                                             | The Operational Environmental Noise Management Plan<br>would include procedures for monitoring noise and responsive<br>noise complaints mechanisms.                                                                                               |             |                                 |
|                | A comprehensive community consultation and liaison plan<br>that includes community involvement, initial monitoring to<br>determine actual impact, a response strategy should noise<br>impacts be unacceptable, and a responsive noise<br>complaints mechanism, with regular reporting of complaints<br>and the actions undertaken to resolve these complaints to<br>the Department of Planning and the community. | Noise management measures and consultation and liaison<br>will be incorporated into the Operation Noise Management<br>Plan developed for the site.                                                                                                |             |                                 |
|                | Minimise dust generation during construction Dust<br>Management Plan should include continuous downwind<br>boundary monitoring of PM10, with feedback mechanism to<br>site manager when pre-determined levels for modifying and<br>ceasing works are reached.                                                                                                                                                     | This is proposed.                                                                                                                                                                                                                                 |             |                                 |
|                | Timely mechanism linking community complaints line to site<br>manager so that works can be modified or ceased when<br>high off-site dust levels are reported.                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                   |             |                                 |
|                | The M5 LAQMP has not been justified, and more recent,                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                   |             |                                 |

|  | <ul> <li>validated emission factors should have been used.<br/>The approach to modelling the on-site contribution to<br/>operational phase impacts is appropriate, however we note<br/>that the assessment has assumed the use of low emission<br/>(US Tier 3 &amp; LPG) plant. We note that there is no<br/>commitment in the management plan to use this plant.</li> <li>The use of emission data for cars and trucks from the M5<br/>LAQMP has not been justified, and more recent, validated<br/>emission factors should have been used.</li> <li>Operational Environmental Management Plan<br/>The environmental management plan (Table 21-2) should<br/>be expanded to further mitigate operational phase air<br/>quality impacts. We suggest additional actions: <ul> <li>Minimise emissions from plant and equipment</li> <li>All on-site plant to be low (US Tier 3 or better) or<br/>zero</li> <li>emission (such as electric powered<br/>machinery)(also provides noise reduction<br/>benefits).</li> <li>On-site staff transport to be electric, hybrid or<br/>other low emission vehicles OR the requirement<br/>for the projected 300 on-site car trips per hour be<br/>substantially reduced by better site design and<br/>work-practices.</li> <li>Trucks accessing the site to be Euro 3 or better,<br/>on approved maintenance schedule.</li> <li>Requirement for minimal truck idling times<br/>on-site.</li> <li>Liaise with rail freight operator to utilise cleaner<br/>fuel improved maintenance to reduce emissions.</li> </ul></li></ul> | The vehicle emission factors used for the off-site air quality<br>impact assessment were sourced from the M5 East Air Quality<br>Management Plant (M5 East AQMP). The M5 East AQMP<br>states that the emission factors were supplied by the EPA with<br>the following references:<br>Xu, C (2001a) 2002 Emission Factors. NSW Environment<br>Protection Authority, personel communications. The three<br>reports from which these factors have been derived are in the<br>process of formal peer review and are: Xu, C (2001) Revision<br>of Emission Factors for Existing Late Model Petrol Cars.<br>MVEPS Improvement Program Technical Report 1; Xu, C<br>(2001) Revision of Emission Factors for Future Model Petrol<br>Cars with Scenario Projections. MVEPS Improvement<br>program Technical Report 2. Xu, C (2001) Development of<br>Diesel Vehicle Emission Factors. MVEPS Improvement<br>Program Technical Report 4.<br>With respect to the on-site equipment US EPA provided the<br>only available set of "robust" emission factors for the type of<br>equipment proposed, and Tier 3 best co-incided with the likely<br>year when this equipment would be required at Enfield. It<br>should be noted in terms of NO <sub>2</sub> the predicted operational<br>phase impacts (on-site equipment / trucks / trains) are well<br>below DEC 1-hour and annual criteria, at most 77 % of the<br>1-hour criteria, for the worst-case including background levels.<br>In the case of PM <sub>10</sub> where impacts are only marginally less<br>than the 24-hour criteria it should be noted that there<br>is no difference in particulate emission factors for Tier 0, 1, 2<br>and 3 equipment, for the relevant engine sizes considered in<br>the assessment. |  |

|  | Remediate contaminated soils<br>A comprehensive remediation plan needs to be developed,<br>including better characterisation of existing contaminant<br>levels and strategies to minimise migration of contaminants<br>from the site. The plan should include particular<br>consideration of the potential for dispersion of contaminants<br>during excavation, and an assessment of any additional<br>health risk to surrounding residents above that of inert dust<br>exposure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | A Remediation Action Plan would be prepared by a suitably<br>qualified contaminated land consultant in accordance with<br>Contaminated Sites: Guidelines for Consultants Reporting on<br>Contaminated Sites, DEC 1997 prior to the commencement of<br>earthworks. This would include specific measures to<br>remediate contamination hotspots identified, cleanup criteria<br>to be achieved and procedures for the identification and<br>management of potential contamination unearthed during<br>remediation and earthworks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
|  | If land farming to volatise hydrocarbons from contaminated<br>soil is undertaken then a health risk assessment for the<br>surrounding community should again be undertaken.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Hydrocarbons would be bioremediated rather than volatilised.<br>No risk study would be required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |

| management | For the construction phase of the project, the DEC's principal concerns are noise impacts, sediment and erosion control, dust control, waste management, contaminated land and chemical storage. Generally, the DEC considers that the environmental impacts associated with construction are manageable to acceptable levels provided all project impacts are fully characterised during the sub-plan process and appropriate controls and mitigation measures undertaken.                                                                                                                            | A series of environmental management plans are to be<br>prepared for the construction and operation phases to ensure<br>identified impacts are minimised and managed.               | 825 | DEC<br>Submission No 309 |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|--------------------------|
|            | Environment Protection Licence<br>The DEC notes on page 2-8 of the EA that the ILC may be<br>used to store in excess of 2,000 tonnes of chemical<br>substances. An Environment Protection Licence will be<br>required if activities at the ILC result in all or part of the<br>facility meeting the criteria for a 'Chemical Storage Facility',<br>as defined in Schedule 1 of the Protection of the<br>Environment Operations Act 1997 (POEO Act). The DEC<br>stresses that any such licence could cover a range of<br>environmental media as required and, for example, may<br>include noise limits. | SPC will not be seeking a licence at this stage. An EPL may be<br>sought by the site operators if quantities of chemicals to be<br>handled or stored exceeded the threshold limits. |     |                          |
|            | Environment Performance Monitoring<br>The DEC'S experience with similar infrastructure projects<br>suggests environmental performance would be significantly<br>enhanced by an independent performance monitoring and<br>reporting process. To be most effective, the monitoring and<br>reporting should inform and be integrated with the project's<br>management decision making process.                                                                                                                                                                                                            | Noted.<br>Comprehensive environmental management plans to be<br>prepared for the construction and operation phases would be<br>based on current best practice methods.              |     |                          |
|            | The DEC is the Appropriate Regulatory Authority for the construction phase of the project under section 6 of the POEO Act. In this regard, the DEC expects that the proponent ensures optimal environmental performance on the site at all times, including the implementation of appropriate controls that are maintained on a regular basis.                                                                                                                                                                                                                                                         | The CEMP would include measures for monitoring and reporting on environmental performance. Continual improvement would be a key environmental objective.                            |     |                          |
|            | Chapter 21, page 21-1 of the EA states that the<br>environmental management commitments proposed<br>include the preparation of a Construction Environment<br>Management Plan (CEMP). The CEMP should contain an<br>environmental monitoring and reporting program and it is<br>important that this program facilitates ongoing<br>improvements in the on-the-ground performance of the<br>project.                                                                                                                                                                                                     |                                                                                                                                                                                     |     |                          |
|            | The selected contractors for the project should receive an appropriate environmental induction before working on the site. Environmental training of site personnel should include regular 'toolbox' meetings to discuss mitigation measures to resolve complaints and other environmental impact issues.                                                                                                                                                                                                                                                                                              | The CEMP would include requirements for environmental inductions and awareness training for contractors prior to commencement on site.                                              |     |                          |

| In the Department of Housing's Managing Urban<br>tormwater - Soils and Construction, 4th Ed, 2004 (the Blue<br>look). The DEC emphasises that once adequate sediment<br>nd erosion controls are established on site, they should be<br>aintained on a regular basis and updated as required in<br>esponse to changing site conditions. Further, the DEC<br>dvises that all temporary construction exits should be<br>rimarily fitted with appropriate vehicle shakedown and<br>rashing facilities to contain sediment and mud on site.<br>hese facilities may be complemented with secondary<br>nd/or tertiary controls if needed.                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Chemical storage<br>Chemical Storage of fuels, oils or chemicals are to be<br>tored on site, then appropriately bunded and covered<br>torage facilities with impervious floors should be provided<br>to prevent leaching or spillage of these materials into the<br>urrounding environment. The DEC's document Bunding<br>nd Spill Management provides guidelines for the<br>evelopment of bunds. Where applicable, the construction<br>f bunds should comply with the requirements of:<br>Australian Standard AS 1940 2004: The Storage and<br>landling of Flammable and Combustible Liquids;<br>Australian Standard AS4452 1987: The Storage and<br>landling of Toxic Substances; and<br>The Dangerous Goods Act 1975. | To be addressed in the CEMP and OEMP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Noise          | <b>Construction Noise</b><br>The construction noise levels provided in the EA indicates<br>that there is the potential for an increased risk of health<br>effects from noise exposure for all residences at various<br>stages of construction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Noted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 833               | NSW Health<br>Submission No 318 |
|                | NSW Health indicated in its Director General requirements that noise impacts upon sensitive receptors should be specifically considered. This does not appear to have been addressed and consequently the predicted impact of construction noise upon St. Anne's School, Strathfield South High School and other sensitive receptors cannot be- ascertained.<br>It is likely, as with many major construction projects in an urban area, that exceedance of the noise goals will occur after feasible and reasonable noise mitigation measures have been used. Section 4.12.5 lists the proposed construction times as 7am to 6pm Monday to Saturday. However, the DEC advises that normal construction times should be 7am to 6pm Mondays and Public Holidays. Works should not be conducted outside these hours unless there is specific justification for doing so. In addition a, a community consultation program and a 24 hour complaints handling system should be implemented prior to any out of hours works.                                                                                                               | Construction noise was assessed in the report to the<br>nearest affected residential receivers, as these were<br>closer to the site than other sensitive receivers,<br>including St. Anne's School and Strathfield South High<br>School. Further to this the Strathfield South High School<br>is shielded from the site by the industrial area to the<br>north of the site and the existing noise wall along the<br>southern boundary of the school. There are no DEC<br>criteria that distinguish appropriate levels for residential<br>receivers versus non-residential receivers and impacts<br>at non-residential locations. Therefore<br>the assessment that has been undertaken for the<br>construction phase noise is considered appropriate.<br>SPC will seek to maintain the construction times as<br>specified in the EA. However, an undertaking will be<br>provided, and written into the Noise Management Plan,<br>that high noise operations will not be undertaken after<br>1pm on Saturdays. |                   |                                 |
|                | <b>Operational Noise</b><br>Table 11-7 (Chapter 11) of the Environmental Assessment<br>highlights the predicted exceedances of operational noise<br>criteria when compared to the NSW EPA Industrial Noise<br>policy guideline values. It is noted that predicted noise<br>levels for two of the six residential sites considered exceed<br>criteria levels during calm and isothermal weather<br>conditions even after mitigation measures are used.<br>Exceedances are greater under adverse weather<br>conditions with these adverse wind conditions expected to<br>occur approximately one third of the year. The<br>exceedances have been predicted to be as much as 15dB<br>above criteria. It is of further concern that noise impacts up<br>to 7dB above criteria are predicted at St Anne's school. It is<br>noted that the predicted values are based on the<br>assumption that all noise sources operate concurrently<br>("worse-case" assessment). However, the noise<br>consultants report noted that there is little to no reduction in<br>noise impact between a "worse-case" scenario and<br>"normal-case" scenario. | Mitigation measures were extensively reviewed as part<br>of the EA. It is considered that at this stage of the<br>project, when the design is still fairly flexible, all<br>reasonable and feasible mitigation measures have been<br>considered to reduce overall noise emissions from the<br>site. Additional mitigation will need to be considered at<br>the design phase to reduce noise levels to achieve<br>compliance with the Project Specific Noise Levels<br>(PSNLs). Any further measures, such as limiting plant<br>noise levels and use of local shielding (eg container<br>stacks, sheds, buildings) in specific locations. These<br>more specific design matters are difficult to determine at<br>this stage of the project.                                                                                                                                                                                                                                                                   |                   |                                 |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Stakeholder<br>ID | Name                     |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|--------------------------|
|                | criteria are predicted in all weather conditions, some by as<br>much as 15dB (giving a 30dB increase from background).<br>As this development intends to be an ongoing 24hour/7day<br>a week operation it is important that community noise<br>impacts strictly comply with noise criteria and it would be<br>desirable to reduce this level below this criteria where<br>practical. Intermittent /instantaneous noise generation<br>should be kept to a minimum to reduce any potential<br>adverse effect on health through both sleep disturbance<br>and annoyance.                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                   |                          |
|                | <b>Road Noise</b><br>Current road noise levels are already between 7 to 21dB<br>above the criteria set in DEC Environmental Criteria for<br>Road Traffic Noise. The predicted additional noise<br>generated from this proposed development falls within the<br>2dB increase allowed under the DEC Environmental<br>Criteria for Road Traffic Noise. Despite this compliance<br>additional mitigative options should be pursued in view of<br>the pre existing noise impacts experienced by affected<br>residents.                                                                                                     | The project is not responsible for existing road traffic noise levels. The contribution to traffic noise from this project is calculated to be in the order of $0 - 0.2$ dB(A) at residential receiver locations – refer to the RT&A Technical Memo (Appendix E). Such a small traffic noise increase is considered minor, insignificant and inconsequential. Furthermore, the NIA found that mitigation of existing noise, through the provision of noise barriers for residences is not possible as driveway access to roads is required. Therefore it would not reasonable and feasible to reduce traffic noise levels. |                   |                          |
|                | <b>Rail Noise</b><br>This has not been directly assessed in this application and<br>relied on Port Botany Expansion EIS assessment. Due to<br>the small number of predicted train movement it is<br>estimated that an increase in noise levels from this source<br>should be up to 1dB. This increase should be further<br>reconsidered in the context of cumulative noise impacts.                                                                                                                                                                                                                                   | The appropriate approach to the management of effects<br>from the rail freight line corridor is one that includes all<br>relevant Government agencies, including DEC,<br>RailCorp and ARTC. SPC will work with these other<br>agencies and relevant Councils to consider ways of<br>managing impacts associated with rail operations in the<br>dedicated freight rail corridor.                                                                                                                                                                                                                                            |                   |                          |
|                | <b>Cumulative Noise Impacts</b><br>it is important that cumulative predicated impact of road<br>and rail be added to the predicted operational impacts to<br>determine a more accurate prediction of noise impacts. We<br>note that cumulative impacts of road and operational noise<br>may be significant to the northwest of the proposal<br>(residences located between Norfolk Road, Hume<br>Highway, Roberts Road and Waterloo Road). Cumulative<br>rail and operational noise impacts may be significant to the<br>southeast of the proposal (residences located in the vicinity<br>of Bazentin Road, Belfield) | Cumulative noise impacts have been considered to the<br>extent that NSW noise policy allows, through the<br>application of the amenity criteria. It is noted that in<br>NSW road, rail and industrial noise are assessed to their<br>own separate criteria, as different types of noise are<br>perceived differently in the community. There are<br>currently no overall criteria that address total<br>environmental noise.                                                                                                                                                                                               |                   |                          |
| Noise          | For operation of the project, the DEC's principal concerns<br>are noise impacts and air quality issues<br>The DEC notes that the Noise Impact Assessment<br>presents only the result of an assessment of potential noise<br>enhancing weather effects. The meteorological data used<br>and the weather station location has not been presented in<br>the NIA.                                                                                                                                                                                                                                                         | Noted<br>The NIA presents predictions under both<br>calm-isothermal (acoustically neutral) conditions and<br>adverse weather (noise-enhancing wind) conditions.<br>The weather stations from which the meteorological<br>data was acquired are Bankstown Airport AWS and the                                                                                                                                                                                                                                                                                                                                               | 825               | DEC<br>Submission No 309 |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | According to the NSW INP, prevailing winds above 3m/s (11km/h) are not considered in noise assessments as they do not increase noise impacts. Furthermore, noise measurements should not be undertaken when wind speed exceeds 5m/s (18km/h).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                   |      |
|                | The DEC notes that the noise modelling considered two<br>broad operating scenarios. The difference between the two<br>scenarios is that Scenario 1 included both shunting<br>locomotives (2x48class) and locomotives involved in<br>moving a train set on to the site (3x81 class), while scenario<br>2 only considered the shunting locomotives. It should be<br>noted that it is DEC's experience that older and noisier<br>locomotives also operate on the Botany Goods Line.                                                                                                                                                                                                                                                | SPC advised that, based on current information,<br>48-class locos will typically be used as 'shuttle trains'<br>and 81-class locos will be used for rural bound trains.<br>The issues of older and noisier locomotives are a result<br>of new entrants to compete in a deregulated freight rail<br>market. As the percentage of container movements by<br>rail increases, the improved economic certainty will<br>increase the commercial viability for further investment<br>in more efficient rolling stock.                                                                                                                                                                                                                                                                                                                                                                       |                   |      |
|                | The NIA does not indicate the number of residences<br>potentially affected by noise levels that exceed the Project<br>Specific Noise Levels (PSNL) under noise enhancing<br>weather conditions. The DEC notes that Table 4.12 in the<br>NIA indicates that under calm isothermal conditions that<br>140 houses are predicted to experience noise levels<br>slightly above the PSNL. The number of houses with<br>significant exceedances above the PSNL during noise<br>enhancing weather conditions is likely to be significantly<br>more.                                                                                                                                                                                     | It is noted that the number of houses affected shown in<br>Table 4.12 of the NIA is high as the noise model was<br>conservative in not taking into account local shielding<br>provided by residential and other non-industrial<br>buildings off site. Such building data was unavailable for<br>inclusion in the noise model at this stage. It is intended<br>that building data be included in the detailed noise<br>model to be run at the Detailed Design / EMP phase,<br>which is expected to show a significant reduction in the<br>number of houses affected. Therefore, an analysis of<br>the number of affected houses would be more<br>accurately conducted at the DD / EMP phase and after<br>all additional reasonable and feasible noise mitigation<br>options, as set out in the RT&A Technical Memo (in<br>Appendix E), have been incorporated into the noise<br>model |                   |      |
|                | It is clear from the NIA that widespread and significant<br>exceedances of the PSNL are predicted. (In this case the<br>PSNL are determined from the amenity criteria).<br>Importantly, predicted noise levels are normally used to<br>establish appropriate noise limits for an operation (where<br>applicable). In cases where it is not possible to achieve the<br>PSNL even after applying all feasible and reasonable<br>mitigation measures, predicted noise levels may be used to<br>set noise limits that are up to 5 dB above the PSNL<br>following negotiation with the regulator and/or consent<br>authority. In contrast, negotiated agreements would<br>normally be required where predicted levels are still more | Exceedance of the noise criteria was predicted after the application of mitigation measures, but only during adverse wind conditions and mostly in terms of the 'amenity' criteria. The modelling conservatively assumes that the site is operating at capacity and all plant is operating at full load over the entire night-time 9 hour assessment period. As this is unlikely to occur, then the typical operational scenarios have now been modelled. The results of these assessments are presented in the RT&A Technical Memo in Appendix E. In summary compliance is achieved with both the                                                                                                                                                                                                                                                                                   |                   |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Stakeholder<br>ID | Name |

|                | than 5 dB above the PSNL after the application of all<br>feasible and reasonable mitigation measures.<br>In view of the likely number of noise-sensitive receivers<br>affected by exceedances of the PSNL and the magnitude<br>of these exceedances, it is recommended that:<br>- Further mitigation measures are investigated with a view<br>to reducing the extent and magnitude of exceedances of<br>the PSNL to within an acceptable range, including through<br>the use of best-practice rolling stock on the ILC site; and<br>- Additional consideration is give to the extent to which<br>negotiated agreements may be feasible and reasonable<br>mitigation measure, for example land use mapping with<br>overlayed noise contour plots.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <sup>1</sup> Intrusiveness' and the 'Amenity' PSNLs under calm and<br>worst-case noise-enhancing wind scenarios, at all<br>receivers with the exception of a few minor<br>exceedances during adverse wind conditions of<br>1-2dB(A) and one 4dB(A) exceedance under adverse<br>wind from one specific direction. These results do not<br>include additional noise mitigation measures, such as<br>those discussed in the RT&A Technical Memo,<br>therefore, there is scope to further reduce noise<br>emission levels from the operation of the site as part of<br>the DD / EMP phase, when more specific details about<br>the site and its operations are known, in order to comply<br>with the PSNLs.<br>After all additional reasonable and feasible measures<br>are incorporated into the design at the DD/EMP phase<br>(as set out in the RT&A Technical Memo in Appendix E),<br>it is expected that the PSNLs will be achieved.                                                                                                                                                                                                                                                                                                                                                                    |                   |      |
|                | The DEC advises that the exceedances of the sleep<br>disturbance screening criteria are significant. Current DEC<br>guidelines recommended that where the screening criteria<br>is exceeded that a more detailed analysis is required. The<br>detailed analysis should cover the maximum noise level or<br>L <sub>A1. (tminute)</sub> , the extent that the maximum noise level<br>exceeds the background level and the number of times this<br>happens in the night period. Some guidance on possible<br>impact is contained in the review of research results in the<br>appendices to the Governments Environmental Criteria for<br>Road Traffic Noise (ECRTN). Other factors that may be<br>important in assessing the extent of impacts on sleep<br>include:<br>• how often high noise events will occur;<br>• time of day (sleep disturbance is normally taken to occur<br>between 10pm and 7am);<br>• whether there are times of day when there is a clear<br>change in the noise environment (such as during early<br>morning shoulder periods).<br>The NIA concludes that "under calm and isothermal<br>conditions the levels remain below 65dB(A), which is<br>considered to be the level that could cause arousal based<br>on more recent research".<br>The reference to 65dB(A) comes from the Environmental<br>Criteria for Road Traffic Noise (ECRTN) Appendix B which<br>presents the results of limited studies regarding awakening<br>reactions. The research suggests that maximum internal<br>levels not exceeding 50-55dB(A) are unlikely to cause<br>awakening reactions. It is generally postulated that a 10dB<br>transmission loss occurs between a typical residential<br>facade with windows open to allow minimum Building Code | The DEC's sleep arousal criterion is currently being<br>reviewed, as the general opinion is that this criterion is<br>conservatively low. For the NIA, guidance was taken<br>from the EPA's ENCM, which provides a conservative<br>criterion, and the ECRTN, which sets a suitable criterion<br>which will ensure that 90% of the population (including<br>the aged) are protected in their sleep, based on recent<br>research.<br>However, it is understood that the current DEC thinking<br>is that an initial screening test should be carried out to<br>determine whether instantaneous noise sources at night<br>comply with the criteria established in the ECRTN. If<br>noise levels are found to exceed, more detailed analysis<br>is required to determine the extent of potential<br>disturbance to sleep, based on the number of events,<br>timing of events etc.<br>It is unlikely that this level of detail can be provided at<br>this early stage of the project. This matter would be<br>better addressed at the design stage as part of the EMP,<br>when details of site operations are known.<br>Notwithstanding this, a more detailed analysis of sleep<br>disturbance issues is carried out and included in the<br>RT&A Technical Memo (Appendix E), based on several<br>assumptions. |                   |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Stakeholder<br>ID | Name |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|------|
|                | of Australia ventilation requirements, hence the reference<br>to an external level of 65dB(A).<br>Whilst the material in Appendix B to the ECRTN may be<br>used as part of an assessment of sleep disturbance<br>impacts, it should not be relied upon as being capable of<br>informing an objective criteria. Other factors such as the<br>number of times the maximum noise levels events are<br>likely to occur during the night time period and the nature<br>and character of the noise needs to be considered.<br><b>Road Noise Assessment</b><br>Table 5.4 in the NIA indicates that predicted 2016<br>LAeq,15hr and LAeq,9hr noise levels, including ILC traffic,<br>will not result in a greater than 2dB increase in existing<br>traffic noise levels. It appears that the predicted 2016<br>LAeq,period levels have also taken into account natural<br>traffic growth (growth the would occur regardless of the<br>ILC), and hence the predicted levels are conservative. It<br>would however be beneficial for the traffic noise increase<br>associated solely with ILC traffic be reported. However, it<br>should be noted that the traffic noise levels being<br>experienced on Liverpool Road and Roberts Road<br>significantly exceed the Roads and Traffic Authority's<br>(RTA's) definition of acute traffic noise exposure (ie acute<br>traffic noise levels are levels exceeding L.Aeq,i5hr 65dB(A)<br>and LAeq,ghr 60dB(A)). This should be considered in the<br>context that one of the objectives of the ILC is to reduce | The assessment carried out in the NIA, compares 2016<br>traffic noise levels (with ILC) to 2006 future-existing<br>noise levels (without ILC). This type of assessment is<br>considered to be more conservative than a direct<br>comparison in 2016.<br>Nonetheless, an assessment which compares traffic<br>volumes for with and without ILC (ie natural growth only)<br>is attached in the RT&A Technical Memo (in Appendix<br>E).                                                                                                                                                                                                                                                                                                                               |                   |      |
|                | The number of residences experiencing acute noise levels<br>has not been identified. This is not a criticism of the NIA, as<br>that level of assessment is not normally undertaken.<br>However, given the government objective of reducing road<br>traffic noise increases on roads surrounding Port Botany, it<br>would seem logical to consider the extent of traffic noise<br>impact in the vicinity of the proposed ILC in terms of<br>exposure to acute noise levels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | It is agreed that this is not usually required as part of this<br>sort of assessment, but it could be considered during the<br>DD/EMP phase. That is, the number of residences<br>exposed to acute noise levels (with/without ILC) will be<br>identified more accurately during the DD/EMP phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                   |      |
|                | Rail Noise Assessment<br>The DEC'S position on the rail noise assessment for the<br>Botany Goods Line is that no holistic and well informed<br>analysis of the potential noise impacts arising from the<br>Governments Policy of increasing rail modal share of port<br>related traffic has been undertaken. More importantly, the<br>responsibility and commitment to an assessment, and<br>where necessary noise mitigation, is not clear. Further, the<br>DEC directs the Department of Planning (DoP) to the Land<br>& Environment Court proceedings for Robert Duncan Bell v<br>Minister for Urban Affairs & Planning (No. 10046 of 1997)<br>so as DoP can determine, in a planning sense, whether the<br>assessment of rail noise impacts satisfies planning                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The EA outlined that, if the NSW Government policy that<br>40% of containers to and from Port Botany are to be<br>carried by rail by 2011, the number of freight trains using<br>the dedicated line from Port Botany would increase<br>significantly beyond current levels, regardless of<br>whether the ILC at Enfield is developed or not. The<br>proposed ILC would not be generating more freight<br>trains along the line. Rather, it would provide a loading /<br>unloading point for some freight trains that are expected<br>on and must use that line. The management and<br>regulation of noise and vibration issues on the freight<br>line is a matter for RailCorp (the current Environment<br>Protection Licence (EPL) holder), the likely future EPL |                   |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Stakeholder<br>ID | Name |

|                | requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | holder (ARTC) and the regulator of the licence<br>(Department of Environment and Conservation (DEC)).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                   |      |
|                | The DEC also emphasises that the NIA has not explored<br>the extent to which the use of best- practice rolling stock<br>could be used to reduce the rail-related impacts both at the<br>II C and along the rail corridor between the II C and Port                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The operation of the rail transport of freight to and from<br>Enfield falls within the existing operating licences for the<br>freight line, and no further assessment is required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                   |      |
|                | Botany. It is the DEC's experience that valuable reductions<br>in noise can be achieved through the use of modern rolling<br>stock. It is noteworthy that the NIA assumes a class of<br>locomotives for shunting that have typically been in service<br>for 35 to 40 years and a class of mainline locomotives that<br>have typically been in service for 20 to 25 years. Options<br>for best-practice rolling stock that could be considered for<br>the ILC include:<br>• modern locomotives that achieve the current locomotive                                                                                                                                                                                                                           | However, it is noted in the DEC's comment on the rail<br>noise assessment for the Botany Goods Line that no<br>holistic and well informed analysis of the potential noise<br>impacts arising from the NSW Governments aim of<br>increasing the rail modal share of port related traffic has<br>been undertaken. As a consequence the responsibility<br>and commitment to an assessment, and the necessity<br>for the application of feasible noise mitigation measures,<br>is not clear.                                                                                                                                                                                                                            |                   |      |
|                | <ul> <li>noise criteria;</li> <li>multi-pack container wagons, to reduce the extent of noise generated by stretching and bunching of the train;</li> <li>ECP braking technology to allow for smoother braking; and</li> <li>the use of hybrid locomotives for shunting.</li> <li>The DEC considers it would be appropriate to further assess the feasibility and reasonableness of using best-practice rolling stock to deliver improved noise outcomes, particularly given the extent of exceedances of PSNL and the current high levels of rail noise along the Botany to ILC rail corridor.</li> </ul>                                                                                                                                                   | Sydney Ports acknowledges DEC's concern, and in<br>response to this Sydney Ports is prepared to participate<br>in any interagency working group established to address<br>rail noise impacts along the dedicated freight line. It<br>should be noted that Sydney Ports, as a condition of<br>consent for the Port Botany Expansion project, has<br>established a Rail Noise Working Group to address<br>previously identified rail noise issues along the Freight<br>Line between Enfield and Botany Yard. This group<br>includes Sydney Ports, RailCorp, DoP, ARTC and<br>relevant councils and community members.<br>Consultation with relevant regulatory authorities<br>including DEC would also be undertaken. |                   |      |
|                | The statement of commitments for noise performance does<br>not include a commitment to achieve acceptable noise<br>levels at sensitive receiver locations, which, in this context<br>means achieving noise levels that substantially comply with<br>the Governments Industrial Noise Policy (INP). The NIA<br>has indicated that, under noise enhancing weather<br>conditions, that have been determined to be a significant<br>feature of the area, the proposal will generate noise levels<br>that significantly exceed the INP PSNL. The predicted<br>levels significantly exceed the levels that DEC would<br>normally license to. On this basis the statement of<br>commitments are not considered capable of delivering<br>acceptable noise outcomes. | Mitigation options were extensively reviewed as part of<br>the EA. It is considered that at this stage of the project,<br>when the design is still fairly flexible, all reasonable and<br>feasible mitigation measures have been considered to<br>reduce overall noise emissions from the site. Additional<br>mitigation will need to be considered at the design<br>phase to reduce noise levels to achieve compliance with<br>the PSNLs. After all additional reasonable and feasible<br>measures are incorporated into the design at the<br>DD/EMP phase (as set out in the RT&A Technical<br>Memo in Appendix E), it is expected that the PSNLs will<br>be achieved.                                            |                   |      |
|                | The DEC'S experience with similar infrastructure projects suggests environmental performance would be significantly enhanced by an independent performance monitoring and reporting process. To be most effective, the monitoring and reporting should inform and be integrated with the project's management decision making process.                                                                                                                                                                                                                                                                                                                                                                                                                      | This will be incorporated into the project's environmental management planning.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                   |      |

| Socio Economic | Health impacts of increased noise levels may include sleep<br>disturbance, annoyance, and speech and communication<br>interference and may in the longer term contribute to<br>cardiovascular disease and mental health problems. These<br>effects on the surrounding community, including sensitive<br>receptors such as homes, schools and hospitals, need<br>to be considered when assessing any development<br>application with the potential to increase noise levels.                    | Construction and Operational noise issues would be<br>addressed through the implementation of the noise and<br>vibration management plan.                                                                                                                                                                                                      | 833         | NSW Health<br>DoP Submission No 318 |
|                | To enable a full assessment of potential health impacts<br>from construction noise it would be useful to reassess the<br>predicted impacts at receptors by re-estimating with:<br>Suggested mitigation strategies<br>Noise impacts from buildings constructed onsite<br>(should stage 4 and stage 5 operate<br>concurrently)                                                                                                                                                                   | The construction noise assessment identified impacts<br>at stage when many assumptions were made about the<br>construction EMP. More detailed assessment would be<br>carried out as part of any Construction Noise MP. This<br>would take into consideration predicted noise levels with<br>mitigation measures.                               |             |                                     |
|                | It appears, from the traffic impact assessment, that access<br>to recreational and retail facilities and schools would not be<br>affected, however this has not been specifically addressed<br>in the EIS. Neither has there been identification of groups<br>particularly sensitive to increased traffic volumes (such as<br>children and the elderly) or the consideration of these<br>groups in terms of predicted effects on pedestrian safety as<br>a result of the proposed development. | Access to these facilities was not considered in detail as<br>traffic volumes attributable to the proposed ILC at these<br>locations was negligible. However, these issues would<br>be considered during preparation of the Local Area<br>Traffic Management Plan to ensure that traffic is not<br>significantly increased at these locations. |             |                                     |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | ID          |                                                |
| Traffic        | The construction traffic impact assessment concluded that<br>the proposed development will have a minimal impact<br>during the construction phase. There will, however, be an<br>increase in construction traffic of between 29 and 75<br>vehicles per day, and an estimated 150-170 staff vehicles<br>per day to and from the site. The potential for road<br>accidents is therefore present, and a comprehensive traffic<br>management plan ought to be developed to ensure that<br>road safety is optimised, as well as ensuring construction<br>and other associated traffic does not use local residential<br>streets. A Local Area Management Plan should be<br>developed in consultation with the local community and<br>school representatives to ensure that any additional traffic<br>that results from the proposed development does not<br>cause an increase in the number of accidents in the local<br>area. | A detailed Construction Traffic Management Plan will be<br>undertaken by the construction contractor following<br>approval to proceed. The traffic generated from the ILC<br>will use designated arterial road network and will not<br>access the local street network. There is a potential for<br>road accidents to occur as a result of the ILC. However,<br>the traffic from the ILC contributes to less than1% of the<br>overall traffic on the road network and therefore overall<br>improvements regarding road safety should be<br>considered with the RTA and the Councils. | 833         | NSW Health<br>DoP Submission No 318            |
|                | The EIS notes that public transport access to the site of the proposed development is poor. Consequently, there are potential benefits to be gained from exploring options such as the proponent providing regular transport to and from Strathfield, Lakemba or Belmore train stations, to encourage staff to use public transport.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Transport could be provided from local train stations to<br>the ILC. However – the majority of workers will be shift<br>workers. Shift 1 is 5am to 4pm and Shift 2 is 4pm to<br>3am. It is considered unlikely that employees would<br>utilise the rail network as there are few trains which<br>would potentially get employees to the origin train<br>stations in time to get to work. This situation can be<br>monitored and a plan could be prepared following a staff<br>survey of trip origin.                                                                                 |             |                                                |
|                | Minimise impact of ILC operational traffic on surrounding network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | This has been considered as part of the EA. The traffic from the ILC contributes to 1% of the overall traffic on the road network                                                                                                                                                                                                                                                                                                                                                                                                                                                    |             |                                                |
|                | Development of public transport strategy for staff to<br>improve access to the site Development of a Local Area<br>Management Plan in consultation with the local community<br>and school representatives with the objective of ensuring<br>local road safety.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | See above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |             |                                                |
| Traffic        | ILC traffic and transport will necessarily impact on bus<br>servicing. Time taken for heavy vehicles to move off from a<br>standing start will impact on delay experienced at signals,<br>while the length of some trucks and the volume of<br>additional vehicles will impact on the ability of buses to<br>move quickly from bus stops into the traffic stream.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | The INTANAL intersection modelling allows for the different characteristics of heavy vehicles and the effect that these have on traffic flow.                                                                                                                                                                                                                                                                                                                                                                                                                                        | 818         | Ministry of Transport<br>DoP Submission No 142 |
|                | While additional seconds of delay may not be considered significant for ordinary traffic, this is not the case for buses, which must be able to run reliable, fast services to maintain and increase patronage and hence maximise the return on investment to government.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The reported delay is the average for all vehicles that<br>pass through an intersection in a 1-hour period. Only<br>very large changes in delay would be noticed by most<br>individual vehicles.                                                                                                                                                                                                                                                                                                                                                                                     |             |                                                |

|                | During construction 'the main routes used for the<br>movement of key materials from the site would be via the<br>Hume Highway or via Roberts Rd' At peak activity, these<br>movements amount to more than 7 trucks an hour and with<br>staff traffic of 240 vehicles in the peak hour.          | The movement of all 240 construction staff is a peak<br>required for a period of approximately two months and is<br>a worst-case scenario. There will be a spread of arrivals<br>and departures and not all are anticipated to arrive in the<br>peak hour.                                                                                                                                                                                                                                                                                                                                                                                                                                            | <u> </u>      |                                                                                                                                          |
|                | Figure 7-5a shows the 2016, AM estimates. The biggest<br>impact is on Roberts Rd, where it appears that 82 ILC<br>heavy vehicles (HV) will access Wentworth St from Roberts<br>Road in the AM peak hour. 43 ILC HGVs will use the Hume<br>Highway/Centenary Drive intersection.                 | The 43 ILC heavy vehicles would pass over the top of<br>the intersection, rather than contribute to delays at the<br>signals. There would be 19 ILC heavy vehicles moving<br>between Roberts Road and Hume Highway west of<br>Roberts Road.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |               |                                                                                                                                          |
|                | Summary:<br>The Roberts Rd/Juno Pde and Roberts Rd/Centenary<br>Drive/Hume Highway intersections will require work to<br>ensure bus priority.                                                                                                                                                   | These works will be required without the ILC being developed and should be discussed between the Ministry of Transport, RTA and Councils.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |               |                                                                                                                                          |
|                | While the ILC does not appear to show a great impact on<br>the Hume Hwy or on the Hume Hwy/Coronation Pde<br>intersection, this would need to be monitored.                                                                                                                                     | SPC will keep records of truck movements from the ILC outbound from the Cosgrove Rd access point during morning and evening peaks. Intersection monitoring is the responsibility of relevant Government agencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |               |                                                                                                                                          |
|                | Heavy vehicles on Roberts Rd is a significant issue for bus servicing.                                                                                                                                                                                                                          | The INTANAL intersection modelling allows for the different characteristics of heavy vehicles and the effect that these have on traffic flow.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |               |                                                                                                                                          |
|                |                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |               |                                                                                                                                          |
| Traffic        | One-way pair option to be carried out for Cosgrove Road                                                                                                                                                                                                                                         | Providing access to the ILC via Gould Street has been<br>examined by SPC previously (for a larger proposed<br>development with a different layout and business<br>model), and was found to be unworkable.<br>However, purely from a traffic perspective, SKM have<br>examined the RTA's proposal in SCATES, using only<br>Hume Highway / Cosgrove Road flows (no data is<br>available on volumes at the Gould Street intersection).<br>Subject to the limitations of this approach, we found that<br>operation under current volumes would be acceptable at<br>both intersections. However in the future eastbound<br>widening of the Hume Highway would be required even<br>without the ILC traffic. | Not allocated | Comments from Attachment 1 – RTA<br>Comments on Environmental Assessment<br>Report Traffic Generation Impacts of the<br>Current Proposal |
|                | Truck movements in a typical morning peak hour are<br>estimated assuming that 85% of truck activity occurs on<br>weekdays, and 7.5% to 8.6% of those daily movements are<br>in the morning peak hour. The Port Botany EIS reported<br>about 8.2% of container truck movements (240 out of 2913) | The daily profile was estimated based on the Port of<br>Melbourne, which has a similar operating profile to that<br>proposed. The 22-hour operation of the ILC allows the<br>peak hour impact to be less than would otherwise be<br>expected i.e. through spread of traffic movements.                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                          |

|                | in the peak                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                   |      |
|                | Total truck movements are predicted to be 88 per hour in<br>the morning peak (an independent calculation using the<br>parameter values reported in the EA produced 90<br>movements per hour). If current (2001) parameters were<br>adopted for container transport, and a load factor assumed<br>to be 7 tonnes of loose freight per truck, 128 movements<br>per hour would be predicted                                                                                                                                                                                                                                                                                                                                     | The difference between 88 and 90 may be due to<br>rounding. The 2 vehicle difference would make a very<br>small impact on the findings of the EA.<br>We used the latest available (2004/5) data from SPC<br>regarding container weights and the 20ft vs 40ft<br>container ratio. These were verified as appropriate by<br>SKM.                                                                                                                                                                                                                                                                                                                                |                   |      |
|                | Figures 4.3 and 4.4 and Tables 4-4 and 4-5 of Volume 2<br>show the peak hour traffic impacts of the proposals at a<br>very limited set of locations, and do not give a clear picture<br>of how the generated traffic disperses through the<br>surrounding road network. More detailed plots of the<br>modelled traffic flows are needed                                                                                                                                                                                                                                                                                                                                                                                      | The plots provided in the EA account for the vast<br>majority of ILC trucks. Beyond the immediate area the<br>number of trucks is negligible. The study area was<br>agreed between SPC and RTA representatives.                                                                                                                                                                                                                                                                                                                                                                                                                                               |                   |      |
|                | These tables and plots show the truck and car movements<br>generated by the site, but do not provide any details of the<br>truck movements in the background traffic stream. Their<br>impacts are dismissed with the statement that "the absolute<br>number of heavy vehicles is small (generally less than<br>1% of total traffic)". The percentage increase in truck<br>numbers would be substantially higher.                                                                                                                                                                                                                                                                                                             | The truck numbers are shown in the figures.<br>The percentage increase in truck numbers would be<br>higher due to the smaller base, even if the real increase<br>is small.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                   |      |
|                | For example, Table 4-4 shows an increase of 10+9=19 trucks in the AM peak hour on the Hume Highway west of Centenary Drive. This is an increase of 0.3% on the background traffic flow of 4038+2747=6785. However this section of the Hume Highway carried 9.1% heavy vehicles in 2002. That suggests that background truck volume might be around 600 trucks per hour and the Enfield traffic represents 3% increase in truck volumes.                                                                                                                                                                                                                                                                                      | Figures 7-5a and 7-5b show the total number of heavy vehicles as well as the number related to the ILC. For example, on Roberts Road south of Norfolk Road, there would be over 200 heavy vehicles in each direction during the AM peak hour, with the ILC contributing about 6% (12 northbound and 14 southbound). On the Hume Highway, there are about 700 heavy vehicles in the AM peak hour, with the ILC contributing 2.7% (10 eastbound and 9 westbound). These hourly volumes of ILC trucks are small compared with the base flows.                                                                                                                    |                   |      |
|                | <ul> <li>A key argument in the EA is that critical intersections will be over-saturated by 2016, without any additional traffic generated by the Enfield development, and therefore upgrading works should be the RTA responsibility (Section 4.4, Volume 2 refers)</li> <li>Table 4.4 lists modelled link flows, some of which show surprisingly high growth between 2005 and 2016. A comparison with the RTA standard models is tabulated below</li> <li>Table shows</li> <li>Boronia Road East of Hume Highway. EA growth of 5.5% and RTA growth of 0.5% p.a.</li> <li>Hume Highway West of Centenary. EA growth of 1.9% and RTA growth of 0.5% p.a.</li> <li>Hume Highway East of Cosgrove. EA growth of 2.2%</li> </ul> | Traffic on these roads would include not only local traffic<br>but also through traffic (especially on the Hume<br>Highway). There may also be switching to roads like<br>Boronia Road due to congestion on other links in the<br>network. Thus the growth rate on individual links may<br>be higher than the growth in surrounding land use might<br>indicate.<br>Although RTA growth on Boronia Rd is low compared<br>with EA, RTA's base volume is well in excess of<br>observed volumes (around 430 EB and 480 WB during<br>AM peak). The RTA's 2016 volumes exceed the EA<br>forecast also, suggesting that maybe the growth has<br>been underestimated. |                   |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Stakeholder<br>ID | Name |

|                | It appears that the above intersections along Roberts Road<br>have been analysed individually without the linking of cycle<br>times. A better analysis of the operation of these<br>intersections would have been provided using other<br>models (eg SCATES) which provides for the co-ordination<br>of the traffic signals in the area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Modelling of the Roberts Road intersections in SCATES<br>was not completed for the following reasons:<br>* The distances between the intersections (eg 580m<br>between Norfolk Road and Amarina Ave) are such that<br>arrival patterns would be fairly random, a situation with<br>which INTANAL is best suited. However it is noted the<br>SKM results along Roberts Road are similar to the<br>RTA's analysis of intersection performance.<br>* Smaller intersections that would be only marginally<br>affected by ILC traffic, such as Amarina Avenue and<br>Rawson Road, have not been modelled as part of the<br>EA. |                   |      |
|                | Planning Issue                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                   |      |

|                | A development proposal has come to the RTA for<br>comment. The site is the parcel of land fronting the Hume<br>Highway and extending from Cosgrove Road to Gould<br>Street with Gill Lane being parallel to the Highway. An<br>'Oporto Chicken' outlet and tile showroom are proposed.<br>If widening of Cosgrove Road and Hume Highway is<br>recommended for a left turn lane out of Cosgrove Road, it<br>would be necessary to immediately reserve the required<br>strip so that any proposed development on the site can be<br>constructed behind the reservation. | Noted.<br>The upgrade to this intersection is required in the future<br>even without the ILC. The left turn lane out of Cosgrove<br>Road is not an essential upgrade to improve intersection<br>operation. The key component is the eastbound<br>widening for 3 lanes.<br>Adoption of the One-way pair option may affect traffic<br>and access assumptions of the development proposal. | <u>U</u>    |      |
|                | Summary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                         |             |      |
|                | In the RTA's view – some of the assumptions in the EA are<br>optimistic. The rate of development growth is not<br>anticipated to be as high as that proposed.                                                                                                                                                                                                                                                                                                                                                                                                         | Traffic growth may be greater than local development growth on certain roads due to through traffic, and switching away from congested routes.                                                                                                                                                                                                                                          |             |      |
|                | Nor is the degree of backloading likely to rise from the current 8% to 30% without significant improvements to goods handling in the industry and / or technological innovation                                                                                                                                                                                                                                                                                                                                                                                       | 30% backloading was accepted for use in the Port<br>Botany EIS. This target is expected to be reached at<br>Enfield due to an increase in multiple vehicle trip cycles,<br>and the multiple and complementary container business<br>types on site.                                                                                                                                      |             |      |
|                | Over time, the number of B-doubles accessing the site is<br>expected to increase. This may reduce total number of<br>heavy vehicles accessing the site                                                                                                                                                                                                                                                                                                                                                                                                                | An increase in B-double use may reduce total traffic generation, although the impact of a smaller number of larger vehicles is likely to be similar to the stated impacts.                                                                                                                                                                                                              |             |      |
|                | The key intersections still have some capacity (with the exception of Punchbowl Road / King Georges Road) but without detailed SCATES modelling it is difficult to determine best operating options for these intersections                                                                                                                                                                                                                                                                                                                                           | We consider that the INTANAL analysis presented is<br>sound for the purposes of evaluating intersection<br>performance. The SKM traffic assessment provided<br>comparable current intersection performance to the<br>RTA assessment.                                                                                                                                                    |             |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Response                                                                                                                                                                                                                                                                           | Stakeholder | Name                                                        |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------------------------------------------------------|
|                | Provided the appropriate widening and roadworks are<br>carried out, access to the site via Cosgrove Road and<br>Norfolk Road is considered to be less detrimental to traffic<br>flow than if Cosgrove Road remains a two-way road. While<br>the one-way pair option of Cosgrove Road and Gould<br>Street was dismissed earlier in the study, it should be<br>re-examined as it has several benefits. It is thought that a<br>SCATES analysis would show traffic signals operating<br>more efficiently at the 2 intersections with the Hume<br>Highway. | See previous comment                                                                                                                                                                                                                                                               | <u> </u>    |                                                             |
|                | It would also allow retention of on-street parking on<br>Cosgrove Road, something all the industries were adamant<br>about.                                                                                                                                                                                                                                                                                                                                                                                                                            | Agree that this would be a benefit of the one-way pair<br>option. It should also be noted however that the current<br>ILC proposal for using Cosgrove Road as a second<br>access does not limit on street parking.                                                                 |             |                                                             |
|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                    |             |                                                             |
| Traffic        | Following the RTA's initial submission to the Department of<br>Planning on the Environmental Assessment for the above<br>proposed Centre (dated 2/3/06), the RTA has undertaken<br>further work in investigating the performance of key<br>intersections surrounding the proposed Enfield Intermodal<br>Logistics Centre (ILC). These are detailed below along<br>with costing of necessary works and some<br>recommendations on heavy vehicle compliance and<br>enforcement requirements.                                                             |                                                                                                                                                                                                                                                                                    | 860         | Roads and Traffic Authority<br><b>DoP Submission No 321</b> |
|                | 1. Modelling Results Using "SCATES"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                    |             |                                                             |
|                | The RTA has undertaken detailed modelling of the road<br>network surrounding the Enfield site using SCATES model<br>and has concluded that the SKM traffic analysis was not<br>comprehensive enough to indicate the operational<br>performance of linked intersections along Roberts Road<br>and also along Hume Highway.                                                                                                                                                                                                                              | Noted. SKM did not analyse the linked junctions as it<br>was considered that the junctions could be assessed as<br>stand-alone junctions. The key reason being the<br>distance between the respective intersections. The<br>analysis undertaken by SKM is considered to be robust. |             |                                                             |
|                | The RTA has investigated a number of options to improve<br>the current and future performance of the following key<br>intersections using its SCATES model:<br>Cosgrove Road/Hume Highway<br>Roberts Rd/Norfolk Rd<br>Hume Highway/Roberts Rd/Centenary Drive                                                                                                                                                                                                                                                                                          | Noted.                                                                                                                                                                                                                                                                             |             |                                                             |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Response                                                                                                                                                                                                                                                    | Stakeholder | Name |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|------|
|                | <ul> <li>Roberts Rd/Juno Parade</li> <li>Centenary Drive/Arthur St</li> <li>Hume Highway/Gould St (proposed new traffic signal site)</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                             |             |      |
|                | The modelling results show that any additional loading of<br>heavy vehicles on the road network will adversely impact<br>on the operational performance of the above intersections<br>both in the construction phase and by 2016. Even though<br>the number of heavy vehicles are relatively small compared<br>to the total traffic volumes our modelling shows their<br>impacts are significant.                                                                                                                                                                                                                                   | SKM analysis shows that the development does not<br>have a significant impact on the performance of the<br>intersections. This is documented in the EA.                                                                                                     |             |      |
|                | Our modelling also shows that the operational performance<br>of the road network will be improved with a one-way pair<br>option using Cosgrove Rd/Gould St.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | SKM modelled the one-way pair subsequent to the submission of the EA. The intersection of Cosgrove Road / Hume Highway is improved by the one-way pair in the short term.                                                                                   |             |      |
|                | Cosgrove Rd/Hume Highway<br>We agree with the SKM analysis that this intersection<br>needs upgrading. However, the operational performance<br>of this and other intersections along the Hume Highway<br>would be improved by a one-way pair option by making<br>Cosgrove Rd (south bound) and Gould St (northbound) as<br>a one-way pair. The total cost of works required at this<br>intersection is estimated at about \$3m.                                                                                                                                                                                                      | In the short term the performance of this intersection will<br>improve. However, wider network issues still need to be<br>taken into consideration.                                                                                                         |             |      |
|                | Sydney Ports Corporation (SPC) claim that this entry/exit<br>point at Cosgrove Rd would only be used by a small<br>number of heavy vehicles to access the Intermodal<br>Logistics Centre (ILC). The RTA is, nevertheless,<br>concerned that additional vehicles from the ILC will impact<br>the intersection. In view of the cost involved in upgrading<br>this intersection it was agreed that SPC would submit, for<br>consideration by the RTA, measures to limit the number of<br>heavy vehicles from using Cosgrove Rd as an entry/exit<br>point. This may obviate the need to upgrade this<br>intersection in the short term. | SPC will submit for consideration of the RTA, measures<br>to limit the number of B-doubles leaving from the ILC via<br>Cosgrove Road during AM & PM peak periods.                                                                                           |             |      |
|                | Roberts Rd/Norfolk Rd<br>This intersection performs adequately now. However, with<br>the ILC in place there would be a need to upgrade this<br>intersection to accommodate 26m B-Double turning<br>movements into/out of Norfolk Rd onto Roberts Rd for both<br>physical turning capacity and safety reasons. The cost of<br>these works is estimated at about \$3.6m. SPC have<br>agreed to pay for these works.                                                                                                                                                                                                                   | SPC is committed to improving the layout of this junction<br>in consultation with the RTA to enable improved access<br>for B-doubles at this point. A breakdown of the costs has<br>not been undertaken. This will be undertaken during<br>detailed design. |             |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                        | Response                                                                                                                                                                                                                                                                                                                                                                                     | Stakeholder<br>ID | Name |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|------|
|                | 2. Local Area Traffic Management (LATM)                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                              |                   |      |
|                | The area bordered by Roberts Road, Hume Highway and Juno Parade is predominantly residential, containing a number of schools. For this reason it is important that heavy vehicle movements associated with the ILC be constrained to the major road network and not travel through residential areas when travelling to or from the ILC.        | The movement of ILC trucks through the residential area will be restricted and managed through LATM measures to be undertaken in consultation with the RTA and Council.                                                                                                                                                                                                                      |                   |      |
|                | A range of traffic management measures will be required in<br>the area to ensure that these movements are deterred,<br>while still allowing access by residents and minimal impact<br>on existing bus routes. While detailed design of these<br>measures has not been undertaken, it is anticipated that up<br>to \$1 million will be required. | Costing of LATM measures has not been undertaken.<br>The key measure is the redesign of Roberts Road /<br>Norfolk Road intersection to prevent vehicles from<br>accessing the residential areas. The possible movement<br>of ILC trucks through the residential area will be<br>restricted, and managed through LATM measures to be<br>undertaken in consultation with the RTA and Councils. |                   |      |
|                | 3. Costing of Required Road Works                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                              |                   |      |
|                | The RTA currently does not have any plans or funds<br>available for future widening of the Hume Highway at<br>Cosgrove Rd or at the other intersections mentioned above<br>for the foreseeable future.                                                                                                                                          | Noted.                                                                                                                                                                                                                                                                                                                                                                                       |                   |      |
|                | The ILC will be severely constrained in its operational performance if the intersection improvements are not made during the construction phase of the ILC. Improvements will be required at the key intersections of Roberts Rd/Norfolk Rd as well as at the Hume Highway/Cosgrove Rd intersection if the ILC is to perform adequately.        | It is not considered that the ILC will be severely<br>constrained in its operational performance if the<br>improvements are not made during the construction<br>phase of the ILC. However, SPC will undertake to<br>improve the junction of Roberts Road / Norfolk Road at<br>this stage. No improvements are considered at the<br>Hume Highway / Cosgrove Road intersection.                |                   |      |
|                | The total cost of intersection improvements and the cost of<br>the Local Area Traffic Management (LATM) measures is of<br>the order of \$35m. The costs of the improvements are<br>summarised below.                                                                                                                                            | The total costs of any improvements to be undertaken will be subject to detailed design.                                                                                                                                                                                                                                                                                                     |                   |      |
|                | <ul> <li>Hume Highway/Cosgrove Rd (one-way pair option of Cosgrove Rd and Gould St including pavement reconstruction on Hume Highway) - \$31m (est. cost)</li> <li>Roberts Rd/Norfolk Rd (safety improvements) - \$3.6m (est. cost)</li> <li>LATM - \$0.5-\$1.0m (est. cost)</li> </ul>                                                         | Noted that these are RTA estimates only.                                                                                                                                                                                                                                                                                                                                                     |                   |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Response                                                                                                                                                             | Stakeholder<br>ID | Name |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|------|
|                | The above costs are strategic estimates only without any detailed concept plans. As previously estimated the bulk of this cost is for the Cosgrove Rd/Hume Highway intersection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Noted. Improvements at this intersection is not<br>necessary due to the ILC. SPC will monitor the number<br>of heavy vehicles from the site using this intersection. |                   |      |
|                | The RTA would not be improving these intersections for the foreseeable future and if they are required to be brought forward to meet the needs of the ILC then it is appropriate that the developer contribute to the cost of the works. This is a matter for discussion and negotiation with the proponent.                                                                                                                                                                                                                                                                                                                                                                                    | Noted.                                                                                                                                                               |                   |      |
|                | 4. Compliance and Heavy Vehicle Regulations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                      |                   |      |
|                | Access<br>B-Double trucks will be in operation to and from the site. In<br>planning access to and around the site consideration must<br>be given to the Road Transport (General) Act 2005 General<br>B-Double Notice under Division 4 of Part 2 of the Road<br>Transport (Mass, Loading and Access) Regulation, 2005.<br>This Regulation specifies the areas and routes on which<br>B-Doubles may be used and any restrictions on usage.<br>The access routes proposed are contained within the<br>Regulation; however there are restrictions on some of the<br>roads proposed, particularly in relation to Norfolk Road and<br>Cosgrove Road. These must be observed in the planning<br>phase. | Noted.                                                                                                                                                               |                   |      |
|                | The access routes to the site should be assessed for any potential access issues for oversize vehicles greater than the standard 4.3m height dimension, specifically vehicles up to 4.6m height.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Noted.                                                                                                                                                               |                   |      |
|                | Consideration should also be given to the rules relating to<br>Higher Mass Vehicles. Please refer to Road Transport<br>(Mass, Loading and Access) Regulation 2005 Higher Mass<br>Limits Routes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Noted.                                                                                                                                                               |                   |      |
|                | The construction of a new road bridge is included in the proposals. Construction planning will need to take into account the potential vehicle mass and the vehicle configuration using the infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Noted.                                                                                                                                                               |                   |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Response                                                                                                                                                                                              | Stakeholder<br>ID | Name |

|                | Mass and Compliance<br>The RTA notes that the site management traffic plan will<br>include compliance with safe load practices and address<br>vehicle weight-of-load thresholds on the road network in<br>accordance with the Road Transport (General) Act, 2005.<br>The RTA recommends appropriate compliance systems<br>are incorporated into the ILC to assist all parties with<br>compliance, for example, mechanisms for checking the<br>gross combination mass of the vehicles. Consideration<br>should also be given to putting in place mechanisms to<br>allow over mass containers to be broken down to compliant<br>levels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Noted.                                                                                                                                                                                                |                   |      |
|                | The RTA welcomes measures to ensure that heavy<br>vehicles travelling to and from the ILC use appropriate<br>routes and do not travel through residential areas. The<br>RTA is happy to be consulted during the development of<br>Local Area Traffic Management (LATM) measures,<br>particularly in relation to speed zoning, noise reduction and<br>emissions management.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Appropriate LATM measures will be considered to<br>prevent heavy vehicles from the ILC using residential<br>streets to access the arterial road network. 3-tonne load<br>limits are already in place. |                   |      |
|                | <ul> <li>Parking The report states that likely number of parking spaces should be based on the anticipated number of employees on the site. It is acknowledged that parking arrangements for trucks and cars on site will be addressed as part of the detailed design of the project. The RTA recommends that the following issues are taken into account for the parking arrangements for trucks:  <ul> <li>Capacity to part trucks determined by their dimensions (noting that it is anticipated that the facility will be accessed by B-Doubles).</li> <li>The volumes of trucks accessing the site and at peak times – it will be important that the queuing and parking facilities are of sufficient capacity so that compliance with the prohibition from using local roads can be observed at all times.</li> <li>Turning paths for trucks to facilitate movement around parking areas and the site. </li> <li>Consideration given to the community parking and access requirements for the community recreation and ecological areas to ensure their separation from trucking activities.</li> </ul></li></ul> | Noted.                                                                                                                                                                                                |                   |      |
|                | Queuing<br>The report estimates that during the peak of activity, there<br>will be about 52 truck arrivals in a one-hour period entering<br>the site. Each truck, upon arrival at one of the access<br>points, will travel to the relevant facility in the site. All traffic<br>will be accommodated on-site and managed by traffic<br>management plans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Noted                                                                                                                                                                                                 |                   |      |

| Issue Category | Comments                                                                                                                                                                                                                                                                                                                                                                           | Response | Stakeholder<br>ID | Name |

# Appendix E Traffic Modelling Technical Report

# 1 Traffic Modelling

#### 1.1 Introduction

SKM were requested to re-calibrate both the AM and PM peak models, to provide a better statistical fit and to increase acceptance against the calibration criteria as set out in the UK Design Manual for Roads and Bridges. These criteria and the results are shown in **Appendix A**.

SKM were also requested to assess the data against 2002 screenline counts. This analysis is shown in **Section 1.4** and **Appendix A.2**.

For ease of comparison, the following sections of this note have been replicated from the relevant sections of the Transport Working Paper, contained as Appendix B of the Environmental Assessment.

These recalibrated models have been reviewed, and are suitable for use in the transport assessment of the Intermodal Logistics Centre at Enfield. They confirm the level of base network activity and the marginal impact that the ILC will have on the surrounding traffic.

#### 1.2 Road Network Link Capacity Assessment

Based on the re-calibrated AM and PM network modelling results, an assessment of the road link capacity was undertaken. Link capacity refers to the ability of a road to cater for demand at midblock (between intersections) locations, and is a factor of the number of lanes, type of road, and adjacent development. Theoretical link capacities have been estimated for key roads in the study area. The results in **Table 1-3** show that in 2005, roads such as the Hume Highway are at or approaching their theoretical capacity, represented by a degree of saturation of 0.9 or greater (the practical capacity of a link, when traffic flow begins to break down, is typically around 90% of the theoretical capacity). In the 2016 base case, the Hume Highway is the most saturated link and is anticipated to be operating within its theoretical capacity both with and without Enfield Intermodal Logistics Centre in place.

The impact of the Enfield Intermodal Logistics Centre on link capacity, is a marginal change in degree of saturation. Roads such as Cosgrove Road and Wentworth Street, experience a relatively large increase in degree of saturation compared with other roads. This is due to the smaller base volume of traffic on these roads, resulting in a larger proportional increase in traffic, although the absolute increase is small. These links were chosen to represent the immediate boundary of the study area, as it will be these locations where the maximum impact occurs (see **Table 1-1** and **Table 1-2**). The AM and PM 2005 and 2016 traffic volumes are shown in **Figure 1-1** and **Figure 1-2** respectively. These have been replicated and amended from **Figure 4-3** and **Figure 4-4** of the Transport Working Paper.

#### Table 1-1 Modelled Future Traffic Volume AM Peak – All Vehicles

#### 1.3 Intersection Assessment

The operation of key intersections within the identified study area has been assessed both with and without an Enfield Intermodal Logistics Centre for the year 2016. Input to the INTANAL models for each intersection were modelled flows extracted from the NETANAL model. Traffic volumes and turning movements were extracted from the network model for intersections identified as critical to the evaluation of the impact of the ILC. These intersections had also been surveyed. Due to the aggregated nature of travel zones and the consequential simplification of intersection traffic, the difference between actual and modelled traffic movements are identified. These are used to adjust forecast traffic movements using an iterative process to increase confidence in the calibration of the network model.

The results of the intersection assessment are presented in Table 1-4.

#### Table 1-4 Future Intersection Operation

**Table 1-4** shows that background growth in traffic to 2016 would result in several intersections operating at an unsatisfactory level of service. It also shows that there is very little difference in intersection operation in 2016, when comparing with and without Enfield Intermodal Logistics Centre scenarios. Saturated intersections include Roberts Road / Juno Parade, King Georges Road / Punchbowl Road, Hume Highway / Roberts Road / Centenary Drive, Hume Highway / Coronation Parade and Hume Highway / Cosgrove Road. These intersections would be saturated in 2016, with or without the Enfield Intermodal Logistics Centre.

#### 1.3.1 Hume/Cosgrove Intersection

The Hume Highway / Cosgrove Road intersection is forecast to operate at Level of Service F in the future, regardless of any development of the ILC. The link capacity assessment (**Table 1-3**) also shows that this section of the highway would be congested in the future, regardless of the ILC. Based on this forecast, widening of this section of the Hume Highway would be recommended and would improve intersection operation. With three through lanes provided in each direction on the Hume Highway, the Level of Service would improve to LoS"B" in the AM Peak and LoS"C" in the PM peak. This configuration would also be suitable for the forecast traffic with the proposed Enfield Intermodal Logistics Centre in operation. See **Table 1-4**.

Although the main site access point would be via Wentworth Street, up to 25% of trucks are assumed to use the Cosgrove Road site access. As a sensitivity test, assessment of the Cosgrove /Hume Highway intersection with various levels of truck activity via Cosgrove Road was undertaken. If 100% of truck activity were via Cosgrove Road, then operation of the upgraded intersection (with 6 lanes on the Hume Highway) would only marginally exceed the threshold for Level of Service "E". With 50% of ILC truck activity via Cosgrove Road, the Level of Service was only marginally above the threshold for "D". However, the anticipated level of truck activity via Cosgrove Road is much less than this, and the intersection is therefore expected to operate at a satisfactory level of service in the majority of instances of upgrades.

The proponent has proposed to restrict egress outbound from the ILC onto Cosgrove Road during commuter peak periods to limit the impact on the intersection with the Hume Highway. This commitment will be declared in the proponent's Preferred Project Report.

## 1.3.2 Roberts/ Norfolk Intersection

From a traffic volume perspective, the Roberts Road / Norfolk Road intersection is operating with spare capacity and no intersection enhancement is required. However, intersection geometry will require alteration in agreement with RTA to better provide for movement of articulated vehicles and enhanced visibility. This commitment will be declared in the proponent's Preferred Project Report.

## 1.4 Regional Impact Zone

To assess the likely impact of the Enfield ILC on regional traffic, traffic volumes were extracted from the network model along recognised RTA screenlines to the east of the ILC (between the ILC and Port Botany) and to the west of the ILC. The easterly screenline will be affected by the changes in traffic resulting from the transfer of container activity from Port Botany to Enfield. However, the western screenline is between the ILC and its target market. These screen lines are depicted in **Figure 1-3**.

#### Figure 1-3 Screenline Location

Of critical importance is whether the presence of ILC traffic causes any route significant switching on screenline routes, albeit that they are remote from the development site.

Traffic volumes are reported in Table 1-5 and Table 1-6.

SK

It will be noted that the highest relative change is 5% (in the AM Peak) and is equivalent to only 83 vehicles.

A further comparison between the modelled volumes for the 2016 base and the 2016 with ILC scenarios along these combined screenlines indicates that they are statistically identical for both the AM and the PM peaks. This is based on the standard GEH statistical thresholds used in the model calibration (see **Appendix A**). This indicates 100% of the screenline links comply with the threshold GEH values and 100% of the links comply with the absolute difference threshold.

As such, it must be concluded that the Enfield ILC has no significant regional impact.

#### Table 1-5 Screenlines 1 and 5&7 AM Peak Traffic volumes with & without ILC

C:\!Working\SKM\INFR\Projects\EN01709 Enfield\[EN01709 - Screenline Analysis - x05!.xls]PM

It should be noted, with reference to the Director-General Requirements that the low volumes of heavy vehicles generated by the Enfield ILC indicate that no dedicated infrastructure is required to support a stand-alone road freight corridor for the movement of heavy vehicles from the site.

## Appendix A Model Verification

#### A.1 **CALIBRATION IN STUDY AREA**

The statistical measure of the suitability of this model is taken from the UK Design Manual for Roads and Bridges (Volume 12, Section 2, Part 1 Traffic Appraisal of Roads Schemes -Traffic Appraisal in Urban Areas Assignment Validation: Acceptability Guidelines). These criteria are described below:

Statistic 1: GEH Statistic: less than 5 for greater than 85% of cases

Statistic 2:

1) Individual flows within 15% for flows 700-2,700vph

2) Individual flows within 100vph for flows < 700vph > greater than 85% of cases

*3)* Individual flows within 400vph for flows >2,700vph

The GEH Statistic (a form of Chi-squared statistic) is given by the formula:

GEH = 
$$\sqrt{\frac{(M-C)^2}{(M+C)/2}}$$

Where: GEH is the GEH statistic

- Μ is the modelled flow; and
- С is the observed flow.

The results of the calibration process are shown in the tables below for the AM and PM peak.

### AM Peak Re- Calibration Results – All Vehicles

| Street Name           | Location                  | Direction  | Actual<br>Volume | Modelled<br>Volume | GEH<br>Statistic |

| Wentworth Street      | E of Roberts Road         | Northbound | 153              | 148                | 0.41             |
| Wentworth Street      | E of Roberts Road         | Southbound | 67               | 74                 | 0.83             |

The 2005 base model achieved the following results:

## AM Peak Hour

- Statistic 1: The GEH statistic was less than 5 for 89% of cases
- Statistic 2: Individual flow criteria was satisfied in 94% of cases

## PM Peak Hour

- Statistic 1: The GEH statistic was less than 5 for 94% of cases
- Statistic 2: Individual flow criteria was satisfied in 100% of cases

Both the AM Peak and PM Peak are consistent with the count data and this level of calibration is acceptable.

In addition to the re-calibration of the total hourly flow during the AM peak period and PM peak period, the heavy vehicle matrix was also re-calibrated within the study area. The results of the heavy vehicle calibration process (modelled vs actual flows) are shown in the tables below for the AM and PM peak periods.

The 2005 base model achieved the following results for heavy vehicles:

AM Peak Hour

- Statistic 1: The GEH statistic was less than 5 for 89% of cases
- Statistic 2: Individual flow criteria was satisfied in 100% of cases

#### PM Peak Hour

- Statistic 1: The GEH statistic was less than 5 for 100% of cases
- Statistic 2: Individual flow criteria was satisfied in 100% of cases

Both the AM Peak and PM Peak are consistent with the count data and this level of calibration is acceptable.

## A.2 CONSIDERATION OF REGIONAL SCREENLINE DATA

The traffic assessment for the ILC has been focussed on the immediate area of impact of traffic generated from the proposed development. This has been done due to the low peakperiod level of traffic generated by the ILC, in comparison with regional traffic, and the ready dissipation of that low volume onto the regional network.

The level of generated traffic from the development is substantially less than can be reasonably identified in a regional network model. Calibration therefore focused on the local area network surrounding the ILC.

Cross-regional calibration is usually required when significant infrastructure or traffic generation is anticipated, neither of which are pertinent to the ILC proposal.

At the request of IHAP, regional screenline data was sought from the Roads and Traffic Authority for 2005 to confirm the goodness-of-fit of the calibrated model to regional traffic volumes. The RTA has advised SPC that this data has not been fully validated and is not available at the time of writing this memorandum.

In this regard, published 2002 screenline data was compared with modelled 2005 traffic volumes to identify regional traffic growth (see tables below). This data is somewhat incomplete, because published data for the M5 and M4 is not available, as these are private motorways and are significant east/west arterials in the ILC region, although not the vicinity. For RTA's Screenlines 1 and a combination of 5 and 7 (see **Figure 1-3**) growth between published 2002 and modelled 2005 was ~2% per year. This is consistent with regional growth expectation in the form of key indicators published by Transport and Population Data Centre<sup>1</sup> which indicated 2% pa growth 1999-2002, with increasing growth of 3% pa 2001-2002.

Of additional imperative is assessment of changes in network and landuse profile that would affect the validity of the base model. While the model relates to 1999 forecasts, it does reflect updated network infrastructure, and the landuse profiles in the subregion have not changed.

As such, it is contended that:

- the calibrated model is appropriate for the local impact assessment;
- given that the scale of traffic generated from the development is small in comparison with surrounding traffic activity, the critical calibration endeavour must focus on local issues, and cross-regional traffic calibration is a lesser concern;
- published screenline data for 2002 is incomplete as it does not include major cross regional links in the M4, M5 and M5 east; and
- regional traffic growth embodied in the calibrated model is entirely consistent with anticipated regional growth.

# Appendix G Construction Phase PM<sub>10</sub> Impacts

## **TECHNICAL MEMORANDUM**

Matt Davies

10 March 2006

This memo describes the results of  $PM_{10}$  modelling of the construction phase impacts. The result show  $PM_{10}$  impacts for construction scenarios 1 and 2 and key results are shown for receptors R1, R2 located to the south-east of the ILC and R5 which is located to the north-west.

The results show time traces of 24-hour  $PM_{10}$  impacts including both background  $PM_{10}$  concentrations and impact levels added to the background.

The modelling scenarios are the same as those described in the EA and assume a wind speed restriction of 5 m/s, however, the wind direction restriction of 210 - 340 degrees has not been applied to these specific results, in order to show the key wind direction and times of the year when most significant impacts are likely to occur.

The results for construction scenario 1 are shown in **Attachment A** and results for scenario 2 are shown in **Attachment B**.

With respect to both construction scenarios it can be seen that for receptors R1 and R2 located to the south-east, impacts which cause exceedance of the  $50 \,\mu g/m^3$  criteria, generally occur between the months of May and December. This is considered to be associated with west and north-west winds which prevail during this time of the year.

Alternatively at receptor R5 located to the north-west the greatest impacts occur during the months of January to April, corresponding to the prevailing south-east winds at this time of the year.

It can be observed from the data it is really only receptor R1 that sees more than a few exceedances of the relevant criteria. At receptor R2 which is only a marginal distance away from the ILC site, there are only isolated exceedances of the criteria predicted to occur.

In terms of managing dust impacts associated with construction, it is probable that the scheduling of specific works at various times of the year will assist in managing offsite impacts. Specifically avoiding bulk earthworks on the southern end of the site during the period May to December would mitigate the exceedances presented in the assessment, as would avoiding bulk earthworks at the northern end of the site during the period January to April, however, this is considered less important.
